Introduction to Holomorphic Functions of Several Variables, Volume II R.C. Gunning, 2018-05-02 Introduction to Holomorphic Functions of Several Variables Volumes 1 111 provide an extensive introduction to the Oka Cartan theory of holomorphic functions of several variables and holomorphic varieties Each volume covers a different aspect and can be read independently **Singularities, Part 2** Peter Orlik, American Mathematical Society, 1983 On April 7 10 1980 the American Mathematical Society sponsored a Symposium on the Mathematical Heritage of Henri Poincaré held at Indiana University Bloomington Indiana This work presents the written versions of all but three of the invited talks presented at this Symposium It contains 2 papers by invited speakers who are not able to attend **Introduction to Holomorphic Functions of Several Variables, Volume I** R.C. Gunning, 2018-05-02 Introduction to Holomorphic Functions of Several Variables Volumes 1 111 provide an extensive introduction to the Oka Cartan theory of holomorphic functions of several variables and holomorphic varieties Each volume covers a different aspect and can be read independently **Proceedings of Symposia in Pure Mathematics**, 1984 Each volume in this series includes papers many of a survey expository nature on a specific active area of mathematics These papers were presented at symposia summer research institutes and summer research conferences sponsored by the American Mathematical Society and other organizations **Quasiconformal Mappings in the Plane and Complex Dynamics** Luis T. Magalhães, 2025-06-10 This book comprehensively explores the foundations of quasiconformal mappings in the complex plane especially in view of applications to complex dynamics Besides playing a crucial role in dynamical systems these mappings have important applications in complex analysis geometry topology potential theory and partial differential equations functional analysis and calculus of variations electrostatics and nonlinear elasticity The work covers standard material suitable for a one year graduate level course and extends to more advanced topics in an accessible way even for students in an initial phase of university studies who have learned the basics of complex analysis at the usual level of a rigorous first one semester course on the subject At the frontier of complex analysis with real analysis quasiconformal mappings appeared in 1859 60 in the cartography work of A Tissot well before the term quasiconformal was coined by L Ahlfors in 1935 The detailed study of these mappings began in 1928 by H Grötzsch and L Ahlfors seminal work published in 1935 significantly contributed to their development and was considered for awarding him the Fields Medal in 1936 The theory further evolved in 1937 and 1939 with O Teichmüller's contributions and subsequent advancements are partially covered in this book Organized into ten chapters with eight appendices this work aims to provide an accessible self contained approach to the subject and includes examples at various levels and extensive applications to holomorphic dynamics Throughout the text historical notes contextualize advancements over time A sequel to the author's previous book Complex Analysis and Dynamics in One Variable with Applications also published by Springer this volume might be suitable for students in mathematics physics or engineering A solid background in basic mathematical analysis is

recommended to fully benefit from its content **The Cremona Group and Its Subgroups** Julie Déserti, 2021-04-13 The goal of this book is to present a portrait of the n -dimensional Cremona group with an emphasis on the 2-dimensional case. After recalling some crucial tools, the book describes a naturally defined infinite-dimensional hyperbolic space on which the Cremona group acts. This space plays a fundamental role in the study of Cremona groups as it allows one to apply tools from geometric group theory to explore properties of the subgroups of the Cremona group as well as the degree growth and dynamical behavior of birational transformations. The book describes natural topologies on the Cremona group, codifies the notion of algebraic subgroups of the Cremona groups and finishes with a chapter on the dynamics of their actions. This book is aimed at graduate students and researchers in algebraic geometry who are interested in birational geometry and its interactions with geometric group theory and dynamical systems **Number Theory** Kağan Kurşungöz, Ayberk Zeytin, 2021-11-08 Three major branches of number theory are included in the volume: namely, analytic number theory, algebraic number theory, and transcendental number theory. Original research is presented that discusses modern techniques and survey papers from selected academic scholars **Complex Analytic Cycles I** Daniel Barlet, Jón Magnússon, 2020-01-03 The book consists of a presentation from scratch of cycle space methodology in complex geometry. Applications in various contexts are given. A significant portion of the book is devoted to material which is important in the general area of complex analysis. In this regard, a geometric approach is used to obtain fundamental results such as the local parameterization theorem, Lelong's Theorem, and Remmert's direct image theorem. Methods involving cycle spaces have been used in complex geometry for some forty years. The purpose of the book is to systematically explain these methods in a way which is accessible to graduate students in mathematics as well as to research mathematicians. After the background material which is presented in the initial chapters, families of cycles are treated in the last, most important part of the book. Their topological aspects are developed in a systematic way, and some basic important applications of analytic families of cycles are given. The construction of the cycle space as a complex space, along with numerous important applications, is given in the second volume. The present book is a translation of the French version that was published in 1984 by the French Mathematical Society *Fonctions de Plusieurs Variables Complexes* François Norguet, 2006-11-15 [Catalog of Copyright Entries. Third Series](#) Library of Congress. Copyright Office, 1976 **Lectures on K3 Surfaces** Daniel Huybrechts, 2016-09-26 K3 surfaces are central objects in modern algebraic geometry. This book examines this important class of Calabi-Yau manifolds from various perspectives in eighteen self-contained chapters. It starts with the basics and guides the reader to recent breakthroughs such as the proof of the Tate conjecture for K3 surfaces and structural results on Chow groups. Powerful general techniques are introduced to study the many facets of K3 surfaces, including arithmetic, homological, and differential-geometric aspects. In this context, the book covers Hodge structures, moduli spaces, periods, derived categories, birational techniques, Chow rings, and deformation theory. Famous open conjectures, for example, the

conjectures of Calabi Weil and Artin Tate are discussed in general and for K3 surfaces in particular and each chapter ends with questions and open problems Based on lectures at the advanced graduate level this book is suitable for courses and as a reference for researchers *An Introduction to Complex Analysis in Several Variables* Lars Hörmander,1966 **Handbook of Geometry and Topology of Singularities IV** José Luis Cisneros-Molina,Lê Dũng Tráng,José Seade,2023-10-07 This is the fourth volume of the Handbook of Geometry and Topology of Singularities a series that aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research This volume consists of twelve chapters which provide an in depth and reader friendly survey of various important aspects of singularity theory Some of these complement topics previously explored in volumes I to III Amongst the topics studied in this volume are the Nash blow up the space of arcs in algebraic varieties determinantal singularities Lipschitz geometry indices of vector fields and 1 forms motivic characteristic classes the Hilbert Samuel multiplicity and comparison theorems that spring from the classical De Rham complex Singularities are ubiquitous in mathematics and science in general Singularity theory is a crucible where different types of mathematical problems interact surprising connections are born and simple questions lead to ideas which resonate in other subjects Authored by world experts the various contributions deal with both classical material and modern developments covering a wide range of topics which are linked to each other in fundamental ways The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook

Symmetries in Complex Analysis Bruce Gilligan,Guy Roos,2008 The theme of this volume concerns interactions between group actions and problems in complex analysis The first four articles deal with such topics as representation kernels in representation theory complex automorphisms and holomorphic equivalence of domains and geometric description of exceptional symmetric domains The last article is devoted to Seiberg Witten equations and Taubes correspondence on symplectic 4 manifolds BOOK JACKET **Handbook of Mathematics** Vialar Thierry,2023-08-22 The book revised consists of XI Parts and 28 Chapters covering all areas of mathematics It is a tool for students scientists engineers students of many disciplines teachers professionals writers and also for a general reader with an interest in mathematics and in science It provides a wide range of mathematical concepts definitions propositions theorems proofs examples and numerous illustrations The difficulty level can vary depending on chapters and sustained attention will be required for some The structure and list of Parts are quite classical I Foundations of Mathematics II Algebra III Number Theory IV Geometry V Analytic Geometry VI Topology VII Algebraic Topology VIII Analysis IX Category Theory X Probability and Statistics XI Applied Mathematics Appendices provide useful lists of symbols and tables for ready reference Extensive cross references allow readers to find related terms concepts and items by page number heading and objet such as theorem definition example etc The publisher s hope is that this book slightly revised and in a convenient format will serve the needs of readers be it for study teaching exploration work or research **Hypergeometric Functions, My Love** Masaaki

Yoshida,2013-06-29 The classical story of the hypergeometric functions the configuration space of 4 points on the projective line elliptic curves elliptic modular functions and the theta functions now evolves in this book to the story of hypergeometric functions in 4 variables the configuration space of 6 points in the projective plane K3 surfaces theta functions in 4 variables This modern theory has been established by the author and his collaborators in the 1990 s further development to different aspects is expected It leads the reader to a fascinating 4 dimensional world The author tells the story casually and visually in a plain language starting from elementary level such as equivalence relations the exponential function Undergraduate students should be able to enjoy the text

Harmonic Analysis on Symmetric Spaces and Applications I

Audrey Terras,2012-12-06 Since its beginnings with Fourier and as far back as the Babylonian astronomers harmonic analysis has been developed with the goal of unraveling the mysteries of the physical world of quasars brain tumors and so forth as well as the mysteries of the nonphysical but no less concrete world of prime numbers diophantine equations and zeta functions Quoting Courant and Hilbert in the preface to the first German edition of *Methods of Mathematical Physics* Recent trends and fashions have however weakened the connection between mathematics and physics Such trends are still in evidence harmful though they may be My main motivation in writing these notes has been a desire to counteract this tendency towards specialization and describe applications of harmonic analysis in such diverse areas as number theory which happens to be my specialty statistics medicine geophysics and quantum physics I remember being quite surprised to learn that the subject is useful My graduate education was that of the 1960s The standard mathematics graduate course proceeded from Definition 1.1.1 to Corollary 14.5.59 with no room in between for applications motivation history or references to related work My aim has been to write a set of notes for a very different sort of course
