*Principles and Applications of Modified Atmosphere Packaging of Foods* B. Blakistone, 2013-12-14 Modified atmosphere packaging may be defined as an active packaging method in which an altered atmosphere is created in the headspace that retards chemical deterioration while simultaneously retarding growth of spoilage organisms Shelf lives of perishable products such as dairy products meat poultry fish fruits and vegetables and bakery items are limited by biochemical changes in the product catalysed by exposure to the normal atmosphere 21 % oxygen 78% nitrogen and less than 0.1 % carbon dioxide and growth of spoilage organisms Modification of the atmosphere within a package containing these products helps to better maintain the quality of the food under longer storage conditions and retards the growth of undesirable organisms Of course deterioration is also slowed by chilling which is required for the transport to market of highly perishable items like meat poultry and fish that would either spoil or have the potential for contamination by certain food pathogens Chilling plus a modification of the atmosphere optimizes the keeping quality of food Modification of the atmosphere has been known for over a century as a means of food preservation and has become a very popular means of food preservation in the latter part of the 20th century Modified atmosphere packaging MAP is practised extensively in Europe Canada and the US Both vacuum packaging removal of air from the package and addition of gases within the package are considered MAP

**Principles and Applications of Modified Atmosphere Packaging of Foods** R. T. Parry,2012-12-06 Modified atmosphere packaging MAP has proved to be one of the most significant and innovative growth areas in retail food packaging of the past two decades Bulk modified atmosphere packs have been an accepted form of packaging for meat and poultry in the USA since the early 1970s but MAP

is only now of being widely adopted Today there is a substantial wholesale on the verge market for bulk packaged fresh vegetables and fruit and the most significant retail MAP products are fresh pasta pre cooked poultry and sausage and biscuits a unique American product The United Kingdom is the biggest single market for the modified atmosphere packaging of fresh chilled food products accounting for about half of the total European market A further quarter is represented by France The success of MAP in both the British and French markets can be attributed to the large highly sophisticated food retailing multiples and dense populations existing in both countries

**The Feasibility of Using Modified Atmospheres to Control Insect Pests in Museums** Michael K. Rust, Janice M. Kennedy, 1993-12-01 Surveys of natural history and art museums indicate that beetles belonging to the families Anobiidae and Dermestidae and moths belonging to the family Tineidae are major pests Other groups such as termites and silverfish may also be extremely important especially in southeast Asia Current control recommendations include the use of space fumigation or surface residual spraying In addition to the need to train museum personnel to use these insecticides there is always the potential for damage to rare antiquities and artifacts The primary objectives of this study were to determine 1 if controlled or modified atmospheres were lethal and 2 to establish the minimum time required to provide 100% kill of all developmental stages of insects likely to infest materials objects and artifacts in museums
