Diabetes Shamim I. Ahmad, 2013-04-12 Diabetes is a complex disease and is also one of the most common. It is very difficult to reach an accurate estimate for the global prevalence of diabetes since the standards and methods of data collection vary widely in different parts of the world. In addition, many potential sufferers are not included in the count because according to an estimate about 50% of cases remain undiagnosed for up to 10 years. However, according to an estimate for 2010 globally there are about 285 million people amounting to 6.4% of the adult population suffering from this disease. This number is estimated to increase to 439 million by 2030 if no cure is found. The general increase in life expectancy leading to an ageing population and the global rise in obesity are two main reasons for the increase. With the basic platform set, Editor presents his views and advice to the readers especially to diabetic patients suffering from T2DM on the basis of his observations and information collected from other diabetics.

The Challenge of Tourism Carrying Capacity Assessment Harry Coccossis, Alexandra Mexa, 2017-03-02 Planning and management for tourism growth is becoming essential in the context of sustainable development. Particularly so since many tourist destinations are facing severe pressures from tourist flows and activities. Such pressures are evidenced in terms of dysfunctions, congestion, environmental degradation etc which ultimately affect the attraction and competitiveness of tourism destinations. The development of tourism should be considered in accordance with sustainability principles. In this context, respecting the capacity of the local system to sustain growth becomes a key challenge. This book examines the use of various tools to define, measure and evaluate tourism carrying capacity (TCC), a tool aiming to impose limits for entering certain tourist destinations or using certain activities. Drawing on case studies from France, Spain, Italy, Greece, the UK, the Netherlands, Ireland, Belgium, Austria, Germany and Finland, it presents practical experiences of implementing TCC in various tourist destinations, i.e. historic towns, coastal zones, islands etc. It draws conclusions regarding the measurement and implementation of TCC assessment and provides further guidelines towards a comprehensive methodological framework for assessing tourism sustainability in the future.
