Ecology Of A Managed Terrestrial Landscape Patterns And Processes Of Forest Landscapes In Ontario:

Ecology of a Managed Terrestrial Landscape Ajith H. Perera, David L. Euler, Ian D. Thompson, 2011-11-01 The growing popularity of the broad landscape scale approach to forest management represents a dramatic shift from the traditional stand based focus on timber production Ecology of a Managed Terrestrial Landscape responds to the increasing need of forest policy developers planners and managers for an integrated comprehensive perspective on ecological landscapes The book examines the big picture of ecological patterns and processes through a case study of the vast managed forest region in Ontario The contributors synthesize current landscape ecological knowledge of this area and look at gaps and future research directions from several points of view spatial patterns ecological functions and processes natural disturbances and ecological responses to disturbance They also discuss the integration of landscape ecological knowledge into policies of forest management policies particularly with respect to Ontario's legislative goals of forest sustainability Ecology of a Managed Terrestrial Landscape is the first book to describe the landscape ecology of a continuously forested landscape in a comprehensive manner It is written for instructors and students in forest management wildlife ecology and landscape ecology and for forest managers planners and policy developers in North America *Ecology of a Managed Terrestrial Landscape* David Euler, Ajith H. Perera, Ian Douglas Thompson, 2000 An examination of the big picture of ecological patterns and processes through a detailed case study of the vast managed forest region of Ontario The book synthesizes ecological landscape knowledge explores gaps in understanding and offers suggestions for future directions **Forest Landscape Ecology** Ajith H. Perera, Lisa J. Buse, Thomas Crow, 2007-03-14 Landscape ecology has generated a wealth of knowledge that could enhance forest policy but little of this knowledge has found its way into practice This the first book to introduce landscape ecologists to the discipline of knowledge transfer The book considers knowledge transfer in general critically examines aspects that are unique to forest landscape ecology and reviews case studies of successful applications for policy developers and forest managers in North America Patterns and Processes in Forest Landscapes Raffaele LaFortezza, Jiquan Chen, Giovanni Sanesi, Thomas R. Crow, 2008-08-30 Increasing evidence suggests that the composition and spatial configuration the pattern of forest landscapes affect many ecological processes including the movement and persistence of particular species the susceptibility and spread of disturbances such as fires or pest outbreaks and the redistribution of matter and nutrients Understanding these issues is key to the successful management of complex multifunctional forest landscapes and landscape ecology based on a foundation of island biogeography and meta population dynamic theories provides the rationale to deal with this pattern to process interaction at different spatial and temporal scales This carefully edited volume represents a stimulating addition to the international literature on landscape ecology and resource management It provides key insights into some of the applicable landscape ecological theories that underlie forest management with a specific focus on how forest management can benefit from landscape ecology and how landscape ecology

can be advanced by tackling challenging problems in forest landscape management. It also presents a series of case studies from Europe, Asia, North America, Africa, and Australia exploring the issues of disturbance, diversity, management, and scale, and with a specific focus on how human intervention affects forest landscapes and in turn how landscapes influence humans and their culture. An important reference for advanced students and researchers in landscape ecology, conservation biology, forest ecology, natural resource management, and ecology across multiple scales, the book will also appeal to researchers and practitioners in reserve design, ecological restoration, forest management, landscape planning, and landscape architecture.

Beyond the Global City James Gordon Nelson, 2012 Looking beyond the smoke screen of Toronto's rapid and costly growth to re-envision sustainable planning in Ontario's neglected regions Plant Disturbance Ecology Edward A. Johnson, Kiyoko Miyanishi, 2020-10-21 Disturbance ecology continues to be an active area of research having undergone advances in many areas in recent years. One emerging direction is the increased coupling of physical and ecological processes in which disturbances are increasingly traced back to mechanisms that cause the disturbances themselves, such as earth surface processes, mesoscale and larger meteorological processes, and the ecological effects of interest are increasingly physiological. Plant Disturbance Ecology 2nd Edition encourages movement away from the informal conceptual approach traditionally used in defining natural disturbances and clearly presents how scientists can use a multitude of approaches in plant disturbance ecology. This edition includes nine revised chapters from the first edition as well as new, more comprehensive chapters on fire disturbance and beaver disturbance. Edited by leading experts in the field, Plant Disturbance Ecology 2nd Edition is an essential resource for scientists interested in understanding plant disturbance and ecological processes. Advances in understanding of natural disturbances by combining geophysical and ecological processes. Provides a framework for collaboration between geophysical scientists and ecologists studying natural disturbances. Includes fully updated research with 5 new chapters and revision of 11 chapters from the first edition. Understanding Forest Disturbance and Spatial Pattern Michael A. Wulder, Steven E. Franklin, 2006-07-27 Remote sensing and GIS are increasingly used as tools for monitoring and managing forests. Remotely sensed and GIS data are now the data sources of choice for capturing, documenting, and understanding forest disturbance and landscape pattern. Sitting astride the fields of ecology, forestry, and remote sensing, GIS Understanding Forest Disturbance **Ecology of Hierarchical Landscapes** Jiquan Chen, 2006 The idea for this book grew out of 1 the realisation that development of the theory of landscape ecology has now reached the point where rigorous field work is required to validate models, test assumptions, and ideas of scaling theory and refine our understanding of landscape features and their delineation, 2 the relative scarcity of compilations that have examined the role of field research or interdisciplinary management applications in advancing the science of landscape ecology, and 3 the increasing amount of information coming out of the Chequamegon Integrated Field Project (CIFP) on relevant topics. This book synthesises the experiences and lessons learned from the CIFP project and other relevant landscape studies in an attempt to

demonstrate the utility of field studies and emerging technology to the advancement of the science This book is organised to synthesise and update knowledge on research topics mentioned previously with an emphasis on ecological consequences i e implications for ecological function of the approach to and understanding of these topics across levels of the ecological hierarchy **Emulating Natural Forest Landscape Disturbances** Ajith H. Perera, Lisa J. Buse, Michael G.

Weber, 2008-01-11 What is a natural forest disturbance How well do we understand natural forest disturbances and how might we emulate them in forest management What role does emulation play in forest management Representing a range of geographic perspectives from across Canada and the United States this book looks at the escalating public debate on the viability of natural disturbance emulation for sustaining forest landscapes from the perspective of policymakers forestry professionals academics and conservationists This book provides a scientific foundation for justifying the use of and a solid framework for examining the ambiguities inherent in emulating natural forest landscape disturbance It acknowledges the divergent expectations that practitioners face and offers a balanced view of the promises and challenges associated with applying this emerging forest management paradigm The first section examines foundational concepts addressing questions of what emulation involves and what ecological reasoning substantiates it These include a broad overview a detailed review of emerging forest management paradigms and their global context and an examination of the ecological premise for emulating natural disturbance This section also explores the current understanding of natural disturbance regimes including the two most prevalent in North America fire and insects The second section uses case studies from a wide geographical range to address the characterization of natural disturbances and the development of applied templates for their emulation through forest management The emphasis on fire regimes in this section reflects the greater focus that has traditionally been placed on understanding and managing fire compared with other forms of disturbance and utilizes several viewpoints to address the lessons learned from historical disturbance patterns Reflecting on current thinking in the field immediate challenges and potential directions the final section moves deeper into the issues of practical applications by exploring the expectations for and feasibility of emulating natural disturbance through forest management **Mapping Forest**

Landscape Patterns Tarmo K. Remmel, Ajith H. Perera, 2017-09-07 This book explores the concepts premises advancements and challenges in quantifying natural forest landscape patterns through mapping techniques After several decades of development and use these tools can now be examined for their foundations intentions scope advancements and limitations When applied to natural forest landscapes mapping techniques must address concepts such as stochasticity heterogeneity scale dependence non Euclidean geometry continuity non linearity and parsimony as well as be explicit about the intended degree of abstraction and assumptions These studies focus on quantifying natural i e non human engineered forest landscape patterns because those patterns are not planned are relatively complex and pose the greatest challenges in cartography and landscape representation for further interpretation and analysis *Integrating Landscape Ecology Into Natural Resource*

Management Jianguo Liu, William W. Taylor, 2002-08 The rapidly increasing global population has dramatically increased the demands for natural resources and has caused significant changes in quantity and quality of natural resources To achieve sustainable resource management it is essential to obtain insightful guidance from emerging disciplines such as landscape ecology This text addresses the links between landscape ecology and natural resource management These links are discussed in the context of various landscape types a diverse set of resources and a wide range of management issues A large number of landscape ecology concepts principles and methods are introduced Critical reviews of past management practices and a number of case studies are presented This text provides many guidelines for managing natural resources from a landscape perspective and offers useful suggestions for landscape ecologists to carry out research relevant to natural resource management In addition it will be an ideal supplemental text for graduate and advanced undergraduate ecology courses

Handbook of Water Sensitive Planning and Design Robert L. France, 2002-05-29 Design options and planning procedures must be critically examined to ensure that landscapes are created with sensitivity to water quality and management issues as well as overall ecological integrity Handbook of Water Sensitive Planning and Design presents the history of water as a design and planning element in landscape architecture and describes new interpretations of water management This text pushes the frontiers of standard water management in new directions challenging readers into abandoning the comfortable safety of conducting business as usual within narrow disciplinary confines and instead directing views outward to the exciting and incompletely mapped regions of true interdisciplinary water sensitive planning and design With contributions from renowned practitioners Part I provides seventeen chapters addressing the subject of site specific water sensitive design and Part II presents another seventeen chapters focusing on issues relating to the water sensitive planning of riparian buffers and watersheds In addition Professor France has provided a Response to accompany each chapter which succinctly underscores the salient features in more detail and emphasizes cross linking to other chapters in the book The Overview provides a brief road map to navigate through the section Finally the discussion summaries at the end of each section elaborate on past problems current challenges and future directions Handbook of Water Sensitive Planning and Design puts forward the very best of modern water sensitive planning and design and should be required reading for everyone involved in this dynamic and crucial field

Simulation Modeling of Forest Landscape Disturbances Ajith H. Perera, Brian R. Sturtevant, Lisa J. Buse, 2015-07-27 Forest landscape disturbances are a global phenomenon Simulation models are an important tool in understanding these broad scale processes and exploring their effects on forest ecosystems This book contains a collection of insights from a group of ecologists who address a variety of processes physical disturbances such as drought wind and fire biological disturbances such as defoliating insects and bark beetles anthropogenic influences interactions among disturbances effects of climate change on disturbances and the recovery of forest landscapes from disturbances all from a simulation modeling

perspective These discussions and examples offer a broad synopsis of the state of this rapidly evolving subject *Forest Ecology* Daniel M. Kashian, Donald R. Zak, Burton V. Barnes, Stephen H. Spurr, 2023-01-16 FOREST ECOLOGY Authoritative resource covering traditional plant ecology topics and contemporary components such as climate change invasive species ecosystem services and more Forest Ecology provides comprehensive coverage of the field focusing on traditional plant ecology topics of tree structure and growth regeneration effects of light and temperature on tree physiology forest communities succession and diversity The work also reviews abiotic factors of light temperature physiography landforms and topography soil and disturbance especially fire and provides coverage of ecosystem level topics including carbon storage and balance nutrient cycling and forest ecosystem productivity The 5th edition of Forest Ecology retains the readability and accessibility of the previous editions and includes important additional topical material that has surfaced in the field All topics are approached with a landscape ecosystem or geo ecological view which places biota organisms and communities in context as integral parts of whole ecosystems that also include air atmosphere and climate topography soil and water As such the book fills a niche utilized by no other forest ecology text on the market helping students and researchers consider whole ecosystems at multiple scales Sample topics covered in Forest Ecology include Contemporary components of forest ecology including climate change invasive species diversity ecological forestry landscape ecology and ecosystem services Characteristics of physiography important for forest ecosystems including its effects on microclimate disturbance soil and vegetation Genetic diversity of woody plants and genecological differentiation of tree species including the importance of hybridization polyploidy and epigenetics Site quality estimation using tree height and ground flora and multiple factor approaches to forest site and ecosystem classification and mapping Forest Ecology is a highly accessible text for students but it also serves as an excellent reference for academics In addition practitioners of forest ecology can also harness the information within to gain better insight into the field for practical application of concepts **Fire Phenomena and the Earth System** Claire M. Belcher, 2013-04-08 Fire plays a key role in Earth system processes Wildfires influence the carbon cycle and the nutrient balance of our planet and may even play a role in regulating the oxygen content of our atmosphere The evolutionary history of plants has been intimately tied to fire and this in part explains the distribution of our ecosystems and their ability to withstand the effects of natural fires today Fire Phenomena and the Earth System brings together the various subdisciplines within fire science to provide a synthesis of our understanding of the role of wildfire in the Earth system The book shows how knowledge of fire phenomena and the nature of combustion of natural fuels can be used to understand modern wildfires interpret fire events in the geological record and to understand the role of fire in a variety of Earth system processes By bringing together chapters written by leading international researchers from a range of geological environmental chemical and engineering disciplines the book will stimulate the exchange of ideas and knowledge across these subject areas Fire Phenomena and the Earth System provides a truly interdisciplinary guide that can inform us about

Earth's past, present and beyond Readership: Advanced students and researchers across a wide range of earth environmental and life sciences including biogeochemistry, paleoclimatology, atmospheric science, palaeontology and paleoecology, combustion science, ecology and forestry *Ecological Bulletins, Targets and Tools for the Maintenance of Forest Biodiversity* Per Angelstam, Monica Donz-Breuss, Jean-Michel Roberge, 2009-05-06 Maintaining forest biodiversity by combining protection, management and restoration of forest and woodland landscapes is a central component of sustainable development. Evidence that there are threshold levels for how much habitat loss may be tolerated for viable populations of specialised species to be maintained. Policy makers, businesses and managers pose questions about how to balance use of renewable forest resources and conserve biodiversity. Examples are presented on how biodiversity assessments can be made. Proposes how the critical gaps in our knowledge identified throughout the book could be filled through macroecological research and international co-operation.

The Weight of Gold Mica Jorgenson, 2023-06-06 Mining in North America has long been criticized for its impact on the natural environment. Mica Jorgenson's *The Weight of Gold* explores the history of Ontario, Canada's rise to prominence in the gold mining industry while detailing a series of environmental crises related to extraction activities. In Ontario, in 1909 the discovery of exceptionally rich hard rock gold deposits in the Abitibi region in the north precipitated industrial development modeled on precedents in Australia, South Africa and the United States. By the late 1920s Ontario's mines had reached their maturity and in 1928 Minister of Mines Charles McRae called Canada the mineral treasure house to the world. Mining companies increasingly depended upon their ability to redistribute the burdens of mining onto surrounding communities, a strategy they continue to use today both at home and abroad. Jorgenson connects Canadian gold mining to its international context, revealing that Ontario's gold mines informed extractive knowledge which would go on to shape Canada's mining industry over the next century.

Boreal Shield Watersheds John Gunn, Robert John Steedman, Richard Ryder, 2003-08-27 *Boreal Shield Watersheds: Lake Trout Ecosystems in a Changing Environment* brings together the work of a renowned international group of scientists who specialize in aquatic science and environmental management. They explore the functioning of Boreal Shield ecosystems focusing on the lake trout, the classic coldwater species of northern glaciated land.

Shaped by the West Wind Claire Elizabeth Campbell, 2005 Claire Elizabeth Campbell draws from recent work in cultural history, landscape studies in geography and art history and environmental history to explore what happens when external agendas confront local realities, a story central to the Canadian experience. Explorers, fishers, artists and park planners all were forced to respond to the unique contours of this inland sea; their encounters defined a regional identity even as they constructed a popular image for the Bay in the national imagination.
