people do things You must change their behavior In fact simply put food safety equals behavior When viewed from these lenses one of the most common contributing causes of food borne disease is unsafe behavior such as improper hand washing cross contamination or undercooking food Thus to improve food safety we need to better integrate food science with behavioral science and use a systems based approach to managing food safety risk The importance of organizational culture human behavior and systems thinking is well documented in the occupational safety and health fields However significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety
