Should We Risk It? Daniel M. Kammen, David M. Hassenzehl, 2018-06-05 How dangerous is smoking? What are the risks of nuclear power or of climate change? What are the chances of dying on an airplane? More importantly, how do we use this information once we have it? The demand for risk analysts who are able to answer such questions has grown exponentially in recent years. Yet programs to train these analysts have not kept pace. In this book, Daniel Kammen and David Hassenzehl address that problem. They draw together, organize, and seek to unify previously disparate theories and methodologies connected with risk analysis for health, environmental, and technological problems. They also provide a rich variety of case studies and worked problems meeting the growing need for an up-to-date book suitable for teaching and individual learning. The specific problems addressed in the book include order of magnitude estimation, dose-response calculations, exposure assessment, extrapolations, and forecasts based on experimental or natural data, modeling, and the problems of complexity in models, fault tree analysis, managing and estimating uncertainty, and social theories of risk and risk communication. The authors cover basic and intermediate statistics as well as Monte Carlo methods, Bayesian analysis, and various techniques of uncertainty and forecast evaluation. The volume's unique approach will appeal to a wide range of people in environmental science and studies, health care, and engineering, as well as to policy makers confronted by the increasing number of decisions requiring risk and cost-benefit analysis. *Should We Risk It?* will become a standard text in courses involving risk and decision analysis and in courses of applied statistics with a focus on environmental and technological issues.

Risk vs. Risk John D. Graham, Jonathan Baert Wiener, 2009-07-01 We see the stories in the newspaper nearly every day: a drug hailed as a breakthrough treatment turns out to cause harmful side effects; controls implemented to reduce air pollution are shown to generate hazardous solid waste; bans on dangerous chemicals result in the introduction of even more risky substitutes. Could our efforts to protect our health and the environment actually be making things worse? In *Risk versus Risk*, John D. Graham, Jonathan Baert Wiener, and their colleagues at the Harvard Center for Risk Analysis marshal an impressive set of case studies which demonstrate that all too often our nation's campaign to reduce risks to our health and the environment is at war with itself.
