Mobile-source

Air Toxics Health Effects Institute. Air Toxics Review Panel, 2007 Special Report 16 summarizes the health effects of exposure to the 21 Mobile Source Air Toxics MSATs defined by the 2001 EPA mobile source rulemaking and critically analyzes the literature for a subset of seven MSATs: acetaldehyde, acrolein, benzene, 1,3-butadiene, formaldehyde, naphthalene, and polycyclic organic matter. The report also assesses and summarizes research gaps and unresolved questions as understood in the context of the current regulatory agenda. The Report focuses on MSATs for which mobile sources are a sizable source of human exposure and for which existing data suggest that health effects might be observed at concentrations approaching those found in ambient air. For each MSAT the following questions are addressed: 1. To what extent are mobile sources a significant source of exposure to this MSAT? 2. Does this MSAT affect human health? 3. Does this MSAT affect human health at environmental conditions? Special Report 16 describes a review performed by a Special Panel with expertise in exposure assessment, toxicology, clinical medicine, and epidemiology. The Panel reviewed the peer-reviewed literature on MSATs, reached key conclusions, and made recommendations for future research. The completed report was reviewed by experts in a variety of fields and amended to reflect the useful comments and critiques.

Monthly Catalog of

United States Government Publications, 2003 **Air Pollution Calculations** Daniel A. Vallero, 2019-05-03 Air Pollution Calculations introduces the equations and formulae that are most important to air pollution but goes a step further. Most texts lack examples of how these equations and formulae apply to the quantification of real world scenarios and conditions. The ample example calculations apply to current air quality problems including emission inventories, risk estimations, biogeochemical cycling assessments and efficiencies in air pollution control technologies. In addition, the book explains thermodynamics and fluid dynamics in step-by-step and understandable calculations using air quality and multimedia modeling, reliability engineering and engineering economics using practical examples likely to be encountered by scientists, engineers, managers and decision makers. The book touches on the environmental variables, constraints and drivers that can influence pollutant mass, volume and concentrations which in turn determine toxicity and adverse outcomes caused by air pollution. How the pollutants form, move, partition, transform and find their fate are explained using the entire range of

atmospheric phenomena The control prevention and mitigation of air pollution are explained based on physical chemical and biological principles which is crucial to science based policy and decision making Users will find this to be a comprehensive single resource that will help them understand air pollution quantify existing data and help those whose work is impacted by air pollution Explains air pollution in a comprehensive manner enabling readers to understand how to measure and assess risks to human populations and ecosystems actually or potentially exposed to air pollutants Covers air pollution from a multivariate systems approach bringing in atmospheric processes health impacts environmental impacts controls and prevention Facilitates an understanding of broad factors like climate and transport that influence patterns and change in pollutant concentrations both spatially and over time Partikeldeposition in der Kinderlunge Robert Sturm,2019-12-16 Die Inhalation und intrapulmonale Deposition von verschiedenen Teilchen aus der Umgebungsluft stellen seit vielen Jahrzehnten bedeutende Forschungsbereiche der Lungenmedizin dar Etliche ber die Atmung aufgenommene Partikel gelten mittlerweile als gut klassifizierbare Ausl ser unterschiedlicher Lungenkrankheiten In der n heren Vergangenheit wurde das Hauptaugenmerk der medizinischen Forschung vermehrt auf die Wirkung inhalierter Teilchen in der Kinderlunge gelegt da junge Probanden in zahlreichen Situationen einer st rkeren Partikelexposition als Erwachsene ausgesetzt sind Das Buch pr sentiert theoretische Modelle zur Vorhersage der Teilchenablagerung in den Lungen unterschiedlich alter Kinder Dabei wird der Versuch der Herausarbeitung einer eventuellen Altersabh ngigkeit der totalen regionalen und lokalen Deposition unternommen

U. S. Environmental Agency,2015-01-06 This Health Assessment Document for Diesel Engine Exhaust DE represents EPA s first comprehensive review of the potential health effects from ambient exposure to exhaust from diesel engines The assessment was developed to provide information about the potential for DE to pose environmental health hazards information that would be useful in evaluating regulatory needs under provisions of the Clean Air Act The assessment identifies and characterizes the potential human health hazards of DE i e hazard assessment and seeks to estimate the relationship between exposure and disease response for the key health effects i e dose response assessment The diesel engine has been a vital workhorse in the United States powering many of its large trucks buses and farm railroad marine and construction equipment Expectations are that diesel engine use in these areas will increase due to the superior performance characteristics of the engine Diesel engine exhaust DE however contains harmful pollutants in a complex mixture of gases and particulates Human exposure to this exhaust comes from both highway uses on road as well as non road uses of the diesel engine EPA started evaluating and regulating the gaseous emissions from the heavy duty highway use of diesel engines in the 1970s and particle emissions in the 1980s The reduction of harmful exhaust emissions has taken a large step forward because of standards issued in 2000 which will bring about very large reductions in exhaust emissions for model year 2007 heavy duty engines used in trucks buses and other on road uses A draft of this assessment along with the peer review comments of the Clean Air Scientific Advisory Committee was part of the scientific basis for EPA s regulation of heavy duty highway engines completed in December 2000 The information provided by this assessment was useful in developing EPA s understanding of the public health implications of exposure to DE and the public health benefits of taking regulatory action to control exhaust emissions EPA anticipates developing similarly stringent regulations for other diesel engine uses including those used in non road applications
