Frontier Issues In Economic Thought:

Frontier Issues in Economic Thought, 1995 *Sustainable Development as a Civilizational Revolution* Artur Pawlowski, 2011-05-24 As a concept sustainable development is in conflict with traditional development based upon economic growth Sustainable development is an attempt to formulate a programme that integrates different aspects ecological social and economical which were usually considered as separate from each other Sustainable Development as a Civilization *A Survey of Ecological Economics* Rajaram Krishnan, Jonathan Harris, Neva R. Goodwin, 2013-04-22 The emergent discipline of ecological economics is based on the idea that the world's economies are a function of the earth's ecosystems an idea that radically reverses the world view of neoclassical economics A Survey of Ecological Economics provides the first overview of this new field and a comprehensive and systematic survey of its critical literature The editors of the volume summarize ninety five seminal articles selected through an exhaustive survey that advance the field of ecological economics and represent the best thinking to date in the area Each two to three page summary is far more comprehensive than a typical abstract and presents both the topics covered in each paper and the most important arguments made about each topic Sections cover historical perspective definition scope and interdisciplinary issues theoretical frameworks and techniques energy and resource flow analysis accounting and evaluation North South international issues ethical social institutional issues Each section is preceded by an introductory essay that outlines the current state of knowledge in the field and proposes a research agenda for the future A Survey of Ecological Economics is the first volume in the Frontier Issues in Economic Thought series produced by the Global Development And Environment Institute at Tufts University *A Survey of Sustainable Development* Jonathan Harris, Timothy Wise, Kevin Gallagher, Neva R. Goodwin, 2013-04-16 Perpetual economic growth is physically impossible on a planet with finite resources Many concerned with humanity's future have focused on the concept of sustainable development as an alternative as they seek means of achieving current economic and social goals without compromising the ability of future generations to meet their own goals Sustainable development brings together elements of economics public policy sociology ecology resource management and other related areas and while the term has become quite popular it is rarely defined and even less often is it understood A Survey of Sustainable Development addresses that problem by bringing together in a single volume the most important works on sustainable human and economic development It offers a broad overview of the subject and gives the reader a quick and thorough guide to this highly diffuse topic The volume offers ten sections on topics including economic and social dimensions of sustainable development the North South balance population and the demographic transition agriculture and renewable resources energy and materials use globalization and corporate responsibility local and national strategies Each section is introduced with an essay by one of the volume editors that provides an overview of the subject and a summary of the mainstream literature followed by two to three page abstracts of the most important articles or book chapters on the topic A Survey of Sustainable Development is the sixth

and final volume in the Frontier Issues of Economic Thought series produced by the Global Development And Environment Institute at Tufts University Each book brings together the most important articles and book chapters in a frontier area of economics where important new work is being done but has not yet been incorporated into the mainstream of economic study The book is an essential reference for students and scholars concerned with economics environmental studies public policy and administration international development and a broad range of related fields

The Consumer Society Neva R. Goodwin, Frank Ackerman, David Kiron, 2013-04-16 The developed countries particularly the United States consume a disproportionate share of the world's resources yet high and rising levels of consumption do not necessarily lead to greater satisfaction security or well being even for affluent consumers The Consumer Society provides brief summaries of the most important and influential writings on the environmental moral and social implications of a consumer society and consumer lifestyles Each section consists of ten to twelve summaries of critical writings in a specific area with an introductory essay that outlines the state of knowledge in that area and indicates where further research is needed Sections cover Scope and Definition Consumption in the Affluent Society Family Gender and Socialization The History of Consumerism Foundations of Economic Theories of Consumption Critiques and Alternatives in Economic Theory Perpetuating Consumer Culture Media Advertising and Wants Creation Consumption and the Environment Globalization and Consumer Culture Visions of an Alternative This book is the second volume in the Frontier Issues in Economic Thought series which provides surveys of the most significant writings in emergent areas of economics an invaluable aid in fast growing fields where genuine new ground is being broken The series brings together economists sociologists psychologists and philosophers to develop analyses that challenge and enrich the dominant neoclassical paradigm The Consumer Society is an essential guide to and summary of the literature of consumption and will be of interest to anyone concerned with the deeper economic social and ethical implications of consumerism

The Changing Nature of Work Frank Ackerman, Neva R. Goodwin, Laurie Dougherty, Kevin Gallagher, 1998-10 Human impacts on the environment are largely driven by economic forces If a more ecologically sustainable world is to be achieved significant changes must be made to the current growth and consumption dependent economic system The Frontier Issues in Economic Thought series was designed to assist the growing number of economists and others who are responding to the need for new thinking about economics in the face of environmental and social forces that are reshaping the world The Changing Nature of Work examines the causes and effects of the rapid transformation of the world of work It provides concise summaries of the key writings on work and workplace issues extending the frontiers of labor economics to include the often overlooked social and psychological dimensions of work The book begins with a foreword by former Secretary of Labor Robert Reich that presents labor in contemporary perspective An introductory overview provides a brief history of the changing nature of work and situates current problems in the context of longer term developments Following that are eight topical sections that feature three to five page summaries for each of the

ten to twelve most important articles or book chapters on a subject Sections cover new directions in labor economics social and psychological dimensions of work and unemployment globalization and labor new technologies and organizational change flexibility and internal labor markets new patterns of industrial relations family gender paid and unpaid work difference and diversity in the workplace The book provides a roadmap for scholars on the vast and diverse literature concerning labor issues and affords students a quick overview of that rapidly changing field It is an important contribution to the series and is a valuable book for anyone interested in labor as well as for students and scholars of labor economics industrial sociology industrial relations social psychology and their respective disciplines Regulation in Practice Martino Maggetti, 2024-10-31 This book develops and applies an inventive theoretical approach to the comparative study of the neglected aspect of the real or de facto independence of regulatory agencies The book begins with an examination of the organisational and institutional factors shaping the de facto independence of regulatory agencies in Western Europe There follows an analysis of the role of independent regulatory agencies in the policy making process using de facto independence as an explanatory variable The final section is devoted to the relationship between regulatory agencies and the news media In the conclusive discussion the author also tackles a set of normative questions which relates to the virtues and perils of independence Global Backlash Robin Broad, 2002-03-20 Global Backlash is the first book to move beyond the monolithic portrayal of the globalization protests that have escalated since Seattle and are not likely to abate soon With trenchant analysis and dozens of primary documents from a variety of popular and uncommon sources Robin Broad explores proposals and initiatives coming from the backlash to answer the question But what do they want A range of sophisticated propositions and a vibrant debate among segments of the backlash emerge Highly readable and analytically powerful this book is vital to understanding the most potent protest movement of our times **Renewable Energy from Forest Resources in the United States** Barry Solomon, Valerie A. Luzadis, 2008-10-30 Interest in biomass energy resources from forests farms and other sources has been rapidly increasing in recent years because of growing concern with reducing carbon dioxide emissions and developing alternatives to increasingly scarce expensive and insecure oil supplies The uniqueness of this book is its coverage of biomass energy markets in the US from an economic as well as technical perspective Existing books typically focus on single markets or technical aspects at the exclusion of economics and have given greater coverage to biomass energy outside the US This edited collection has three main parts Part One provides a historical overview of forest biomass energy use in the US the major technologies economics market prospects and policies Part Two presents forest biomass energy assessments including life cycle and sustainability perspectives and Part Three includes five sets of regional case studies After reviewing the history of wood energy use in the US and technology options the book shows that forests could displace sixteen per cent of domestic transportation fuel use in 2030 Renewable Energy from Forest Resources in the United States includes a Foreword from Chris Flavin President of the Worldwatch Institute **OUR FRAGILE WORLD:**

Savage, 2008 In *The Subjective Dimension of Human Work* The Conversion of the Acting Person According to Karol Wojtyła John Paul II and Bernard Lonergan Deborah Savage explores the proper framework for understanding the human person in the act of self transcendence and for apprehending the role that human work may play in living a Christian life Through a comparative analysis of the anthropological theories of Wojtyła and Lonergan Savage seeks to establish the philosophical and theological foundations of how one becomes more of a human being through the work that he or she does and how to grasp the process of conversion that is made possible through work This book is suitable for graduate level courses in the neo Thomist tradition especially those analyzing the relevance of that tradition to modern day problems **Creating Distinctions in Dutch Genre Painting** Angela Ho, 2025-10-01 In the mid to late seventeenth century a number of Dutch painters created a new type of refined genre painting that was much admired by elite collectors In this book Angela Ho uses the examples of Gerrit Dou Gerard ter Borch and Frans van Mieris to show how this group of artists made creative use of

repetition such as crafting virtuosic self referential compositions around signature motifs or engaging esteemed predecessors in a competitive dialogue through emulation to project a distinctive artistic personality The resulting paintings enabled purchasers and viewers to exercise their connoisseurial eye and claim membership in an exclusive circle of sophisticated enthusiasts making creative repetition a successful strategy for both artists and viewers Angela Ho shows how Dutch painters in the mid to late 17th century used repetition to project a distinctive artistic personality

Sustainable Tourism Development in Tanzania Wineaster Anderson, Lena Mossberg, Tommy D. Andersson, 2020-12-11 Tanzania is rivalled by few countries if any in terms of its bountiful natural and cultural tourist attractions Given that tourism development if sustainable is an outstanding policy for distributing welfare even to less developed parts of a country this field is of particular importance to Tanzania In this edited volume prominent scholars focus on the practises and policies of tourism development with a particular eye on the case of Tanzania They explore the demand for sustainability from international tourists the need for local food and linkages between the tourism and agricultural sectors and the production of tourism services in a responsible and inclusive way The book will be a valuable source of knowledge for the tourism industry as well as policymakers scholars and students who are concerned about the development of a form of tourism which benefits a country inclusively and responsibly

Private Racism Sonu Bedi, 2020 Is about enlarging the boundary of racial justice by recognizing and addressing private racism It draws on political theory and civil rights law to do so

The Psychology of Overeating Kima Cargill, 2015-10-22 Drawing on empirical research clinical case material and vivid examples from modern culture The Psychology of Overeating demonstrates that overeating must be understood as part of the wider cultural problem of consumption and materialism Highlighting modern society's pathological need to consume Kima Cargill explores how our limitless consumer culture offers an endless array of delicious food as well as easy money whilst obscuring the long term effects of overconsumption The book investigates how developments in food science branding and marketing have transformed Western diets and how the food industry employs psychology to trick us into eating more and more and why we let them Drawing striking parallels between Big Food and Big Pharma Cargill shows how both industries use similar tactics to manufacture desire resist regulation and convince us that the solution to overconsumption is further consumption Real life examples illustrate how loneliness depression and lack of purpose help to drive consumption and how this is attributed to individual failure rather than wider culture The first book to introduce a clinical and existential psychology perspective into the field of food studies Cargill's interdisciplinary approach bridges the gulf between theory and practice Key reading for students and researchers in food studies psychology health and nutrition and anyone wishing to learn more about the relationship between food and consumption
