Aaronson, 1987-12 Discoveries that a small subset of cellular genes proto oncogenes are frequent targets of carcinogenic insults or chance that convert them to oncogenes have opened new areas of approach to understanding and eventually controlling the events leading to cancer New technology has made it possible not only to identify genes involved in the etiology of cancer but to dissect their molecular composition This symposium brought together scientists from areas of carcinogenesis and molecular biology to review the state of the art in this field The papers presented in this proceedings volume can be grouped into four broad areas the mechanisms of oncogene activation and associations of oncogenes with tumours the mechanisms of oncogene action the physiology of proto oncogenes and the discovery and characterization of new oncogenes The Cumulative Book Index, 1986 A world list of books in the English language *New Technologies in Reproductive Medicine, Neonatology and Gynecology: The Proceedings of the 1st International Symposium, March 1998, Folgaria, Italy* E.V. **RNA Tumor Viruses, Oncogenes, Human Cancer and AIDS: On the Frontiers of Understanding** Philip Furmanski, Jean Carol Hager, Marvin A. Rich, 2012-12-06 We stand today on the threshold of a new understanding of cancer Primarily through the powerful tools of molecular biology unified hypotheses explaining the origins of the disease are emerging and rapidly being validated This volume which presents the latest findings from laboratories throughout the world on the role of RNA tumor viruses in cancer is a celebration of these achievements and a prediction of further progress leading ultimately to the control of the disease It is important in this context to recall the natural history or life cycle of RNA cancer virology From the earliest days of the science when viruses were first recognized as distinct biologic agents of etiologic significance their role in cancer was proposed and hotly debated The critical early discoveries even those made as recently as 25 years ago were met with rejection not skepticism or cautious restraint but outright rejection During the 60 s there was a gradual acceptance of the association between viruses and cancer the result of landmark studies in experimental systems and this led to a frenzy of activity in the field There followed another period of doubt and uncertainty due to the difficulty in attempting to apply directly and in retrospect inappropriately the tenets of infectious disease to human cancers only to have the field resurrected revitalized and redirected by the explosion of progress in molecular biology and genetics

Morrison, 2002 This is the second edition of a book originally published by Lippincott Williams Wilkins Cancer in Dogs and Cats 2nd edition has been completely updated and revised to provide the clinician with all the tools needed to properly diagnose and manage treatable cancers in dogs and cats The presentation is a practical blend of basic science and both medical and surgical therapeutics designed to help the clinician make the difficult decisions inherent with cancer treatment An entirely new and comprehensive index is provided which allows precise and easy access to the content of the book **INIS Atomindex** ,1988 **Cancer Research** ,2008-10 Breast Cancer: Biological and Clinical Progress L. Dogliotti, A. Sapino, G. Bussolati, 2012-12-06 The fight against breast cancer is expected to be effectively stimulated by interdisciplinary approaches and cross fertilization between laboratory and clinical research findings Of major importance are therefore meetings promoting fast transfer to clinical applications of findings by basic scientists The present volume reporting the proceedings of the 1991 Biennial Conference of the International Association for Breast Cancer Research hopes to achieve this goal by presenting the most recent observations in the laboratory and their possible applications for diagnostic evaluations and clinical treatments The sections of the book focus first on the oncogenes more likely involved in mammary tumorigenesis and on the polypeptide factors and steroid hormones affecting proliferation and possibly inducing carcinogenesis in breast epithelium A section is devoted to the epidemiological studies and to the identification of risk factors a way to select populations at higher risk and possibly to help in preventing the disease Special

emphasis is given to the establishment of diagnostic criteria and to the selection of prognostic factors which must support an effective therapeutic planning It is our hope that this volume a timely update of the most recent advances in specific fields presented by basic scientists pathologists and clinicians will stimulate new insights and progresses leading ultimately to the control of breast cancer **ICCCR International Conference on Cancer Prevention: Facts, Maybes, & Rumors** ,1992
