From White Dwarfs To Black Holes The Legacy Of S Chandrasekhar:

From White Dwarfs to Black Holes G. Srinivasan, 2000-05-15 *From White Dwarfs to Black Holes* chronicles the extraordinarily productive scientific career of Subrahmanyan Chandrasekhar one of the twentieth century's most distinguished astrophysicists Among Chandrasekhar's many discoveries were the critical mass that makes a star too massive to become a white dwarf and the mathematical theory of black holes In 1983 he shared the Nobel Prize for Physics for these and other achievements Over the course of more than six decades of active research Chandrasekhar investigated a dizzying array of subjects G Srinivasan notes in the preface to this book that the range of Chandra's contributions is so vast that no one person in the physics or astronomy community can undertake the task of commenting on his achievements Thus in this collection ten eminent scientists evaluate Chandrasekhar's contributions to their own fields of specialization Donald E Osterbrock closes the volume with a historical discussion of Chandrasekhar's interactions with graduate students during his more than quarter century at Yerkes Observatory Contributors are James Binney John L Friedman Norman R Lebovitz Donald E Osterbrock E N Parker Roger Penrose A R P Rau George B Rybicki E E Salpeter Bernard F Schutz and G Srinivasan

The Encyclopedia of Science and Technology James Trefil, 2001-08-24 Edited by acclaimed science writer and physicist James Trefil the Encyclopedia's 1000 entries combine in depth coverage with a vivid graphic format to bring every facet of science technology and medicine into stunning focus From absolute zero to the Mesozoic era to semiconductors to the twin paradox Trefil and his co authors have an uncanny ability to convey how the universe works and to show readers how to apply that knowledge to everyday problems

The Physics of Extragalactic Radio Sources David De Young, 2002 Extragalactic radio sources are among the most unusual and spectacular objects in the universe with sizes in excess of millions of light years radiated energies over ten times those of normal galaxies and a unique morphology They reveal some of the most dramatic physical events ever seen and provide essential clues to the

basic evolutionary tracks followed by all galaxies and groups of galaxies In *The Physics of Extragalactic Radio Sources* David De Young provides a clearly written overview of what is currently known about these objects A unique feature of the book is De Young s emphasis on the physical processes associated with extragalactic radio sources their evolution their environment and their use as probes to solve other astrophysical problems He also makes extensive use of the large amount of data now available from observations at x ray optical and radio wavelengths to illustrate his main points *The Physics of Extragalactic Radio Sources* will be a comprehensive introduction to the field for graduate students and a useful summary for astrophysicists

Black Holes and Time Warps Kip S Thorne,1994 In this masterfully written and brilliantly informed work Dr Rhorne the Feynman Professor of Theoretical Physics at Caltech leads readers through an elegant always human tapestry of interlocking themes answering the great question what principles control our universe and why do physicists think they know what they know Features an introduction by Stephen Hawking *Progress in Physics, vol. 3/2011* Dmitri Rabounski,Florentin Smarandache,Larissa Borisova, The Journal on Advanced Studies in Theoretical and Experimental Physics including Related Themes from Mathematics

Experimental Physics including Related Themes from Mathematics *Theory of Atmospheric Radiative Transfer* Manfred Wendisch, Ping Yang, 2012-04-16 Aimed at the senior undergraduate and graduate level this textbook fills the gap between general introductory texts offering little detail and very technical advanced books written for mathematicians and theorists rather than experimentalists in the field The result is a concise course in atmospheric radiative processes tailored for one semester The authors are accomplished researchers who know how to reach their intended audience and provide here the content needed to understand climate warming and remote sensing for pollution measurement They also include supplementary reading for planet scientists and problems Equally suitable reading for geophysicists physical chemists astronomers environmental chemists and spectroscopists A solutions manual for lecturers will be provided on www.wiley-vch.de/supplements **Indian Astronomy** S. Balachandra Rao, 2000 *Empire of the Stars* Arthur I. Miller, 2005 A history of the idea of black holes explores the tumultuous debate over the existence of this now well accepted phenomenon focusing particular attention on Indian scientist Subrahmanyan Chandrasekhar *Eclipse: A Celestial Shadow Play* B. S. Shylaja, H. R. Madhusudan, 1999 **S. Chandrasekhar** Dilip M. Salwi, 2004 As a young man he presented a paper on astrophysics that was publicly ridiculed by the eminent astrophysicist A S Eddington However this did not stop S Chandrasekhar from becoming one of the giants of astrophysics and winning the Nobel Prize This is the story of a true polymath whose interests ranged from interstellar galaxies and neutron stars to classical music and English literature Recognised among the greatest astrophysicists of the twentieth century Chandrasekhar till his last day remained a true scientist devoted to his research his students and to sharing his knowledge with the astrophysicist community *Discovery and Classification in Astronomy* Steven J. Dick, 2013-09-09 Astronomical discovery involves more than detecting something previously unseen The reclassification of Pluto as a dwarf planet in 2006 and the controversy it generated shows that discovery is a complex and ongoing process one comprising various stages of research interpretation and understanding Ranging from Galileo's observation of Jupiter's satellites Saturn's rings and star clusters to Herschel's nebulae and the modern discovery of quasars and pulsars Steven J Dick's comprehensive history identifies the concept of extended discovery as the engine of progress in astronomy The text traces more than 400 years of telescopic observation exploring how the signal discoveries of new astronomical objects relate to and inform one another and why controversies such as Pluto's reclassification are commonplace in the field The volume is complete with a detailed classification system for known classes of astronomical objects offering students researchers and amateur observers a valuable reference and guide **Negative Frequency at the Horizon** Maxime Jacquet, 2018-04-26 This book is part of a large and growing body of work on the observation of analogue gravity effects such as Hawking radiation in laboratory systems The book is highly didactic skillfully navigating between concepts ranging from quantum field theory on curved space times nonlinear fibre optics and the theoretical and experimental foundations in the physics of optical analogues to the Event Horizon It presents a comprehensive field

theoretical framework for these systems including the kinematics governing the fields This allows an analytical calculation of the all important conversion of vacuum fluctuations into Hawking radiation Based on this emission spectra are computed providing unique insights into the emissions from a highly dispersive system In an experimental part the book develops a clear and systematic way to experimentally approach the problem and demonstrates the construction of an experimental setup and measurements of unprecedented sensitivity in the search for stimulation of the Hawking effect
