Animal Welfare Richard P. Haynes, 2008-07-27 Members of the animal welfare science community which includes both scientists and philosophers have illegitimately appropriated the concept of animal welfare by claiming to have given a scientific account of it that is more objectively valid than the more sentimental account given by animal liberationists This strategy has been used to argue for merely limited reform in the use of animals This strategy was initially employed as a way of sympathetically responding to the abolitionist claims of anti vivisectionists who objected to the use of animals in research It was subsequently used by farm animal scientists The primarily reformist as opposed to abolitionist goals of this community make the false assumption that there are conditions under which animals may be raised and slaughtered for food or used as models in scientific research that are ethically acceptable The tendency of the animal welfare science community is to accept this assumption as their framework of inquiry and thus to discount certain practices as harmful to the interests of the animals that they affect For example animal welfare is conceptualized in such a way that death does not count as harmful to the interests of animal nor prolonged life a benefit

Philosophy for a Better World Floris Van Den Berg, 2013-06-04 You won't see the world in the same light after reading this urgent and inspiring call to action. In this thought provoking book Dutch philosopher Floris van den Berg proposes a new perspective called universal subjectivism which can be adopted by anyone regardless of religious or philosophical orientation. It takes into consideration the universal capacity for suffering and through raising awareness seeks to diminish that suffering and increase happiness. With consistent and compelling moral reasoning van den Berg shows that the world can be organized to ensure more pleasure, beauty, justice, happiness, health, freedom, animal welfare and sustainability. The author emphasizes that today the near term future is our greatest challenge: our affluent western lifestyle will soon exceed the limits of the earth's sustainable capacity and must soon change drastically to ward off a worldwide environmental collapse. Knowing this we should all reevaluate the daily routines we take for granted: taking the car to work, boarding a plane to a business or vacation destination, eating meat or using plastic bags in stores. There are ethical and ecological objections to each of these examples. In fact, if we applied a strict ethical analysis to our lifestyle, almost nothing we do would pass muster. A lot of avoidable suffering attaches to our way of life. After reading this book, the world won't look the same. Concluding with an eco humanist manifesto, this book not only offers much food for thought but more importantly, an urgent and inspiring call to action.

On Animals David L. Clough, 2018-12-27 This book presents an authoritative and comprehensive survey of human practice in relation to other animals, together with a Christian ethical analysis building on the theological account of animals which David Clough developed in *On Animals*. Volume I: Systematic Theology, 2012. It argues that a Christian understanding of other animals has radical implications for their treatment by humans, with the human use and abuse of non-human animals for food the most urgent immediate priority. Following an introduction examining the task of theological ethics in relation to non-human animals and the way it relates to other accounts of animal ethics, this book surveys and assesses the use humans make of other animals for food, for clothing, for labour, as research subjects, for sport and entertainment, as pets or companions, and human impacts on wild animals. The result is both a state of the art account of what humans are doing to other animals and a persuasive argument that Christians in particular have strong faith-based reasons to acknowledge the significance of the issues raised and change their practice in response.

Korthals,2008-11-09 This book is an extensive original and systematic treatment of many important philosophical and ethical aspects of food consumption and production May we eat just anything Can we do everything with animals even genetic modification If not how can we regulate those processes so that they lead to optimum animal welfare while at the same time

producing optimum taste The production of food also causes environmental pollution does the fight against hunger have priority over the care of the environment The care of the environment animal welfare and the quality of food should be in a certain harmony but that is far from granted and hardly easy to achieve These factors are often in conflict with each other and a balance will thus need to be searched for Other factors to take into consideration are the issue of global famine the care for a farming class that is able to keep its head above water in a decent way and a fair trade system that does not throw up unnecessary barriers for newcomers or small market participants and that promotes good nutrition Famine continues to be a widespread phenomenon that violates human rights causing nearly a billion people to suffer from hunger or malnutrition At the same time deliberate hunger abundance and obesity are prevalent in the Western world Both issues refer to the social and cultural aspects of food Scientific and technological developments like genetic modification and functional food also play an increasingly important role almost every bite that we take is determined by scientific developments An extra difficulty is that scientific information is often contradictory or that it relies on statistical probabilities that are difficult to translate into everyday certitudes All of these factors deserve attention but it is the mix that is most important In the land of food either or does not exist only both and The adequate measure of both and serves as the starting point for this philosophical reflection Before Dinner is a must read for all people interested in contemporary ethical issues of food such as university students and researchers of food agricultural and life sciences as well as policymakers in these fields such as members of professional organisations focusing on food and agriculture f e EURSAFE European Society for Agriculture and Food Ethics the Agriculture Food and Human Values Society USA and European Federation of Biotechnology Muzzling a Movement Dara Lovitz,2025-11-11 Corporate greed and politics drive lawmakers to suppress the constitutional rights of animal rights activists Dara Lovitz offers in depth analysis of the pertinent legislative history as well as legal cases against these activists The United States government and its legislators have spent an inordinate amount of energy time and money enacting laws whose sole purpose is to disenfranchise silence and weaken the animal rights movement Muzzling a Movement offers an in depth analysis of the pertinent legislative history as well as various legal cases against these activists including the heavily publicized SHAC 7 case This updated version offers a fresh look at ag gag legislation which are laws specifically designed to prevent the public from witnessing the horrors that take place behind the opaque walls of animal agriculture Lovitz also highlights wisdom from activists of multiple generations as they reflect on their activism and the activism of their different aged compatriots What have newer activists learned from the underground movement of the 1990s What do the older activists think the younger activists are getting right And what are they getting wrong This comprehensive examination of the past present and future of animal rights activism seeks to bring us all closer to a cruelty free world Improving Animal Welfare Temple Grandin,2020-12-08 Completely revised updated and with four new chapters on sustainability new technologies precision agriculture and the future of animal welfare This book is edited by an outstanding world expert on

animal welfare it emphasizes throughout the importance of measuring conditions that compromise welfare such as lameness heat stress body condition and bruises during transport The book combines scientific information with practical recommendations for use on commercial operations and reviews practical information on livestock handling euthanasia slaughter pain relief and assessments of abnormal behavior Ethical Omnivores Samantha Noll, 2025-02-25 This book provides a detailed overview of ethical omnivorism as well as the philosophical foundations of this movement and diet Many eaters are concerned about the impact that their food choices have on the environment animals and human health Ethical omnivorism is at once a new food ethic diet and global movement aimed at providing a flexible path for eaters committed to bringing about lasting change one meal at a time While publications in food ethics are largely dominated by vegetarian titles this book explores the viability of omnivorism a dietary choice which is not devoid of animal products but one which embraces eating local eating organic and eating humanely raised food products In doing so this diet builds on the local food movement's desire to know where food comes from and stresses the importance of maintaining high animal welfare and environmental standards Overall this book provides a foundational overview of ethical omnivorism as a food movement and guidance for those interested in eating ethically while recognizing that many factors influence dietary choices This book will be of great interest to students and scholars of food studies food agriculture and animal ethics environmental philosophy and those more widely interested in making ethical food choices *Anthrozoology* Geoff Hosey, Vicky Melfi, 2018-11-30

Anthrozoology the study of human animal interactions HAIs has experienced substantial growth during the past 20 years and it is now timely to synthesise what we know from empirical evidence about our relationships with both domesticated and wild animals Two principal points of focus have become apparent in much of this research One is the realisation that the strength of these attachments not only has emotional benefits for people but confers health benefits as well such that a whole area has opened up of using companion animals for therapeutic purposes The other is the recognition that the interactions we have with animals have consequences for their welfare too and thus impact on their quality of life Consequently we now study HAIs in all scenarios in which animals come into contact with humans whether as pets companions farm livestock laboratory animals animals in zoos or in the wild This topical area of study is of growing importance for animals in animal management animal handling animal welfare and applied ethology courses and also for people within psychology anthropology and human geography at both the undergraduate and postgraduate level It will therefore be of interest to students researchers and animal managers across the whole spectrum of human animal contact
