Public Health Ethics Stephen Holland, 2007-09-17 How far should we go in protecting and promoting public health? Can we force people to give up unhealthy habits and make healthier choices, or does everyone have the right to decide their own lifestyle? Should we stop treating smokers who refuse to give up smoking? Should we put a tax on fatty foods and ban vending machines in schools to address the obesity epidemic? Should parents be required to have their children vaccinated? Are some of our screening programmes unethical? Down's syndrome screening, for example, or should we be screening people for more conditions such as Huntington's disease? Such questions are at the heart of public health ethics. Holland shows that to understand and debate these issues requires philosophy: moral philosophies such as utilitarianism and deontology, as well as political philosophies such as liberalism and communitarianism. And philosophy informs other aspects of public health, such as

epidemiology and health promotion The aim of this book is to provide a lively accessible and philosophically informed introduction to such issues It is an ideal textbook for students taking courses in public health ethics And since this book develops systematic discussions of issues in public health ethics there is also much here to engage and challenge the more advanced reader

Health and the Good Society Alan Cribb, 2005-10-13 The goals of healthcare and health policy and the health related dilemmas facing policy makers professionals and citizens are extensively analysed and debated in a range of disciplines including public health sociology and applied philosophy Health and the Good Society is the first full length work that addresses these debates in a way that cuts across these disciplinary boundaries Alan Cribb's core argument is that clinical ethics needs to be understood in the context of public health ethics This entails healthcare ethics embracing the social dimension of health in two overlapping senses first the various respects in which health experiences and outcomes are socially determined and second the ways in which health related goods are better understood as social rather than purely individual goods This broader approach to the ethics of healthcare includes a concern with the social construction of both healthcare goods and the roles ideals and obligations of agents that is to say it focuses upon the value field of health related action and not only upon the ethics of action within this value field This groundbreaking book thus seeks to open up the agenda of healthcare ethics both methodologically and substantively it argues that population oriented perspectives are central to all healthcare ethics and that everybody has some share of responsibility for securing health related goods including the good of greater health equality One of its major conclusions is that the rather limited tradition of health education policy and practice needs a complete re think
