Called Home Kim R. Manturuk, Mark R. Lindblad, Roberto G. Quercia, 2017-09-01 Since the onset of the mortgage lending crisis and the subsequent Great Recession there has been ongoing debate about the economic benefits of homeownership. Some say homeownership remains an important contributor to wealth creation while others believe that renting is a less expensive and less risky option. This debate has raised an interesting question about homeownership: if the home is not guaranteed to provide a solid return on investment, is there a rationale for promoting homeownership beyond whatever financial benefits it may deliver? The authors' research has provided tremendous insights into the extra financial effects of affordable homeownership. It shows that homeowners, when compared with renters, have better health outcomes, experience less stress in times of financial hardship, experience a greater sense of trust in their neighbors, have access to more social capital resources, and are more likely to vote. Further, the data allows us to explore not only what benefits result from affordable homeownership but how and why these benefits are transferred. The book ultimately argues that homeownership is not only important for financial reasons but also functions as a social tool that can improve the lives of low and moderate income people.

Finance and Law in the Metaverse World

Nadia Mansour, Lorenzo M. Bujosa Vadell, 2024-12-05 This edited volume examines the impact of the metaverse on finance and law As the commercial development of the internet and digital technology has done for more than thirty years the metaverse phenomenon raises questions about the relevance of existing legal rules in dealing with new practices between the need for adaptation evolution or new rules While the Blockchain ecosystem has developed steadily over the last few years and its applications are still evolving can we assume that the metaverse will become the most prodigious phenomenon of the 21st century The term metaverse refers to a virtual world Technically using known but evolving technologies the term refers to a network of 3D virtual worlds In its current state of development there is a metaverse and not a single virtual world as there is an internal one simply because its development is still dependent on proprietary technologies The development of the metaverse is no less accurate and a few recent examples suggest that lawyers will not be able to escape this phenomenon which looks set to involve individuals companies and institutions The financial world is not immune to the emergence of the metaverse either Traditional finance is moving into new virtual worlds Several banks and insurance companies are entering this world far removed from their traditions Some have even set up branches there However what are these financial institutions trying to achieve by entering this market segment This book addresses these questions with contributions from academics and experts from both fields
