Comparison and Harmonisation of Denominator Data for Primary Health Care Research in Countries of the European Community Martin Schlaud,1999 Used extensively in North America and Europe seminal practice networks also referred to as practice research networks recruit office based physicians

to monitor defined events among their patients such as influenza mumps and asthma attacks at regional county and even national levels After adequate analysis these data indicate spatial and temporal trends in event frequencies comparability of national results is however limited partly due to the different national health systems influencing the demand of medical care More importantly the lack of comparable data on the population from which the cases arise denominator data obstructs the comparison of data from primary care research between different regions or countries

Epidemiology and Health Services Haroutune K. Armenian, Sam Shapiro, 1998 What is the relevance of epidemiology to decision making in the health services If our ability to launch large scale experimental studies of health services is limited what are some alternative approaches to study design How can we best make use of routinely collected data from health information systems How can we best synthesize information to make more reasonable inferences Epidemiology and Health Services is different from other books in the field Many books and specialized publications have presented a comprehensive picture of epidemiologic methods but they have not shown in a systematic way how these methods apply to health services This book fills the gap and goes even further by analyzing the strengths and limitations of epidemiologic methods in the context of health care delivery and discussing approaches for making pertinent inferences in actual cases The book addresses the needs of a broad spectrum of health professionals It will help health service administrators managers and other professionals design and conduct evaluative and intervention research on the delivery of health services It will also give epidemiology and public health students a wider perspective on the various applications of the discipline
