Evaluation And Optimization Of Electoral Systems:

Evaluation and Optimization of Electoral Systems Pietro Grilli di Cortona,Cecilia Manzi,Aline Pennisi,Federica Ricca,Bruno Simeone,1999-01-01 This monograph offers a systematic quantitative approach to the analysis evaluation and design of electoral systems Today electoral reform is of concern to newborn democracies as well as many old ones The authors use mathematical models and automatic procedures when possible to solve some of the problems that arise in the comparison of existing systems as well as in the construction of new ones One distinctive feature of the book is the emphasis on single and multiple criteria optimization methods This powerful tool kit will help political researchers evaluate and choose an appropriate electoral system A general formal model is included as well as a coding system to describe identify and classify electoral systems Evaluation criteria and the corresponding performance indicators are discussed *The Politics of Electoral Reform in Central Europe since 1989* Jakub Charvát,2023-11-06 This book on the politics of electoral reform in Central Europe since 1989 explains by whom why and how the electoral rules were changed in Central Europe in the post Communist period Examining the contextual factors affecting underlying and or initiating these changes the book identifies main actors their motivations and other circumstances surrounding the electoral reform processes It further explores their political consequences particularly on proportionality and personalization Based on a detailed analysis of electoral reform processes in Czechoslovakia Czechia Hungary and Slovakia over the past thirty years the book discusses how the politics of electoral reform in Central Europe is mostly driven controlled and decided by politicians with other actors being either overlooked or ignored Finally it argues that most of the cases were imposed by an elite majority with the sole exception of the Czech Republic where the politics of electoral reform were influenced by the intervention of the constitutional court as an external actor The book will appeal to students researchers and scholars of political science interested in a better understanding of electoral politics in general as well as democratic transformation processes and electoral reform in Central Europe The Handbook of Electoral System Choice J. Colomer,2016-01-05 The topic of electoral reform is an extremely timely one The accelerated expansion of the number of new democracies in the world generates increasing demand for advice on the choice of electoral rules at the same time a new reformism in well established democracies seeks new formulae favouring both more representative institutions and more accountable rulers The Handbook of Electoral System Choice addresses the theoretical and comparative issues of electoral reform in relation to democratization political strategies in established democracies and the relative performance of different electoral systems Case studies on virtually every major democracy or democratizing country in the world are included **Proportional Optimization and Fairness** Wieslaw Kubiak,2008-11-16 Proportional Optimization and Fairness is a long needed attempt to reconcile optimization with apportionment in just in time JIT sequences and find the common ground in solving problems ranging from sequencing mixed model just in time assembly lines through just in time batch production balancing workloads in event graphs to bandwidth

allocation internet gateways and resource allocation in computer operating systems The book argues that apportionment theory and optimization based on deviation functions provide natural benchmarks for a process and then looks at the recent research and developments in the field Individual chapters look at the theory of apportionment and just in time sequences minimization of just in time sequence deviation optimality of cyclic sequences and the oneness bottleneck minimization competition free instances Fraenkel s Conjecture and optimal admission sequences response time variability applications to the Liu Layland Problem and pinwheel scheduling temporal capacity constraints and supply chain balancing fair queuing and stride scheduling and smoothing and batching   **Advances in Economic Design** Murat R. Mathematics and Democracy Steven J. Brams,2009-12-02 Voters today often desert a preferred candidate for a more viable second choice to avoid wasting their vote Likewise parties to a dispute often find themselves unable to agree on a fair division of contested goods In Mathematics and Democracy Steven Brams a leading authority in the use of mathematics to design decision making processes shows how social choice and game theory could make political and social institutions more democratic Using mathematical analysis he develops rigorous new procedures that enable voters to better express themselves and that allow disputants to divide goods more fairly One of the procedures that Brams proposes is approval voting which allows voters to vote for as many candidates as they like or consider acceptable There is no ranking and the candidate with the most votes wins The voter no longer has to consider whether a vote for a preferred but less popular candidate might be wasted In the same vein Brams puts forward new more equitable procedures for resolving disputes over divisible and indivisible goods   Distributed Computing David Peleg,2000-01-01 Gives a thorough exposition of network spanners and other locality preserving network representations such as sparse covers and partitions   *Discrete Convex Analysis* Kazuo Murota,2003-01-01 Discrete Convex Analysis is a novel paradigm for discrete optimization that combines the ideas in continuous optimization convex analysis and combinatorial optimization matroid submodular function theory to establish a unified theoretical framework for nonlinear discrete optimization The study of this theory is expanding with the development of efficient algorithms and applications to a number of diverse disciplines like matrix theory operations research and economics This self contained book is designed to provide a novel insight into optimization on discrete structures and should reveal unexpected links among different disciplines It is the first and only English language monograph on the theory and applications of discrete convex analysis Discrete Convex Analysis provides the information that professionals in optimization will need to catch up with this new theoretical development It also presents an unexpected connection between matroid theory and mathematical economics and expounds a deeper connection between matrices and matroids than most standard textbooks   **Algebraic Theory of Automata Networks** Pal Domosi,Chrystopher L. Nehaniv,2005-01-01 Investigates automata networks as algebraic structures and develops their theory in line with other algebraic theories such as those of semigroups groups rings and fields The authors also investigate automata networks as products of automata that is as compositions of automata obtained by cascading without feedback or with feedback of various restricted types or most generally with the feedback dependencies controlled by an arbitrary directed graph They survey and extend the fundamental results in regard to automata networks including the main decomposition theorems of Letichevsky of Krohn and Rhodes and of others   **Complexity Classifications of Boolean Constraint Satisfaction Problems** Nadia Creignou,Sanjeev Khanna,Madhu Sudan,2001-01-01 Presents a novel form of a compendium that classifies an infinite number of problems by using a rule based approach   **Hiv/vaccine Needs - Proceedings Of The Internaional Seminar On Planetary**
