Evaluation in Environmental Planning , 1980 **Trade-Off Analysis for Environmental Projects: An Annotated**

Bibliography , **Energy Abstracts for Policy Analysis** , 1981 Environmental Guidelines for Settlements Planning and Management: Environmental considerations in metropolitan planning and management (MPM) United Nations Centre for Human Settlements, 1987 Environmental Policy Analysis and Practice Michael R Greenberg, 2008-03-13

Pressing environmental challenges are frequently surrounded with stakeholders on all sides of the issues. Opinions expressed by government agencies, the private sector, special interests, nonprofit communities, and the media among others can quickly cloud the dialogue, leaving one to wonder how policy decisions actually come about. In *Environmental Policy Analysis and Practice*, Michael R Greenberg cuts through the complicated layers of bureaucracy, science, and the public interest to show how all policy considerations can be broken down according to six specific factors: 1. the reaction of elected government officials, 2. the reactions of the public and special interests, 3. knowledge developed by scientists and engineers, 4. economics, 5. ethical imperatives, and 6. time pressure to make a decision. The book is organized into two parts: the first part defines and illustrates each one of these criteria. Greenberg draws on examples such as nuclear power, pesticides, brownfield redevelopment, gasoline additives, and environmental cancer, but focuses on how these subjects can be analyzed rather than exclusively on the issues themselves. Part two goes on to describe a set of over twenty tools that are used widely in policy analysis, including risk assessment, environmental impact analysis, public opinion surveys, cost-benefit analysis, and others. These tools are described and then illustrated with examples from part one. Weaving together an impressive combination of practical advice and engaging first-person accounts from government officials, administrators, and leaders in the fields of public health and medicine, this clearly written volume is poised to become a leading text in environmental policy.

Environmental Management in Practice: Vol 1 Paul Compton, Dimitri Devuyst, Luc Hens, Bhaskar Nath, 2013-01-11

Focuses on the instruments and tools currently available to the environmental manager. A theoretical background to the instruments is given together with an overview of those instruments that are in common use today, with particular attention to the physical, economic, legislative, and communication instruments.

Environmental Impact Assessment Peter Wathern, 2013-02-01. This comprehensive treatment of environmental impact assessment (EIA) provides an authoritative contemporary review of theory and practice over the past ten years. EIA is viewed as both science and art, reflecting the concern both with technical aspects of appraisal and the effects of EIA on the decision-making process. Adopted in many countries with different degrees of enthusiasm since its inception in the early 1970s, EIA is established as a major procedure for assessing the environmental implications of legislation, the implementation of policy and plans, and the initiation of development projects. EIA is increasingly an essential part of environmental management.

Infrastructure Management J.J. Boland, M.E. Bell, Eugene Z. Stakhiv, 2013-06-29 Environmental issues continue to burden governments and economies throughout the post communist countries of Central and Eastern Europe and the newly independent states of the former Soviet Union Severe environmental degradation is endemic to the region the existing environmental infrastructure is often inadequate significant new investment is perhaps decades away and there is little knowledge of advanced techniques for impact assessment project evaluation and project financing The first two papers of Environmental Infrastructure Management survey available cost effective technology for solid waste treatment and air pollution control providing guidance for possible incremental additions to existing infrastructure There is also a discussion of transferable pollution credits as an instrument in regulating air quality The discussion of economic incentives also embraces user fees and other pollution control instruments A range of methods is presented for the evaluation and comparison of alternative projects where data are poor or scarce Canadian experience with specific capital budgeting techniques is given comprehensive attention Debt financing strategies are addressed in the context of present day Ukraine Finally an outline is given of a general framework for making decisions about environmental projects including the use of environmental impact assessments

Improving Impact Assessment Stuart L Hart, 2019-03-04 As Environmental Impact Statements EIS become increasingly important in the policymaking process it is vital that they be as complete and accurate as possible The authors of this volume consider ways in which the development and evaluation of scientific and technical information for EIS can be improved Addressing key legal social political

Managing European Coasts Jan E. Vermaat,Laurens Bouwer,Kerry Turner,W. Salomons,2005-09-26 Coastal zones play a key role in Earth System functioning and form an edge for society providing a significant contribution to the life support systems Goods and services derived from coastal systems depend strongly on multiple transboundary interactions with the land atmosphere open ocean and sea bottom Increasing demands on coastal resources driven by human habitation food security recreation and transportation accelerate the exploitation of the coastal landscape and water bodies Many coastal areas and human activities are subject to increasing risks from natural and man induced hazards such as flooding resulting from major changes in hydrology of river systems that has reached a global scale Changes in the hydrological cycle coupled with changes in land and water management alter fluxes of materials transmitted from river catchments to the coastal zone which have a major effect on coastal ecosystems The increasing complexity of underlying processes and forcing functions that drive changes on coastal systems are witnessed at a multiplicity of temporal and spatial scales

Cost-Benefit Analysis Euston Quah,Raymond Toh,2011-10-20 Cost benefit analysis CBA is the

systematic and analytical process of comparing benefits and costs in evaluating the desirability of a project or programme often of a social nature and for society as a whole CBA is fundamental to government decision making and can be an effective tool for informed decisions on the use of society's scarce resources This book highlights the main concepts and principles of cost benefit analysis used in real life cases and actual applications The book contains rich cases materials and examples of real life CBA applications with emphasis both on physical and non physical projects and infrastructure developments in Asia and beyond The book also discusses techniques frequently used in applied CBA The first part of the book introduces the key concepts and principles of CBA before Part Two covers some pertinent issues relating to CBA such as the recent trend of using behavioural economics and frequently used techniques in applied CBA Finally in Part Three case studies are written up to illustrate how CBA is done and questions for the readers and students to ponder are raised at the end of each chapter The scope of the case studies is more than just physical infrastructures but will include public sector policies and programmes covering a host of social policies as in health education social welfare programmes and the environment For each case there will be illustrations of the key concepts and principles of CBA used Undertakings analyzed include the Three Gorges Dam in China the 2008 Beijing Olympics the Costs of Global Warming the Jamuna Bridge in Bangladesh The case studies many of which have taken or are to take place in developing countries provide a rich background to the principles of the method and are accompanied by a wealth of explanatory material As well as being suitable for courses in Cost Benefit Analysis Public Finance Environmental and Health Economics the book should be of interest to all public policy decision makers and planners

Ranking Hazardous-Waste Sites for Remedial Action National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Remedial Action Priorities for Hazardous Waste Sites, 1994-02-01 The United States may not be able to make all hazardous waste sites as clean as possible Therefore priorities must be set for the timing of waste site remediations This book assesses several of the government's methods of ranking sites for remediation and compares the performance of three such models using input data developed from the same set of waste sites Because inconsistent methods may be neither effective nor prudent the book recommends that the government consider developing a unified national approach to setting priorities to replace the current multiple approaches

Energy Possibilities Jesse S. Tatum, 1995-08-31 Using the perspectives of science technology and society studies this book grapples with questions stimulated by a concern that current energy policies and practices reflect neither the best interests of ordinary people nor decision making consistent with the traditions and aspirations of democracy Probing the depths of assumptions made in traditional analysis and assembling minority views present practices come into focus as startlingly narrow social constructs amidst a vast unexplored terrain of material and socio cultural possibilities Questions of power and responsible action are pursued in this context casting both traditional decision makers and citizens in less than a positive light The author includes an examination of the experience of the home power movement not as The Solution to our

energy problems but as a concrete illustration of alternative theory and practice and of the range of possibilities inherent in energy decisions. The book aims not at recommendations for prescriptive public policy but primarily at refocusing the reader's attention as ultimate policy maker on the core of the energy question: How do we wish to live in the world?
