Occurring Toxicants Joint FAO/WHO Expert Committee on Food Additives. Meeting, International Program on Chemical Safety, 1993 **Analysis of Naturally Occurring Food Toxins of Plant Origin** Leo M.L. Nollet, Javed Ahmad, 2022-12-02

Natural toxins are toxic compounds that are naturally produced by living organisms. These toxins are not harmful to the organisms themselves but they may be toxic to other creatures including humans when eaten. These chemical compounds have diverse structures and differ in biological function and toxicity. Some toxins are produced by plants as a natural defense mechanism against predators, insects, or microorganisms or as a consequence of infestation with microorganisms such as mold in response to climate stress such as drought or extreme humidity. Well-known groups of natural toxins of plant origin are cyanogenic glycosides, pyrrolizidine alkaloids, furocoumarins, lectins, and glycoalkaloids. These plant origin natural toxins can cause a variety of adverse health effects and pose a serious health threat to both humans and livestock. Analysis of Naturally Occurring Food Toxins of Plant Origin is divided into three sections that provide a detailed overview of different classes of food toxins that are naturally found in plants, including various analytical techniques used for their structural characterization, identification, detection, and quantification. This book provides in-depth information and comprehensive discussion over quantitative and qualitative analysis of natural toxins in plant-based foods. Key Features: Provides a detailed overview of different classes of natural toxins found in plants. Explains how IR, NMR, and mass spectrometry are utilized in characterization and identification. Describes applicability of HPLC, LC-MS, GC-MS, and HPTLC techniques for detection and quantification. Discusses progress in the field related to capillary electrophoresis, ELISA, and biosensors for quantitative application of these techniques. Toxicological Evaluation of Certain Food Additives and Naturally Occurring Toxicants Joint FAO/WHO Expert Committee on Food Additives, World Health Organization, 1993 **Food Additive** Yehia El-Samragy, 2012-02-22. A food additive is defined as a substance not normally consumed as a food in itself and not normally used as a characteristic ingredient of food, whether or not it has nutritive value. Food additives are natural or manufactured substances which are added to food to restore colors lost during processing, they provide sweetness, prevent deterioration during storage, and guard against food poisoning, preservatives. This book provides a review of traditional and non-traditional food preservation approaches and ingredients used as food additives. It also provides detailed knowledge for the evaluation of agro-industrial wastes based on their great potential for the production of industrially relevant food additives. Furthermore, the assessment of potential reproductive and developmental toxicity perspectives of some newly synthesized food additives on the market has been covered.

Finally the identification of the areas relevant for future research has been pointed out indicating that there is more and more information needed to explore the possibility of the implementation of some other materials to be used as food additives
