**Écoscience** ,1994 *Behavioural and Ecological Consequences of Urban Life in Birds* Caroline Isaksson,Amanda D.

Rodewald,Diego Gil,2018-06-19 Urbanization is next to global warming the largest threat to biodiversity Indeed it is becoming increasingly evident that many bird species get locally extinct as a result of urban development However many bird species benefit from urbanization especially through the abundance of human provided resources and increase in abundance and densities These birds are intriguing to study in relation to its resilience and adaption to urban environments but also in relation to its susceptibility and the potential costs of urban life This Research Topic consisting of 30 articles one review two meta analyzes and 27 original data papers provides insights into species and population responses to urbanization through diverse lenses including biogeography community ecology behaviour life history evolution and physiology *The Impact of Weather on the Behavior and Ecology of Birds* Stuart Peter Sharp,Mark C. Mainwaring,Andreas Nord,2021-12-29

*The Mediterranean Region* Jacques Blondel,2010-01-28 This is a detailed illustrated and up to date study of the fauna flora landscapes coastal areas and seascapes of the entire Mediterranean Basin and the Sea itself Since the publication of the first edition in 1999 the field has advanced in significant ways and this revision is timely **Proceedings** ,2006 *Acta ornithologica* ,2007

**Ecology Abstracts** ,2000 Coverage 1982 current updated monthly This database covers current ecology research across a wide range of disciplines reflecting recent advances in light of growing evidence regarding global environmental change and destruction Major ares of subject coverage include Algae lichens Animals Annelids Aquatic ecosystems Arachnids Arid zones Birds Brackish water Bryophytes pteridophytes Coastal ecosystems Conifers Conservation Control Crustaceans Ecosystem studies Fungi Grasses Grasslands High altitude environments Human ecology Insects Legumes Mammals Management Microorganisms Molluscs Nematodes Paleo ecology Plants Pollution studies Reptiles River basins Soil TAiga tundra Terrestrial ecosystems Vertebrates Wetlands Woodlands **Canadian Journal of Zoology**

,2005-04 **Quantitative Genetics in the Wild** Anne Charmantier,Dany Garant,Loeske E. B. Kruuk,2014 Although the field of quantitative genetics the study of the genetic basis of variation in quantitative characteristics such as body size or reproductive success is almost 100 years old its application to the study of evolutionary processes in wild populations has expanded greatly over the last few decades During this time the use of wild quantitative genetics has provided insights into a range of important questions in evolutionary ecology ranging from studies conducting research in well established fields such as life history theory behavioural ecology and sexual selection to others addressing relatively new issues such as populations responses to climate change or the process of senescence in natural environments Across these fields there is increasing appreciation of the need to quantify the genetic rather than just the phenotypic basis and diversity of key traits the genetic basis of the associations between traits and the interaction between these genetic effects and the environment This research

activity has been fuelled by methodological advances in both molecular genetics and statistics as well as by exciting results emerging from laboratory studies of evolutionary quantitative genetics and the increasing availability of suitable long term datasets collected in natural populations especially in animals Quantitative Genetics in the Wild is the first book to synthesize the current level of knowledge in this exciting and rapidly expanding area This comprehensive volume also offers exciting perspectives for future studies in emerging areas including the application of quantitative genetics to plants or arthropods unraveling the molecular basis of variation in quantitative traits or estimating non additive genetic variance Since this book deals with many fundamental questions in evolutionary ecology it should be of interest to graduate post graduate students and academics from a wide array of fields such as animal behaviour ecology evolution and genetics

Provides a timely and authoritative account of Life History Evolution by a multidisciplinary team of scholars and researchers from around the world Life History Evolution Traits Interactions and Applications presents a cutting edge synthesis of the mechanisms driving life history strategies that span the breadth of taxa from bacteria to humans Integrating classical and contemporary perspectives this comprehensive volume addresses how organisms evolve traits in response to diverse ecological pressures Editors Michal Segoli and Eric Wajnberg bring together leading experts to explore the intersection of evolutionary biology ecology and applied research focusing on the evolving complexity of life history traits and their implications In depth yet accessible chapters cover a broad spectrum of life history traits from classical traits of lifespan and reproduction to more complex interactions like social behaviour predator prey dynamics and human induced evolutionary processes The contributing authors explain essential concepts identify critical knowledge gaps discuss future research directions and demonstrate the relevance of life history evolution in addressing climate change species invasion pollution and more Providing a well balanced understanding of life history traits and their implications Life History Evolution Incorporates recent advances in evolutionary theory including eco evolutionary feedback loops and anthropogenic impacts Offers diverse perspectives and original research from leading experts in fields such as evolutionary biology ecology entomology zoology agriculture and veterinary medicine Discusses life history evolution in the context of co evolved interactions such as predator prey parasite host plant herbivore and endosymbiont host relationships Provides an overview of the foundational theory

recent developments and current thinking in the field Features numerous case studies that highlight real world applications in biological control wildlife management climate change adaptation and others Revealing how life history traits shape the evolutionary strategies of organisms Life History Evolution Traits Interactions and Applications is an essential resource for undergraduate and graduate students researchers industry professionals and policymakers in ecological science It is an ideal textbook for courses in evolutionary ecology evolutionary biology conservation biology environmental science and environmental management

**Current Ornithology Volume 17** Charles F. Thompson, 2010-09-09 Current Ornithology publishes authoritative up to date scholarly reviews of topics selected from the full range of current research in avian biology Topics cover the spectrum from the molecular level of organization to population biology and community ecology The series seeks especially to review 1 fields in which an abundant recent literature will benefit from synthesis and organization or 2 newly emerging fields that are gaining recognition as the result of recent discoveries or shifts in perspective or 3 fields in which students of vertebrates may benefit from comparisons of birds with other classes All chapters are invited and authors are chosen for their leadership in the subjects under review

**Current Advances in Ecological & Environmental Sciences**, 1995    *Ornis Svecica*, 1999    **Animal Behaviour** Peter M. Kappeler, 2022-01-26 This textbook presents all

basic principles of animal behaviour in a clear and concise manner and illustrates them with up to date examples Emphasis is placed on behavioural biology as an integrative discipline of organismic biology focusing on the adaptive value of behaviours that facilitate resource access predator avoidance and reproductive success and underlie parental care all within a comprehensive presentation of social complexity This new textbook provides a rich resource for students and teachers from a wide range of life science disciplines

*Hormones, Brain and Behavior*, 2016-11-09 Hormones Brain and Behavior Third Edition offers a state of the art overview of hormonally mediated behaviors including an extensive discussion of the effects of hormones on insects fish amphibians birds rodents and humans Entries have been carefully designed to provide a valuable source of information for students and researchers in neuroendocrinology and those working in related areas such as biology psychology psychiatry and neurology This third edition has been substantially restructured to include both foundational information and recent developments in the field Continuing the emphasis on interdisciplinary research and practical applications the book includes articles aligned in five main subject sections with new chapters included on genetic and genomic techniques and clinical investigations This reference provides unique treatment of all major vertebrate and invertebrate model systems with excellent opportunities for relating behavior to molecular genetics The topics cover an unusual breadth from molecules to ecophysiology ranging from basic science to clinical research making this reference of interest to a broad range of scientists in a variety of fields Comprehensive and updated coverage of a rapidly growing field of research Unique treatment of all major vertebrate and invertebrate model systems with excellent opportunities for relating behavior to molecular genetics Covers an unusual breadth of topics and subject fields ranging from molecules to
