Genetic Analysis Of The Cell Surface:

Genetic Analysis of the Cell Surface P. Goodfellow, 2013-12-11 The cell surface is the barrier between the cell and its environment which regulates the flow of both simple and complex molecules into and out of the cell it is also the organelle responsible for communication between the cell and its environment Each cell expresses receptors for a wide variety of hormones growth factors growth substrates and other cells In multicellular organisms communication between cells is required for controlling development cellular differentiation morphogenesis and in a more general sense integration of myriad cell types into a single organism The series Receptors and Recognition has as its overall aim the dissection of the cell surface to correlate structure and function for this complex organelle In most of the preceding volumes the approach has been biochemical or physiological In this volume the mammalian cell surface is analysed by a genetic approach Genetic analysis of the cell surface especially when combined with immunological techniques has a long history In 1900 Landsteiner showed that serum from one individual could agglutinate the red cells of another Besides the practical result of making blood transfusion safe this was the first demonstration of a human genetic polymorphism and for the next 50 years the red blood cell surface provided most of the genetic markers used to study human populations

Mannweiler, 2012-12-06 Es ist ja ganz einerlei wer es gefunden hat die Hauptsache ist daß es gefunden worden ist This was said by Hermann Wilbrand director of the department of ophthalmology at the university hospital Hamburg Eppendorf 1919 1923 when others claimed priority for the long searched for cortical visual center which he had discovered Five years ago we tried in Wilsede an unusual experiment bringing together for three long days and nights scientists and medical doctors to learn like students about each others work The hope was that the participants in the workshop would discuss the whole problem of human leukemia and cooperative programmes among the different specialized research groups and medical centers would be stimulated Now five years later we feel that the experiment was a success Cooperative research programmes around the world were started and most of us understand more and more the Frederic Stohlman question about the practical application of our research and its benefit for the patient The chairman have done a tremendous job organizing an up to date scientific programme for the third Wilsede meeting I would like to thank all of them for a programme which includes all the important results and future aspects of human leukemia Dynamic Aspects of Cell Surface Organization George Poste, Garth L. Nicolson, 2013-10-22 Cell Surface Reviews Volume 3 Dynamic Aspects of Cell Surface Organization reviews the progress in the study of the dynamic nature of membrane organization The book is

comprised of 14 chapters that discuss the various areas of concerns relating to membrane dynamics The coverage of the text includes techniques and methods employed in the analysis and manipulation of the various aspects of cell membranes such as freeze fracture techniques manipulation of the lipid composition of cultured animal cells and somatic genetic analysis The book also talks about some of the traits and behaviors of membrane dynamics including shedding of tumor cell surface antigens dynamics of antibody binding and complement interactions at the cell surface and structure and function of surface immunoglobulin of lymphocytes The text will be of great use to microbiologists biochemists and other researchers whose work requires a good understanding of the various aspects of cells
