The New Alchemists Mariano Bizzarri, 2012 Fifteen years after the first genetically modified GM seeds and food only four GM plants have achieved significant market positions corn cotton rapeseed and soybeans Most of the other new constructs have caused unsolved problems or are only at the project stage demonstrating the complexity of the task facing biotech companies Doubts are also emerging about the real economic and agronomic benefits of genetically modified organisms Little is known about their potential for upsetting environmental biodiversity in an irreversible way Worries about their impact on human health have not been dispelled but have increased with the evident incapacity of current international standards to ensure controls and enforcement Reliable risk assessment models and methodologies have not yet been developed and cannot be expected soon this makes it impossible to assess the nature qualitative aspects and extent quantitative aspects of the risks and prevents estimates based on the risk benefit ratio In this situation it seems prudent to resort to the precautionary principle defined in the Cartagena Protocol and incorporated in the Rio Declaration The stakes are high and discussion needs to be brought to a level of scientific proof that leaves no room for ambiguity or
