**Precambrian Geology of China** Mingguo Zhai, 2015-08-11 This book is the first contribution to the overview of Precambrian geology of China. It covers Precambrian geology of the North China Craton, the South China Craton and the Tarim Craton as well as other smaller blocks in the Chinese orogenic belts. It provides systematic concepts of the Chinese paleo continents and incorporates the most up to date achievements. Edited by many of the active researchers working at the forefront of the related fields, it contributes greatly to the international Precambrian geology community and would be of interest to geoscientists working in the research field of geology of China and Precambrian geodynamics. *A Study in Earth's Geological Evolution* Nikolay O. Sorokhtin, Nikolay E. Kozlov, Viktor N. Glaznev, Eugeny V. Martynov, 2020-08-25 A valuable resource for geologists, engineers and students across multiple disciplines, this is the most comprehensive and in depth study of the development of the Baltic Shield, its features as a representative of other similar areas around the world and the implications for practical applications such as oil and ore production. Like Sorokhtin's most recent book *The Origins of Natural Diamonds*, also available from Wiley Scrivener at [www.wiley.com](http://www.wiley.com), this is not just the story of the origin and evolution of the Baltic Shield but a story about the evolution of the Earth's geology in general. Important to geologists, geophysicists and engineers across multiple disciplines, written by experts on the Earth's geological evolution, this volume represents the state of the art in major Earth geological processes. Of particular importance to mining engineers and petroleum engineers, it is also a practical guide for those who work in the mining or petroleum industry. Before presenting the most in depth discussion of the Baltic Shield available and its implications for study by geologists and various industries such as the petroleum industry, the authors present a theory for how the Earth as we know it came into existence and developed. They base this theory on scientific evidence and mathematical models, using this as a basis for further explanation of the Earth's geological evolution. Valuable as either a learning tool for the student or as a reference or refresher for the veteran scientist or engineer, the authors explain important geological processes such as the Earth's origin, composition and structure, the Earth's energy balance, continental drift, tectonic activity, the evolution of the Earth's crust and others. It is within this geological framework that the authors offer practical guidance for engineers and scientists who work in industry or academia. It is a must have for any geologist, geophysicist or engineer working in mining or petroleum engineering. *The Geologic Systems*, 1965 **The Geological Record of Neoproterozoic Glaciations** Emmanuelle Arnaud, Galen P. Halverson, Graham Shields-Zhou, 2011 In recent years, interest in Neoproterozoic glaciations has grown as their pivotal role in Earth system evolution has become increasingly clear. One of the main goals of the IGCP Project number 512 was to produce a synthesis of newly available information on Neoproterozoic successions worldwide. This Memoir consists of a series of overview chapters followed by site specific chapters. The overviews cover key topics including the history of research on Neoproterozoic glaciations, identification of glacial deposits, chemostratigraphic techniques and datasets, palaeomagnetism.

biostratigraphy geochronology and climate modelling The site specific chapters include reviews of the history of research on these rocks and up to date syntheses of the structural framework tectonic setting palaeomagnetic geochronological constraints physical biological and chemical stratigraphy and descriptions of the glaciogenic and associated strata including economic deposits      **Geological Correlation** ,1978      **Journal of Research of the U.S. Geological Survey** Geological Survey (U.S.),1978 Scientific notes and summaries of investigations in geology hydrology and related fields      *International Geological Correlation Programme IGCP* International Geological Correlation Programme,1978      **The Geologic Systems** Kalervo Rankama,1965      *Mineral Resource Potential and Geology of the San Juan National Forest, Colorado* Richard E.
