Geological Methods For Archaeology:

Geological Methods for Archaeology Norman Herz, Ervan G. Garrison, 1997-12-18 This book discusses the application of geological methods and theory to archaeology. Written as a survey text covering appropriate methods and techniques taken from geology, geophysics, geochemistry, and geochronology, it shows the student the practicality and importance of each technique's use in solving archaeological problems. Specific techniques are illustrated by practical results obtained from the authors' use on archaeological digs. With an international geographical scope, the book draws on sites from both hemispheres, including the Franchthi Cave in Greece, St. Catherine's Island in the U.S., the Roman site of Drand in France, and Monte Verde, Chile. The authors also address applications in less traditional areas such as underwater, historical, industrial, and conservation archaeology.

Techniques in Archaeological Geology Erv Garrison, 2013-03-09 The archaeological geology of the Quaternary or the geological epoch during which humankind evolved is a scientific endeavor with much to offer in the fields of archaeology and palaeoanthropology. Earth science techniques offer diverse ways of characterizing the elements of past landscapes and archaeological facies. This book is a survey of techniques used in archaeological geology for the study of soils, sediments, rocks, and minerals. The techniques presented represent those most commonly used today. They are discussed in detail, and examples are provided in many cases to demonstrate their usefulness to archaeologists.

Soils in Archaeological Research
Vance T. Holliday, 2004-08-19 Soils invaluable indicators of the nature and history of the physical and human landscape have strongly influenced the cultural record left to archaeologists Not only are they primary reservoirs for artifacts they often encase entire sites And soil forming processes in themselves are an important component of site formation influencing which artifacts features and environmental indicators floral faunal and geological will be destroyed and to what extent and which will be preserved and how well In this book Holliday will address each of these issues in terms of fundamentals as well as in field case histories from all over the world The focus will be on principles of soil geomorphology soil stratigraphy and soil chemistry and their applications in archaeological research
