[With a Portrait.].** Albert Charles Seward, 1943 *Geology for Everyman* Albert Charles Seward (Sir), 1945 *The Restless Earth, Geology for Everyman* Robert Gheyselinck, 1941 **The Restless Earth** Robert Gheyselinck, 1939 **"The" Major Achievements of Science** Arthur Edward Ellard McKenzie, 1960 *Geophysical Abstracts 125, April-June 1946*, 1946 *My Dear Bessie* Chris Barker, Bessie Moore, 2015-02-05 AS HEARD ON RADIO 4 Utterly wonderful NINA STIBBE author of *Love Nina* Twenty hours have gone since I last wrote I have been thinking of you I shall think of you until I post this and until you get it Can you feel as you read these words that I am thinking of you now aglow alive alert at the thought that you are in the same world and by some strange chance loving me In September 1943 Chris Barker was serving as a signalman in North Africa when he decided to brighten the long days of war by writing to old friends One of these was Bessie Moore a former work colleague The unexpected warmth of Bessie's reply changed their lives forever Crossing continents and years their funny affectionate and intensely personal letters are a remarkable portrait of a love played out against the backdrop of the Second World War Above all their story is a stirring example of the power of letters to transform ordinary lives **Information Circular**, 1946

Drifting Continents and Shifting Theories Homer Eugene LeGrand, 1988-12-15 A historical account of the triumph of the global theory of plate tectonics and its implications for the modern revolution in geology of the 1960s and 1970s after fifty years of controversy and competition **Understanding Building Stones and Stone Buildings** John Hudson, John Cosgrove, 2019-04-24 This book covers the wide spectrum of subjects relating to obtaining and using building stones starting with their geological origin and then describing the nature of granites volcanics limestones sandstones flint metamorphic stones breccias and conglomerates with emphasis being placed on how to recognise the different stones via the many illustrated examples from Great Britain and other countries The life of a building stone is explained from its origin in the quarry through its exposure to the elements when used for a building to its eventual deterioration The structure of stone buildings is then discussed with explanations of the mechanics of pillars lighthouses and walls arches bridges buttresses and roof vaults plus castles and cathedrals The sequence of the historical architectural styles of stone buildings is explained from the early days through to postmodern buildings Special attention is paid to two famous architects the Roman Vitruvius and the English Sir Christopher Wren who designed and supervised the construction of St Paul's Cathedral in London To demonstrate many of the concepts presented two exemplary stone buildings are described in detail the Albert Memorial in London and Durham Cathedral in northern England The former building is interesting because it is comprised of a cornucopia of different building stones and the latter building because of its architecture and sandstone decay mechanisms In the final Chapter ruined stone buildings are discussed the many reasons for their decay and the possibility of their rebirth via digital recording of their geometry The book has over 350 pages and is illustrated with more than 450 diagrams and

colour photographs of both the various stones and the associated stone buildings Readers knowledge of the subject will be greatly enhanced by these images and the related explanatory text A wide ranging references and bibliography section is also included

Information Circular United States. Bureau of Mines,1947 **Adult Catalog: Subjects** Los Angeles County Public Library,1970 **Political Descent** Piers J. Hale,2014-08-05 Historians of science have long noted the influence of the nineteenth century political economist Thomas Robert Malthus on Charles Darwin In a bold move Piers J Hale contends that this focus on Malthus and his effect on Darwin s evolutionary thought neglects a strong anti Malthusian tradition in English intellectual life one that not only predated the 1859 publication of the Origin of Species but also persisted throughout the Victorian period until World War I Political Descent reveals that two evolutionary and political traditions developed in England in the wake of the 1832 Reform Act one Malthusian the other decidedly anti Malthusian and owing much to the ideas of the French naturalist Jean Baptiste Lamarck These two traditions Hale shows developed in a context of mutual hostility debate and refutation Participants disagreed not only about evolutionary processes but also on broader questions regarding the kind of creature our evolution had made us and in what kind of society we ought therefore to live Significantly and in spite of Darwin s acknowledgement that natural selection was the doctrine of Malthus applied to the whole animal and vegetable kingdoms both sides of the debate claimed to be the more correctly Darwinian By exploring the full spectrum of scientific and political issues at stake Political Descent offers a novel approach to the relationship between evolution and political thought in the Victorian and Edwardian eras
