Evaluating Teaching in Science, Technology, Engineering, and Mathematics: Principles and Research Findings

Every department, college, and university is unique, and thus no one model for evaluating teaching effectiveness that is based on learning outcomes will be appropriate for all institutions. Nonetheless, if effective methodologies for evaluating teaching and student learning are to be implemented, administrators and senior faculty must become more aware of emerging research on effective practices. Knowledge of this work is particularly important at the departmental level, where the evaluation of individual faculty members counts most. This chapter reviews what is known about how research findings can shape best practices in evaluating undergraduate teaching in science, technology, engineering, and mathematics (STEM). Chapter 5 builds on this research to highlight ways in which expectations and guidelines for evaluating teaching can be made clear to both faculty and administrators.

GENERAL PRINCIPLES AND OVERALL FINDINGS

The research literature suggests that for purposes of any formative or summative evaluation,¹ assessment that is based on a single teaching activity (e.g., classroom presentation) or depends on information from a single source (e.g., student evaluation forms) is less reliable, useful, and valid than an assessment of an instructor's strengths and weaknesses that is based on multiple sources (Centra, 1993). Comprehensive assessments of teaching are

¹Informal assessments of a faculty member's work that are used primarily to provide feedback and reinforcement to a colleague for purposes of ongoing professional development and improvement are characterized as *formative evaluations*. In contrast, evaluations that are used for purposes of rendering formal personnel decisions and that are based on a variety of data are often called *summative evaluations* (Scriven, 1990; review by Licata and Moreale, 1997).
