Evaluating Science And Scientists:

Evaluating Science and Scientists Mark S. Frankel,Jane Cave,1997 Reforms in the evaluation and funding of scientific research are a key element in the broader process of economic reform in Eastern Europe This text examines the introduction of competitive funding systems based on peer review surveys Western experience in the design and management of evaluation systems and offers suggestions for dealing with some of the problems encountered by East European reformers This text is aimed at postgraduate and upper level undergraduate courses on science policy the sociology of science and science and society   *Science Evaluation and Its Management* Václav Pačes,Ladislav Pivec,Albert H. Teich,1999 Evaluation of scientific research particularly of research which is supported by government funds is a matter of growing concern in virtually every nation It is no longer adequate to expect that the value of investments in research will be judged in long term historical perspective Resources are scarce and policy makers are looking for ways to assure that these resources are used in the most effective way From the life or death evaluations of academic research institutes in the post communist countries to the Government Performance and Results Act GPRA in the United States research evaluation has become a topic of utmost importance in science policy Evaluation often has substantial consequences for researchers and research institutions including restructuring shifting of priorities budget reductions or evenclosures Therefore it is essential that evaluation is done systematically and objectively with methodologies that can be understood and trusted by those concerned This book is based on a NATO Advanced Research Workshop co organized by the Academy of Sciences of the Czech Republic and the American Association for the Advancement of Science It describes a range of the most up to date methods of science evaluation and the experience with their implementation in many countries This book can be of interest to researchers policy makers practitioners of science evaluation and many others interested in science policy   **The Evaluation Game** Emanuel Kulczycki,2023-04-27 This text examines the origin and effects of publication metrics that are used to measure academic productivity around the world   The Evaluation Handbook Debra J. Rog,Leonard Bickman,2025-03-26 This pragmatic evaluator s companion from leaders in the field provides essential guidance for designing implementing and managing exemplary evaluations using established and emerging methods designs and analyses With contributions from skilled experts the Handbook has a unique focus on the competencies identified by the American Evaluation Association as critical for evaluators Balancing rigor with practical mentor style guidance chapters build the reader s skills for tailoring studies creatively to address specific evaluation situations and contexts optimizing communication and collaborative decision making and centering equity and justice This insider s guide is replete with detailed examples real world scenarios and other helpful features including chapter overviews and an end of book glossary   *British Science Evaluation Methods* United States. Congress. House. Committee on Science and Technology. Task Force on Science Policy,1986   Blue Marble Evaluation Michael Quinn Patton,2019-11 Global thinking principle Anthropocene as context principle Transformation engagement

Catalano,Michael A. Marino,2020-05-06 Measurements in Evaluating Science Education is a comprehensive intuitive guide to many of the key instruments created to assess science education environments learning and instruction Nearly 70 different surveys tests scales and other metrics are organized according to the qualities the measures attempt to gauge such as attitudes toward science beliefs and misconceptions self efficacy and content knowledge Summaries of each instrument usage information developmental history and validation and reported psychometric properties make this an essential reference for anyone interested in understanding science education assessment How Science Works Stephen H. Jenkins,2004 One week red wine is good for the heart The next week new reports say it s bad for the health So which is true Anyone who s ever read science news with fascination or who s ever been confounded by conflicting stories will appreciate this book Taking a look at some true to life contemporary news stories the author assesses recent studies on topics ranging from vitamin C and caffeine to pollution and cancer With straight talk and a passion for the whole project of science he demysifies the cult of the expert and sheds light on the nitty gritty details of scientific processes Any scientist loves a challenge but the biggest challenge of all observes Jenkins is shared by scientists and nonscientitsts alike how to make practical decisions in light of ambiguous evidence Promising no simple answers this book does offer excellent food for thought for people pondering that next glass of wine **Evaluation Des Politiques Scientifiques Et Technologiques** Jon Alexander,1990 **National Science Policy Study, Parts I-VII** United States. Congress. House. Committee on Science,1998 **The Oxford Handbook of the Science of Science Communication** Kathleen Hall Jamieson,Dan Kahan,Dietram A. Scheufele,2017-05-17 The proposal to vaccinate adolescent girls against the human papilloma virus ignited political controversy as did the advent of fracking and a host of other emerging technologies These disputes attest to the persistent gap between expert and public perceptions Complicating the communication of sound science and the debates that surround the societal applications of that science is a changing media environment in which misinformation can elicit belief without corrective context and likeminded individuals are prone to seek ideologically comforting information within their own self constructed media enclaves Drawing on the expertise of leading science communication scholars from six countries The Oxford Handbook of the Science of Science Communication not only charts the media landscape from news and entertainment to blogs and films but also examines the powers and perils of human biases from the disposition to seek confirming evidence to the inclination to overweight endpoints in a trend line In the process it draws together the best available social science on ways to communicate science while also minimizing the pernicious effects of human bias The

Handbook adds case studies exploring instances in which communication undercut or facilitated the access to scientific evidence The range of topics addressed is wide from genetically engineered organisms and nanotechnology to vaccination controversies and climate change Also unique to this book is a focus on the complexities of involving the public in decision making about the uses of science the regulations that should govern its application and the ethical boundaries within which science should operate The Handbook is an invaluable resource for researchers in the communication fields particularly in science and health communication as well as to scholars involved in research on scientific topics susceptible to distortion in partisan debate   **Making Science** Stephen Cole,1992 The sociology of science is dominated today by relativists who boldly argue that the content of science is not influenced by evidence from the empirical world but is instead socially constructed in the laboratory Making Science is the first serious critique by a sociologist of the social constructivist position Stephen Cole begins by making a distinction between two kinds of knowledge the core which consists of those contributions that have passed the test of evaluation and are universally accepted as true and important and the research frontier which is composed of all work in progress that is still under evaluation Of the thousands of scientific contributions made each year only a handful end up in the core What distinguishes those that are successful Agreeing with the constructivists Cole argues that there exists no set of rules that enables scientists to certify the validity of frontier knowledge This knowledge is underdetermined by the evidence and therefore social factors such as professional characteristics and intellectual authority can and do play a crucial role in its evaluation But Cole parts company with the constructivists when he asserts that it is impossible to understand which frontier knowledge wins a place in the core without first considering the cognitive characteristics of the contributions He concludes that although the focus of scientific research the rate of advance and indeed the everyday making of science are influenced by social variables and processes the content of the core of science is constrained by nature In Making Science Cole shows how social variables and cognitive variables interact in the evaluation of frontier knowledge   **Feed evaluation science** Paul J. Moughan,Wouter H. Hendriks,2025-07-21 Written by a team of international authorities Feed Evaluation Science is a must have for students researchers postdoctoral fellows and teachers of animal nutrition as well as practitioners in the feed industry The text offers a classical treatment of the basic principles and new developments in feed evaluation for simple stomached animals with emphasis on pigs and poultry The chapters follow a logical progression to provide a coherent in depth coverage of the key science and technology inherent in the nutrition and feeding of animals The topics covered are nutrient analysis and characterisation nutrient bioavailability post absorptive nutrient utilisation the principles of animal growth and the mathematical modelling of growth Practical aspects of feed processing anti nutritional factors the use of markers in nutrition studies predicting bioavailable nutrients and the principles of feed formulation are highlighted in the context of pig poultry and companion animal nutrition This is a classic text on the nutrition of simple stomached animals and is intended for those working at the forefront of developments in feed
