This report describes a HITEC evaluation designed to determine the basic capabilities and limitations of the INTER LOK System for use as a technically viable precast mechanically stabilized earth retaining wall system. The evaluation was conducted based on design construction performance and quality assurance information outlined in the HITEC Protocol. The INTER LOK System features a cross shaped segmental precast concrete facing panel connected to metallic rebar and anchor plate type of soil reinforcement attached to the facing panels by a keyplate that interlocks with the facing panels.

Environmental Technology Verification Report for the Plasma Enhanced Melter, 2003-01-01 Prepared by the Environmental Technology Evaluation Center EvTEC a service center of CERF IIEC. This Technology Verification report describes the nature and scope of the environmental evaluation of the performance of the Plasma Enhanced Melter PEM system for waste treatment. The evaluation was conducted through a cooperative program established in 1998 between the Washington State Department of Ecology, Integrated Environmental Technology Inc, Allied Technology Group and the Civil Engineering Research Foundation. The goal of this report is to provide potential users and purchasers of the PEM system with information they need to make more informed decisions regarding the performance of PEM as an equivalent or alternative to incineration for treating hazardous waste.

Hydro-Environmental Analysis James L. Martin, 2013-12-04 Focusing on fundamental principles Hydro Environmental Analysis Freshwater Environments presents in depth information about freshwater environments and how they are influenced by regulation. It provides a holistic approach exploring the factors that impact water quality and quantity and the regulations policy and management methods that are necessary to maintain this vital resource. It offers a historical viewpoint as well as an overview and foundation of the physical chemical and biological characteristics affecting the management of freshwater environments. The book concentrates on broad and general concepts providing an interdisciplinary foundation. The author covers the methods of measurement and classification chemical physical and biological characteristics indicators of ecological health and management and restoration. He also considers common indicators of environmental health characteristics and operations of regulatory control structures applicable laws and regulations and restoration methods. The text delves into rivers and streams in the first half and lakes and reservoirs in the second half. Each section centers on the characteristics of those systems and methods of classification and then moves on to discuss the physical chemical and biological characteristics of each. In the section on lakes and reservoirs it examines the characteristics and operations of regulatory structures and presents the methods commonly used to assess the environmental health or integrity of these water bodies. It also introduces considerations for restoration and presents two unique aquatic environments wetlands and reservoir tailwaters. Written from an engineering perspective the book is an ideal introduction to the aquatic and limnological sciences for students of environmental science as well as students of environmental engineering.

It also serves as a reference for engineers and scientists involved in the management regulation or restoration of freshwater environments
