

Review of Research Articles

At the basic level, a critical analysis begins with questions like those set out by Taylor (2009):¹

What is the author's motivation in writing this work?

- Agreeing with, defending or confirming a particular point of view
- Proposing a new point of view
- Conceding to an existing point of view, but qualifying certain points
- Reformulating an existing idea for a better explanation
- Dismissing a point of view through an evaluation of its criteria
- Reconciling two seemingly different points of view

How does the author approach the subject matter? What kinds of words does he or she use?

- Observing and identifying objects for analysis
- Describing features
- Defining, referring, classifying, distinguishing, or comparing terms
- Illustrating or exemplifying a general point to explain or apply it
- Theorizing about or explaining why things are the way they are
- Conjecturing or speculating about explanations
- Evaluating the adequacy of our observations

What is the overall structure of the author's work? How do the separate parts fit together?

- Look at points in the article that feature repetition or summary. These are moments when authors often focus on their larger argument or thesis.

In fact, the process of critical evaluation lies at the heart of what we might call knowledge creation. When researchers submit research papers to peer-reviewed journals in their fields, their papers are reviewed anonymously by other researchers, who critically assess each study in terms of:

- The study's contribution to knowledge, theory, or practice in a field
- The study's research design and methodology
- The study's findings, in particular, how they are presented and interpreted
- The researcher's conclusions
- The writing quality, clarity, and style, and the organization of the information presented

If you are asked to write a critique of a research article, you should focus on these issues. You will also need to consider where and when the article was published and who wrote it. This handout presents guidelines for writing a research critique and questions to consider in writing a critique.

Evaluating Research Articles From Start to Finish Ellen R. Girden, Robert Kabacoff, 2011 Using examples of good as well as flawed research studies this text explains how to decide whether the conclusions reported in an article are justified on the basis of the design and analysis of the experiment *Evaluating Research Articles from Start to Finish* Ellen R. Girden, 2001-04-19 Describes how to critique various types of study including case studies surveys correlation studies regression analysis studies factor analytic studies discriminant analysis studies factorial studies and quasi experimental studies *Evaluating Research Articles from Start to Finish* Ellen R. Girden, 1996-08-06 How does one tell if the appropriate design or analysis was used in a research article Using examples of both good and flawed studies Ellen R Girden shows how to read qualitative and quantitative research articles critically from start to finish She explains how to decide whether the conclusions reported in an article are justified based on the design and analysis of the experiment By first demonstrating how to analyze an article in each design category for example correlational study factor analysis and narrative analysis Girden uses targeted questions to assist the reader's critique of each major section of an article *Handbook of Research Design and Social Measurement* Delbert C. Miller, Neil J. Salkind, 2002-01-16 If a student researcher had only one handbook on their bookshelf Miller and Salkind's Handbook would certainly have to be it With the updated material the addition of the section on ethical issues which is so well done that I'm recommending it to the departmental representative to the university IRB and a new Part 4 on Qualitative Methods the new Handbook is an indispensable resource for researchers Dan Cover Department of Sociology Furman University I have observed that most instructors want to teach methodology their way to imbue the course with their own approach Miller Salkind allows one to do this easily The book is both conceptually strong e.g. very good coverage of epistemology research design and statistics and at the same time provides a wealth of practical knowledge scales indices professional organizations computer applications etc In addition it covers the waterfront of methodology Michael L Vasu Director of Information Technology North Carolina State University A unique and excellent reference tool for all social science researchers and a good textbook for graduate students and senior year undergraduate classes These students are about to enter the real life of research and need a handy and comprehensive tool as a starting point that offers shortcuts for getting into real research projects For a small project the book offers enough information to get the project started For big projects the book is ideal for information on where to look for things and examples Jianhong Liu Department of Sociology Rhode Island College The book considered a necessity by many social science researchers and their students has been revised and updated while retaining the features that made it so useful The emphasis in this new edition is on the tools graduate students and more advanced researchers need to conduct high quality research Features Benefits Provides step by step instruction for students research training by beginning with how to find a creative idea a middle range theory and initial hypothesis and proceeds through design proposal collection and analysis of data followed by writing reporting and
