Genetic Programming Theory And Practice II:

Genetic Programming Theory and Practice II Una-May O'Reilly, Tina Yu, Rick Riolo, Bill Worzel, 2004-10-26 The work described in this book was first presented at the Second Workshop on Genetic Programming Theory and Practice organized by the Center for the Study of Complex Systems at the University of Michigan Ann Arbor 13-15 May 2004. The goal of this workshop series is to promote the exchange of research results and ideas between those who focus on Genetic Programming GP theory and those who focus on the application of GP to various real world problems. In order to facilitate these interactions the number of talks and participants was small and the time for discussion was large. Further participants were asked to review each other's chapters before the workshop. Those reviewer comments as well as discussion at the workshop are reflected in the chapters presented in this book. Additional information about the workshop addendums to chapters and a site for continuing discussions by participants and by others can be found at <http://cscs.umich.edu/8000/GPTP/2004/>. We thank all the workshop participants for making the workshop an exciting and productive three days. In particular we thank all the authors without whose hard work and creative talents neither the workshop nor the book would be possible. We also thank our keynote speakers Lawrence Davis of NuTech Solutions Inc, Jordan Pollack of Brandeis University and Richard Lenski of Michigan State University who delivered three thought provoking speeches that inspired a great deal of discussion among the participants.

Multi-Objective Optimization in Theory and Practice II: Metaheuristic Algorithms André A. Keller, 2019-03-28 Multi Objective Optimization in Theory and Practice is a simplified two part approach to multi objective optimization MOO problems. This second part focuses on the use of metaheuristic algorithms in more

challenging practical cases The book includes ten chapters that cover several advanced MOO techniques These include the determination of Pareto optimal sets of solutions metaheuristic algorithms genetic search algorithms and evolution strategies decomposition algorithms hybridization of different metaheuristics and many objective more than three objectives optimization and parallel computation The final section of the book presents information about the design and types of fifty test problems for which the Pareto optimal front is approximated For each of them the package NSGA II is used to approximate the Pareto optimal front It is an essential handbook for students and teachers involved in advanced optimization courses in engineering information science and mathematics degree programs

Massively Parallel Evolutionary Computation on GPGPUs Shigeyoshi Tsutsui, Pierre Collet, 2013-12-05 Evolutionary algorithms EAs are metaheuristics that learn from natural collective behavior and are applied to solve optimization problems in domains such as scheduling engineering bioinformatics and finance Such applications demand acceptable solutions with high speed execution using finite computational resources Therefore there have been many attempts to develop platforms for running parallel EAs using multicore machines massively parallel cluster machines or grid computing environments Recent advances in general purpose computing on graphics processing units GPGPU have opened up this possibility for parallel EAs and this is the first book dedicated to this exciting development The three chapters of Part I are tutorials representing a comprehensive introduction to the approach explaining the characteristics of the hardware used and presenting a representative project to develop a platform for automatic parallelization of evolutionary computing EC on GPGPUs The 10 chapters in Part II focus on how to consider key EC approaches in the light of this advanced computational technique in particular addressing generic local search tabu search genetic algorithms differential evolution swarm optimization ant colony optimization systolic genetic search genetic programming and multiobjective optimization The 6 chapters in Part III present successful results from real world problems in data mining bioinformatics drug discovery crystallography artificial chemistries and sudoku Although the parallelism of EAs is suited to the single instruction multiple data SIMD based GPU there are many issues to be resolved in design and implementation and a key feature of the contributions is the practical engineering advice offered This book will be of value to researchers practitioners and graduate students in the areas of evolutionary computation and scientific computing
