International Journal of Systematic and Evolutionary Microbiology, 2009 [The Genetics of Political Behavior](#) Michael Ryan, 2020-11-29 In this unique amalgam of neuroscience genetics and evolutionary psychology Ryan argues that leftists and rightists are biologically distinct versions of the human species that came into being at different moments in human evolution The book argues that the varying requirements of survival at different points in history explain why leftists and rightists have anatomically different brains as well as radically distinct behavioral traits Rightist traits such as callousness and fearfulness emerged early in evolution when

violence was pervasive in human life and survival depended on the fearful anticipation of danger Leftist traits such as pro sociality and empathy emerged later as environmental adversity made it necessary for humans to live in larger social groups that required new adaptive behavior The book also explores new evolutionary theories that emphasize the role of the environment in shaping not only human political behavior but also humans genetic architecture With implications for the future of politics the book explores how the niche worlds we build for ourselves through political action can have consequences for the evolution of the species Proposing a new way of understanding human politics this is fascinating reading for students and academics in psychology the social sciences and humanities as well as general readers interested in political behavior

Plant Tolerance to Environmental Stress Mirza Hasanuzzaman, Masayuki Fujita, Hirosuke Oku, M. Tofazzal

Islam,2019-01-10 Global climate change affects crop production through altered weather patterns and increased environmental stresses Such stresses include soil salinity drought flooding metal metalloid toxicity pollution and extreme temperatures The variability of these environmental conditions pared with the sessile lifestyle of plants contribute to high exposure to these stress factors Increasing tolerance of crop plants to abiotic stresses is needed to fulfill increased food needs of the population This book focuses on methods of improving plants tolerance to abiotic stresses It provides information on how protective agents including exogenous phytoprotectants can mitigate abiotic stressors affecting plants The application of various phytoprotectants has become one of the most effective approaches in enhancing the tolerance of plants to these stresses Phytoprotectants are discussed in detail including information on osmoprotectants antioxidants phytohormones nitric oxide polyamines amino acids and nutrient elements of plants Providing a valuable resource of information on phytoprotectants this book is useful in diverse areas of life sciences including agronomy plant physiology cell biology environmental sciences and biotechnology *Plant Speed Breeding and High-throughput Technologies* Jen-Tsung Chen,2024-08-26 The research field of plant speed breeding is promising to meet the future demand for crop improvement in an efficient and effective manner The process accelerates breeding and research programs through the shortening of the generation time of crops Plant Speed Breeding and High Throughput Technologies explores and analyzes a range of innovations from CRISPR Cas9 based genome editing to state of the art controlled environment growth chambers The book integrates achievements of plant speed breeding technologies with an emphasis on the fundamental and advanced systems for genome editing functional genomics controlled environment growth chambers genomic and phenotypic selection methods and high throughput technologies It examines the applications of technologies across major model plants and key crops such as cereals vegetables and fruit trees The book explores high throughput genotyping using next generation sequencing systems enabling precise single nucleotide polymorphism markers quantitative trait loci mapping and genome wide association studies These tools are used in identifying candidate genes that will revolutionize crop breeding as they are capable of tolerating complex abiotic and biotic stresses induced by global climate change Serving as an ideal reference on plant speed breeding technologies this book is for graduate students teachers researchers and experts in the fields of plant sciences and plant breeding as well as agronomy and agriculture *Journal of the National Cancer Institute* ,2010

Human Enhancement Technologies and Healthcare Policy Jacek Klich,2024-08-01 Human enhancement HE is considered one of the most profoundly impactful effects of the Fourth Industrial Revolution This book presents the definition theory scope and main challenges of HE from a health policy and healthcare systems perspective It offers a comprehensive view of the consequences of human enhancement disrupting the status quo in health service delivery and social coherence The book examines the latest achievements of HE focusing on four forms of enhancement cognitive physical mood and moral These forms are supported by the list of specific technologies and techniques used for HE The book identifies the current

trends in HE's development and analyses the challenges that HE poses to health policy and healthcare systems. It discusses the legal and financial aspects of HE including regulation and shows that the financing of HE goes far beyond the scope of universal health coverage thus opening the door for private voluntary insurance and out of pocket payments. This in turn leads towards growing inequalities which may threaten social cohesion. Readers will receive a structured picture of the latest advances in HE and trends in the field as well as a list of the challenges and problems that HE generates. The book offers a concise picture of HE for students and researchers across the political sciences, public health, public sector management and sociology. It will also find an audience among healthcare managers, policymakers and those who are interested in social change.

Handbook of Cognitive Archaeology Tracy B. Henley, Matt J. Rossano, Edward P. Kardas, 2019-07-24. The remains that archaeologists uncover reveal ancient minds at work as much as ancient hands and for decades many have sought a better way of understanding those minds. This understanding is at the forefront of cognitive archaeology, a discipline that believes that a greater application of psychological theory to archaeology will further our understanding of the evolution of the human mind. Bringing together a diverse range of experts including archaeologists, psychologists, anthropologists, biologists, psychiatrists, neuroscientists, historians and philosophers in one comprehensive volume, this accessible and illuminating book is an important resource for students and researchers exploring how the application of cognitive archaeology can significantly and meaningfully deepen their knowledge of early and ancient humans. This seminal volume opens the field of cognitive archaeology to scholars across the behavioral sciences.

Tabula Rasa Duana Fullwiley, 2024-04-23. Duana Fullwiley has penned an intimate chronicle of laboratory life in the genomic age. She presents many of the influential scientists at the forefront of genetics who have redefined how we practice medicine and law and understand ancestry in an era of big data and waning privacy. Exceedingly relatable and human, the scientists in these pages often struggle for visibility, teeter on the tightrope of inclusion and work tirelessly to imprint the future. As they actively imagine a more equal and just world, they often find themselves ensnared in reproducing timeworn conceits of race and racism that can seed the same health disparities they hope to resolve. Nothing dynamic can live for long as a blank slate, an innocent tabula rasa. But how the blank slate of the once raceless human genome became one of racial differences in various forms of what Fullwiley calls the tabula rasa has a very specific and familiar history, one that has cycled through the ages in unexpected ways.

Drawing the Map of Life Victor K. McElheny, 2010-10-19. Drawing the Map of Life is the dramatic story of the Human Genome Project from its origins through the race to order the 3 billion subunits of DNA to the surprises emerging as scientists seek to exploit the molecule of heredity. It's the first account to deal in depth with the intellectual roots of the project, the motivations that drove it and the hype that often masked genuine triumphs. Distinguished science journalist Victor McElheny offers vivid, insightful profiles of key people such as David Botstein, Eric Lander, Francis Collins, James Watson, Michael Hunkapiller and Craig Venter. McElheny also shows that the Human Genome Project is a striking example of

how new techniques such as restriction enzymes and sequencing methods often arrive first shaping the questions scientists then ask Drawing on years of original interviews and reporting in the inner circles of biological science Drawing the Map of Life is the definitive up to date story of today s greatest scientific quest No one who wishes to understand genome mapping and how it is transforming our lives can afford to miss this book *Library Journal* ,2002 **Encyclopedia of**
