Francken,2014-04-21 This book forms the Proceedings of the Second International RILEM Conference held in Liege in March 1993 It follows the successful first conference held in 1989 and focusses on two main topics the current state of the art of reflective cracking in highway and other pavements and design recommendations for field applications As well as more than *Geotechnical Practice for Waste Disposal* D.E. Daniel,2012-12-06 Earth scientists and geotechnical engineers are increasingly challenged to solve environmental problems related to waste disposal facilities and cleanup of contaminated sites The effort has given rise to a new discipline of specialists in the field of environmental geotechnology To be effective environmental geotechnologists must not only be armed with the traditional knowledge of fields such as geology and civil engineering but also be knowledgeable of principles of hydrogeology chemistry and biological processes In addition the environmental geotechnologist must be completely up to date on the often complex cadre of local and national regulations must comprehend the often complex legal issues and

sometimes mind boggling financial implications of a project and must be able to communicate effectively with a host of other technical specialists regulatory officials attorneys local land owners journalists and others The field of environmental geotechnology will no doubt continue to offer unique challenges The purpose of this book is to summarize the current state of practice in the field of environmental geotechnology Part One covers broadly applicable principles such as hydrogeology geochemistry and contaminant transport in soil and rock Part Two describes in detail the underlying principles for design and construction of new waste disposal facilities Part Three covers techniques for site remediation Finally Part Four addresses the methodologies for monitoring The topics of waste disposal and site remediation are extraordinarily broad
