Geometric Aspects Of Functional Analysis Israel Seminar 1986 87:
    Geometric Aspects of Functional Analysis ,1988   Geometric Aspects of Functional Analysis Joram Lindenstrauss,Vitali D. Milman,2006-11-14 This is the third published volume of the proceedings of the Israel Seminar on Geometric Aspects of Functional Analysis The large majority of the papers in this volume are original research papers There was last year a strong emphasis on classical finite dimensional convexity theory and its connection with Banach space theory In recent years it has become evident that the notions and results of the local theory of Banach spaces are useful in solving classical questions in convexity theory The present volume contributes to clarifying this point In addition this volume contains basic contributions to ergodic theory invariant subspace theory and qualitative differential geometry   Geometric Aspects of Functional Analysis Vitali D. Milman,Gideon Schechtman,2004-08-30 The Israeli GAFA seminar on Geometric Aspect of Functional Analysis during the years 2002 2003 follows the long tradition of the previous volumes It reflects the general trends of the theory Most of the papers deal with different aspects of the Asymptotic Geometric Analysis In addition the volume contains papers on related aspects of Probability classical Convexity and also Partial Differential Equations and Banach Algebras There are also two expository papers on topics which proved to be very much related to the main topic of the seminar One is Statistical Learning Theory and the other is Models of Statistical Physics All the papers of this collection are original research papers   Geometric Aspects of Functional Analysis Joram Lindenstrauss,1988   **Geometric Aspects of Functional Analysis** Joram Lindenstrauss,Vitali D. Milman,2006-11-14 The scope of the Israel seminar in geometric aspects of functional analysis during the academic year 89 90 was particularly wide covering topics as diverse as Dynamical systems Quantum chaos Convex sets in Rn Harmonic analysis and Banach space theory The large majority of the papers are original research papers   **Geometric Aspects of Functional Analysis** Bo'az Klartag,Emanuel Milman,2014-10-08 As in the previous Seminar Notes the current volume reflects general trends in the study of Geometric Aspects of Functional Analysis Most of the papers deal with different aspects of Asymptotic Geometric Analysis understood in a broad sense many continue the study of geometric and volumetric properties of convex bodies and log concave measures in high dimensions and in particular the mean norm mean width metric entropy spectral gap thin shell and slicing parameters with applications to Dvoretzky and Central Limit type results The study of spectral properties of various systems matrices operators and potentials is another central theme in this volume As expected probabilistic tools play a significant role and probabilistic questions regarding Gaussian noise stability the Gaussian Free Field and First Passage Percolation are also addressed The historical connection to the field of Classical Convexity is also well represented with new properties and applications of mixed volumes The interplay between the real convex and complex pluri subharmonic settings continues to manifest itself in several additional articles All contributions are original research papers and were subject to the usual refereeing standards   Geometric Aspects of Functional Analysis V.D. Milman,G. Schechtman,2007-05-09 This volume of

original research papers from the Israeli GAFA seminar during the years 1996 2000 not only reports on more traditional directions of Geometric Functional Analysis but also reflects on some of the recent new trends in Banach Space Theory and related topics These include the tighter connection with convexity and the resulting added emphasis on convex bodies that are not necessarily centrally symmetric and the treatment of bodies which have only very weak convex like structure Another topic represented here is the use of new probabilistic tools in particular transportation of measure methods and new inequalities emerging from Poincar like inequalities   Geometric Aspects of Functional Analysis Joram Lindenstrauss,Vitali Milman,2012-12-06 This is the sixth published volume of the Israel Seminar on Geometric Aspects of Functional Analysis The previous volumes are 1983 84 published privately by Tel Aviv University 1985 86 Springer Lecture Notes Vol 1267 1986 87 Springer Lecture Notes Vol 1317 1987 88 Springer Lecture Notes Vol 1376 1989 90 Springer Lecture Notes Vol 1469 As in the previous vC lumes the central subject of this volume is Banach space theory in its various aspects In view of the spectacular development in infinite dimensional Banach space theory in recent years like the solution of the hyperplane problem the unconditional basic sequence problem and the distortion problem in Hilbert space it is quite natural that the present volume contains substantially more contributions in this direction than the previous volumes This volume also contains many important contributions in the traditional directions of this seminar such as probabilistic methods in functional analysis non linear theory harmonic analysis and especially the local theory of Banach spaces and its connection to classical convexity theory in IRn The papers in this volume are original research papers and include an invited survey by Alexander Olevskii of Kolmogorov s work on Fourier analysis which was presented at a special meeting on the occasion of the 90th birthday of A N Kol mogorov We are very grateful to Mrs M Hercberg for her generous help in many directions which made the publication of this volume possible Joram Lindenstrauss Vitali Milman 1992 1994 Operator Theory Advances and Applications Vol   **Geometric Aspects of Functional Analysis** ,2003   *Geometric Aspects of Functional Analysis* Ronen Eldan,Bo'az Klartag,Alexander Litvak,Emanuel Milman,2023-09-29 This book reflects general trends in the study of geometric aspects of functional analysis understood in a broad sense A classical theme in the local theory of Banach spaces is the study of probability measures in high dimension and the concentration of measure phenomenon Here this phenomenon is approached from different angles including through analysis on the Hamming cube and via quantitative estimates in the Central Limit Theorem under thin shell and related assumptions Classical convexity theory plays a central role in this volume as well as the study of geometric inequalities These inequalities which are somewhat in spirit of the Brunn Minkowski inequality in turn shed light on convexity and on the geometry of Euclidean space Probability measures with convexity or curvature properties such as log concave distributions occupy an equally central role and arise in the study of Gaussian measures and non trivial properties of the heat flow in Euclidean spaces Also discussed are interactions of this circle of ideas with linear programming and sampling algorithms including the solution of a question in online learning algorithms using a

classical convexity construction from the 19th century   *Geometric Aspects of Functional Analysis* Joram Lindenstrauss,Vitali D. Milman,1988-05-25 This is the third published volume of the proceedings of the Israel Seminar on Geometric Aspects of Functional Analysis The large majority of the papers in this volume are original research papers There was last year a strong emphasis on classical finite dimensional convexity theory and its connection with Banach space theory In recent years it has become evident that the notions and results of the local theory of Banach spaces are useful in solving classical questions in convexity theory The present volume contributes to clarifying this point In addition this volume contains basic contributions to ergodic theory invariant subspace theory and qualitative differential geometry   Probability in Banach Spaces 6 Haagerup,2012-12-06 This volume contains a selection of papers by the participants of the 6 International Conference on Probability in Banach Spaces Sand bjerg Denmark June 16 D1 1986 The conference was attended by 45 participants from several countries One thing makes this conference completely different from the previous five ones namely that it was ar ranged jointly in Probability in Banach spaces and Banach space theory with almost equal representation of scientists in the two fields Though these fields are closely related it seems that direct collaboration between researchers in the two groups has been seldom It is our feeling that the conference where the participants were together for five days taking part in lectures and intense discussions of mutual problems has contributed to a better understanding and closer collaboration in the two fields The papers in the present volume do not cover all the material pre sented in the lectures several results covered have been published else where The sponsors of the conference are The Carlsberg Foundation The Danish Natural Science Research Council The Danish Department of Education The Department of Mathematics Odense University The Department of Mathematics Aarhus University The Knudsen Foundation Odense Odense University The Research Foundation of Aarhus University The Thborg Foundation The participants and the organizers would like to thank these institu tions for their support The Organizers Contents A de Acosta and M Ledoux On the identification of the limits in the law of the iterated logarithm in Banach spaces   *Visions in Mathematics* Noga Alon,Jean Bourgain,Alain Connes,Misha Gromov,Vitali D. Milman,2011-03-31 Visions in Mathematics Towards 2000 was one of the most remarkable mathematical meetings in recent years It was held in Tel Aviv from August 25th to September 3rd 1999 and united some of the leading mathematicians worldwide The goals of the conference were to discuss the importance the methods the past and the future of mathematics as we enter the 21st century and to consider the connection between mathematics and related areas The aims of the conference are reflected in the present set of survey articles documenting the state of art and future prospects in many branches of mathematics of current interest This is the first part of a two volume set that will serve any research mathematician or advanced student as an overview and guideline through the multifaceted body of mathematical research in the present and near future   *Geometrical Aspects of Functional Analysis* Joram Lindenstrauss,Vitali D. Milman,1987 The scope of the Israel seminar in geometric aspects of functional analysis during the academic year 89 90 was

particularly wide covering topics as diverse as Dynamical systems Quantum chaos Convex sets in Rn Harmonic analysis and Banach space theory The large majority of the papers are original research papers   *Probability in Banach Spaces* Michel Ledoux,Michel Talagrand,2013-03-09 Isoperimetric measure concentration and random process techniques appear at the basis of the modern understanding of Probability in Banach spaces Based on these tools the book presents a complete treatment of the main aspects of Probability in Banach spaces integrability and limit theorems for vector valued random variables boundedness and continuity of random processes and of some of their links to Geometry of Banach spaces via the type and cotype properties Its purpose is to present some of the main aspects of this theory from the foundations to the most important achievements The main features of the investigation are the systematic use of isoperimetry and concentration of measure and abstract random process techniques entropy and majorizing measures Examples of these probabilistic tools and ideas to classical Banach space theory are further developed   **The Concentration of Measure Phenomenon** Michel Ledoux,2001 The observation of the concentration of measure phenomenon is inspired by isoperimetric inequalities This book offers the basic techniques and examples of the concentration of measure phenomenon It presents concentration functions and inequalities isoperimetric and functional examples spectrum and topological applications and product measures   **International Books in Print** ,1997   Sampling Theory, a Renaissance Götz E. Pfander,2015-12-08 Reconstructing or approximating objects from seemingly incomplete information is a frequent challenge in mathematics science and engineering A multitude of tools designed to recover hidden information are based on Shannon s classical sampling theorem a central pillar of Sampling Theory The growing need to efficiently obtain precise and tailored digital representations of complex objects and phenomena requires the maturation of available tools in Sampling Theory as well as the development of complementary novel mathematical theories Today research themes such as Compressed Sensing and Frame Theory re energize the broad area of Sampling Theory This volume illustrates the renaissance that the area of Sampling Theory is currently experiencing It touches upon trendsetting areas such as Compressed Sensing Finite Frames Parametric Partial Differential Equations Quantization Finite Rate of Innovation System Theory as well as sampling in Geometry and Algebraic Topology   Geometric Nonlinear Functional Analysis Yoav Benyamini,Joram Lindenstrauss,2000 A systematic study of geometric nonlinear functional analysis The main theme is the study of uniformly continuous and Lipschitz functions between Banach spaces This study leads to the classification of Banach spaces and of their important subsets in the uniform and Lipschitz categories   **Handbook of Convex Geometry** Bozzano G Luisa,2014-06-28 Handbook of Convex Geometry Volume A offers a survey of convex geometry and its many ramifications and relations with other areas of mathematics including convexity geometric inequalities and convex sets The selection first offers information on the history of convexity characterizations of convex sets and mixed volumes Topics include elementary convexity equality in the Aleksandrov Fenchel inequality mixed surface area measures characteristic properties of convex sets in analysis and

differential geometry and extensions of the notion of a convex set The text then reviews the standard isoperimetric theorem and stability of geometric inequalities The manuscript takes a look at selected affine isoperimetric inequalities extremum problems for convex discs and polyhedra and rigidity Discussions focus on include infinitesimal and static rigidity related to surfaces isoperimetric problem for convex polyhedral bounds for the volume of a convex polyhedron curvature image inequality Busemann intersection inequality and its relatives and Petty projection inequality The book then tackles geometric algorithms convexity and discrete optimization mathematical programming and convex geometry and the combinatorial aspects of convex polytopes The selection is a valuable source of data for mathematicians and researchers interested in convex geometry
