Lenstra, 2012-12-06 This book gives an account of a number of recent developments in two different subfields of research optics and micro electronics The leading principle in presenting them together in one book is the striking similarity between a variety of notions in these two research areas We mention in this respect tunneling quantum

interference and localization which are important concepts in quantum mechanics and more specifically in condensed matter physics. Miniaturization in solid state engineering has led to new phenomena in which these concepts play their significant roles. As it is the wave character of electrons which is strongly emphasized in these phenomena, one's attention is quite naturally directed to the field of optics in which the above quantum mechanical notions all seem to have their direct classical wave mechanical counterparts. Both micro electronics and optics have been and still are in a mode of intensifying activity. The possibilities to technically translate devices developed within one research field to similar devices in the other field are strongly increasing. This opens among other things a door leading to quantum mechanics on a macroscopic scale with visible light under relatively easily accessible experimental conditions or to wave optics in the domain of solid state physics. Thinking in terms of analogies is important anyhow but it is especially the cross fertilization between optics and micro electronics which according to the editors will lead to deepened insights and a new type of technology.

Enayati Theorem of Absolute Orbital Supremacy: The Codex Belli Orbitalis Adib Enayati, The ultimate title from the father of modern space and electronic warfare. Enayati Theorem of Absolute Orbital Supremacy. The Codex Belli Orbitalis is not one book among many; it is the last. There is nothing like it in existence and there will be nothing after it. This is not a theory, a proposal or a policy suggestion. It is the doctrinal terminus of orbital warfare, an operational verdict written to end debate, overwrite legacy and collapse every competing doctrine under the weight of total strategic finality. Crafted by Dr Adib Enayati, the originator of the principles of spaceborne warfare, the architect of Orbital Suppression doctrine, the creator of the Convergent Algorithm, the revolutionary force behind modern electronic combat and the author of The Convergence Doctrine, the world's first and only unified framework for total multidomain supremacy, the Codex redefines orbit as a weaponized battlespace, no longer shared, no longer neutral and no longer open to interpretation. With precision engineered doctrine grounded in suppression logic, stealth integration, electronic dominance and kill web architectures and with original constructs like Orbital Chokepoint Theory and Phantom Vector Warfare among many others, the Codex does not theorize. It executes. Every principle within is mathematically aligned to the singular goal of achieving absolute and irreversible orbital supremacy. This is the true geometry of dominance. This work does not build on the outdated paradigms; this is a complete overwrite of the rules as you know them. This is a philosophical missile, a strategic cataclysm and an intellectual shockwave. It is what every institution would hallucinate in a fever dream of technostrategic transcendence. It is the loudest condemnation of the adversaries in their silent salivation in reverse engineering, a futile attempt to retrofit it within their decaying strategic mindset. The Codex does not escalate; it enforces preemption. The Codex closes the doctrinal loop because it was never intended to live within a doctrine. It was built to become the environment itself. This is why the Codex cannot be debated as one option among many. It is not an alternative view of orbital warfare; it is the frame in which all views must now be tested. Any doctrine that does not operate within Codex logic will remain incomplete. Any architecture that is not structured around Codex-enforced

suppression principles will remain penetrable Any adversary that does not assume the Codex is present will fall behind before the first exchange The codex is unapologetically designed for America and It is Free as the convergence doctrine was freely given Where all other doctrines hedge the Codex enforces Where others wait for consensus it delivers consequence It replaces outdated treaties invalidates shared access models and renders multilateral space frameworks strategically obsolete The codex has more than 90 original and brand new terms and concepts in order to rewrite the orbital warfare It introduces Phantom Vector Encirclement Volume Erasure Doctrine Sovereign ISR Saturation and dozens of additional constructs that together form the only fully integrated orbital combat architecture ever devised This is not a contribution to the field it is the field's closure There are no references no citations and no appeals The Codex stands alone because it was built from first principles not institutional permission It is a new operating system for orbital warfare and it does not ask for understanding it imposes alignment The field is now sealed What follows is not theory not interpretation not policy What follows is rule set by the father of modern space and electronic warfare

Comparative Essays in Early Greek and Chinese Rational Thinking Jean-Paul Reding, 2017-03-02 This collection of essays by Reding in the emergent field of Sino Hellenic studies explores the neglected inchoative strains of rational thought in ancient China and compares them to similar themes in ancient Greek thought right at the beginnings of philosophy in both cultures Reding develops and defends the bold hypothesis that Greek and Chinese rational thinking are one and the same phenomenon Rather than stressing the extreme differences between these two cultures as most other writings on these subjects Reding looks for the parameters that have to be restored to see the similarities Reding maintains that philosophy is like an unknown continent discovered simultaneously in both China and Greece but from different starting points The book comprises seven essays moving thematically from conceptual analysis logic and categories to epistemology and ontology with an incursion in the field of comparative metaphorology One of the book's main concerns is a systematic examination of the problem of linguistic relativism through many detailed examples
