Geometry Labs:

Geometry Labs Henri Picciotto, 1999 Geometry Labs is a book of hands on activities that use manipulatives to teach important ideas in geometry These 78 activities have enough depth to provide excellent opportunities for discussion and reflection in both middle school and high school classrooms

Short Geometry Labs Francis Gardella, Richard Delaware, 2022-05-01 Much of the content that students study in a high school geometry course is totally new to them The middle school mathematics curriculum does not contain preparatory work for many of these topics as it does in preparing students for the study of Algebra The proposed text would be a landmark book giving students the ability to gain some understanding of the content before it is formally addressed in the lesson in the course While many teachers use initial classroom activities called DoNows there are no structured materials available to teachers of Geometry for this purpose When teachers do use them these activities are constructed by the teachers The text provides the teachers with such materials and is structured to address what the teachers are about to present to the students The Labs can also be used for exploration of topics at the middle school level enhancing the program there and giving students a better preparation for their high school Geometry program

There Is No One Way to Teach Math Henri Picciotto, Robin Pemantle, 2024-09-10 A collaboration between a seasoned math teacher and a research mathematician this resource offers balanced instructional ideas based on student intellectual engagement and skilled teacher leadership It is solidly grounded in many areas of classroom practice but rather than serving as a prescriptive how to manual the authors invite reflection and discussion across classrooms and math departments much in the way you would share ideas in the teachers lounge or across the table at a conference Chapters offer practical suggestions and concrete examples to teachers of grades 6 12 on just about every aspect of the job manipulatives technology lesson planning group work classroom discussion and more In opposition to the idea of a one size fits all curriculum the authors explain how to integrate teaching techniques formal and informal student centered and teacher led experiential and rigorous Chapters also include vignettes as well as many links to curricular materials Ideal for math educators of grades 6 12 this book is both comprehensive in its strategies and sensitive to the complexities of teaching For these reasons math departments coaches teacher leaders and faculty at other levels can also easily reference its content where relevant This book offers multiple entry points for teachers and departments to discuss and enhance their practice making it essential reading for any math educator or professional development opportunity

A Course in Modern Geometries Judith N. Cederberg, 2013-03-09 A Course in Modern Geometries is designed for a junior senior level course for mathematics majors including those who plan to teach in secondary school Chapter 1 presents several finite geometries in an axiomatic framework Chapter 2 continues the synthetic approach as it introduces Euclid s geometry and ideas of non Euclidean geometry In Chapter 3 a new introduction to symmetry and hands on explorations of isometries precedes the extensive analytic treatment of isometries similarities and affinities A new concluding section explores

isometries of space Chapter 4 presents plane projective geometry both synthetically and analytically The extensive use of matrix representations of groups of transformations in Chapters 3 4 reinforces ideas from linear algebra and serves as excellent preparation for a course in abstract algebra The new Chapter 5 uses a descriptive and exploratory approach to introduce chaos theory and fractal geometry stressing the self similarity of fractals and their generation by transformations from Chapter 3 Each chapter includes a list of suggested resources for applications or related topics in areas such as art and history The second edition also includes pointers to the web location of author developed guides for dynamic software explorations of the Poincaré model isometries projectivities conics and fractals Parallel versions of these explorations are available for Cabri Geometry and Geometer's Sketchpad Judith N Cederberg is an associate professor of mathematics at St Olaf College in Minnesota

Black American Students in An Affluent Suburb John U. Ogbu, 2003-02-26 John Ogbu has studied minority education from a comparative perspective for over 30 years The study reported in this book jointly sponsored by the community and the school district in Shaker Heights Ohio focuses on the academic performance of Black American students Not only do these students perform less well than White students at every social class level but also less well than immigrant minority students including Black immigrant students Furthermore both middle class Black students in suburban school

districts as well as poor Black students in inner city schools are not doing well Ogbu's analysis draws on data from observations formal and informal interviews and statistical and other data He offers strong empirical evidence to support the cross class existence of the problem The book is organized in four parts Part I provides a description of the twin problems the study addresses the gap between Black and White students in school performance and the low academic engagement of Black students a review of conventional explanations an alternative perspective and the framework for the study Part II is an analysis of societal and school factors contributing to the problem including race relations Pygmalion or internalized White beliefs and expectations levelling or tracking the roles of teachers counselors and discipline Community factors the focus of this study are discussed in Part III These include the educational impact of opportunity structure collective identity cultural and language or dialect frame of reference in schooling peer pressures and the role of the family This research focus does not mean exonerating the system and blaming minorities nor does it mean neglecting school and society factors Rather Ogbu argues the role of community forces should be incorporated into the discussion of the academic achievement gap by researchers theoreticians policymakers educators and minorities themselves who genuinely want to improve the academic achievement of African American children and other minorities In Part IV Ogbu presents a summary of the study's findings on community forces and offers recommendations some of which are for the school system and some for the Black community Black American Students in an Affluent Suburb A Study of Academic Disengagement is an important book for a wide range of researchers professionals and students particularly in the areas of Black education minority education comparative and international education sociology of education educational anthropology educational policy teacher education and applied anthropology
