Elsevier's Dictionary of Chemoetymology Alexander Senning, 2006-10-30 Noting a marked lack of comprehensiveness and or contemporaneity among typical reference works on chemical etymology as well as a somewhat spotty coverage of chemical terms and their etymology in comprehensive dictionaries and textbooks the author decided to write an up to date desk reference on chemical etymology which would satisfy the needs of casual readers as well

as those of more demanding users of etymological lore Characteristic user friendly features of the present work include avoidance of cumbersome abbreviations avoidance of entries in foreign alphabets and a broad coverage of all chemical disciplines including mineralogy Biological medical geological physical and mathematical terms are only considered where they appear of interest to mainstream chemists This book does not provide definitions of terms unless required in the etymological context nor guidance as to the timeliness of different nomenclature systems The typical user will from the outset be well aware of the exact meaning of the terms he or she focuses on and only require the etymological background to be used Examples of sources which have been drawn upon in the preparation of this book apart from the extremely useful Internet resource Google are listed but an exhausting enumeration would be tiresome and impractical an up to date desk reference on chemical etymology characteristic user friendly features broad coverage of all chemical disciplines

The History of Natural History Gavin D. R. Bridson, 2008 With over 5 300 added references this revised and updated edition is an essential source of information for scientists researchers and enthusiastic amateurs The History of Natural History is one of those key works that should be kept in easy reach of anyone interested in the study of natural history in all its branches

Codex Canadensis and the Writings of Louis Nicolas François-Marc Gagnon, 2011-09-29 Part art part science part anthropology this ambitious project presents an early Canadian perspective on natural history that is as much artistic and fantastical as it is encyclopedic Edited and introduced by François Marc Gagnon The Codex Canadensis and the

Writings of Louis Nicolas showcases an intriguing attempt to document the life of the new world flora fauna and aboriginal. The book brings together for the first time the illustrated Codex Canadensis and The Natural History of the New World following Gagnon's argument that both can be attributed to Louis Nicolas, a French Jesuit priest who travelled throughout Canada between 1664 and 1675. *Histoire Naturelle des Indes Occidentales*, originally written in classical French, has been put in modern French by Ral Ouellet and translated into English by Nancy Senior. The Natural History presents a pre-Linnaean botany and pre-Darwinian account of living things including hundreds of species of plants and vivid descriptions of wildlife. It is thoroughly annotated, focusing on the contemporary identification of species as the result of a pan-Canadian collaboration of experts in fields from linguistics to biology and botany. The Codex Canadensis, currently in the collection of the Gilcrease Museum in Tulsa, Oklahoma, is reproduced in full and provides both a fascinating visual account of wildlife as Nicolas saw it and a rare example of early Canadian art. Gagnon's introduction profiles Louis Nicolas and analyses connections between his work and European examples of natural illustration from the period. The Codex Canadensis and the Writings of Louis Nicolas shows how the wildlife and native inhabitants of the new world were understood and documented by a seventeenth-century European and makes available fundamental documents in the history and visual culture of early North America.

Cultivated vegetables of the world: a multilingual onomasticon Stanley J. Kays, 2011-10-03. Vegetables make up a major portion of the diet of humans and are critical for good health. With the world population predicted to reach 9 billion people by 2050, they will play an increasingly important role in food availability. The purpose of this book is to facilitate accuracy in communication among individuals working in agriculture and a better understanding of the extent and diversity of vegetable production and utilization worldwide. Increasing global economic interdependence and trade in agricultural products makes precise communication among individuals utilizing different languages essential. There is currently a wide range of vegetables shipped around the world as seasonal, economic, and other forces are shifting markets from exclusively local toward global. The text provides up-to-date scientific names, synonyms, and common names for the commercially cultivated vegetable crops grown worldwide. 404 crops, in addition to information on the plant parts utilized and their method of preparation. Common names from 370 languages are presented along with information on each of the languages. The text represents an essential reference source with the information presented in a concise and readily accessible format. It allows identifying a crop from the common name in a diverse cross-section of languages and is therefore of use to university and government researchers, libraries worldwide, agricultural organizations, agricultural scientists, embassies, international travelers, vegetable growers, shippers, packers, produce buyers, grocery store managers, gourmet restaurants, chefs, and gardeners.

Sowing the Forest William Balée, 2023-05-23. William Balée has studied Amazonian societies and their tropical rainforests over his forty-year career. He is a world-renowned expert on the cultural and historical ecology of the Amazon basin. His 2013 book with The University of Alabama Press, *Cultural Forests of the Amazon: A Historical Ecology of People and*

Their Landscapes framed a number of his previously published articles some from what he termed obscure journals with new chapter contributions to present a powerful account of how indigenous people of the Amazon intentionally and rationally transformed the landscapes and managed the resources of the rainforests before Europeans arrived *Sowing the Forest* is a companion volume in this model combining refashioned previously published articles with new material It is a work of historical ecology and delves heavily into linguistics It deals with how over centuries Amazonian people and their cultures have interacted with rainforests making the landscapes of palm forests and other kinds of forests and how these and related forests have fed back into the vocabulary and behavior of current indigenous occupants of the remotest parts of the vast Amazonian hinterlands The book describes specific interrelationships between tropical peoples and those landscapes in terms of the forests they live in and manage rather than adapt to In general the volume describes how their language and vocabulary are reflected in the landscape transformations that their ancestors and other past peoples have effected and in some cases vocabulary has been completely lost because of colonialism The book is divided into two parts Part 1 Substrate of Intentionality comprises chapters on historical ecology indigenous palm forests plant names in Amazonia origins of the Amazonian plantain and unknown Dark Earth People of thousands of years ago and their landscaping Bal e notes that these chapters reflect how the feedback between culture and environment ends up as a complete coherent explicable phenomenon in and of itself In part 2 Scope of Transformation Bal e lays out his theory of landscape transformation which he terms primary and secondary Primary landscape transformation involves humans effecting complete species turnover and secondary landscape transformation involves humans effecting partial species turnover He provides examples of both kinds of landscape transformation and various specific effects He also compares environmental and social interrelationships for example in an Orang Asli group in Malaysia and the Kaapor people of eastern Amazonian Brazil Another chapter covers loss of language and culture resulting from primary landscape transformation in the Bolivian Amazon A final chapter addresses the controversial topic of monumentality does it exist in the rainforest His on the ground research has shown that monumentality indeed exists in great numbers e g Bolivian mounds the Brazil nut groves of the Xingu Basin and the Acre geoglyphs with more examples being discovered apace with deforestation Bal e ends by emphasizing the common thread in Amazonian historical ecology the long term phenomenon of encouraging diversity for its own sake not just for economic reasons
