Molecular Ecology And Evolution: The Organismal Side: Selected Writings From The Avise Laboratory John C Avise, 2010-08-18 This volume is a reprinted collection of 69 classics from the Avise laboratory chosen to illustrate a trademark brand of research that harnesses molecular markers to scientific studies of natural history and evolution in the wild Spanning the early 1970s through the late 2000s these articles trace how the author and his colleagues have used molecular genetics techniques to address multifarious conceptual topics in genetics ecology and evolution in a fascinating menagerie of creatures with oft peculiar lifestyles The organisms described in this volume range from blind cavefish to male pregnant pipefishes and sea spiders from clonal armadillos to natal homing marine turtles from hermaphroditic sea snails to hybridizing monkeys and tree frogs from clonal marine sponges to pseudohermaphroditic mollusks to introgressing oysters and from endangered pocket gophers terrapins and sparrows to unisexual all female fish species to living fossil horseshoe crabs and even to a strange little fish that routinely mates with itself The conceptual and molecular topics addressed in this volume are also universal ranging from punctuated equilibrium to coalescent theory to the need for greater standardization in taxonomy from cytonuclear disequilibrium statistics to the ideas of speciation duration and sympatric speciation from historical population demography to phylogenetic reconstructions of males sexual ornaments from the population genetic consequences of inbreeding to Pleistocene effects on phylogeography and from the molecular underpinnings of null alleles to the notion of clustered mutations that arise in groups to compelling empirical evidence for the unanticipated processes of gene conversion and concerted evolution in animal mitochondrial DNA Overall this collection includes many of the best most influential sometimes controversial occasionally provocative always intriguing or otherwise entertaining publications to have emerged from the Avise laboratory over the last four decades Thus this book conveys through the eyes of one of the field's longstanding pioneers what the organismal side of molecular ecology and evolution really means **Behavioral Ecology of the Eastern Red-backed Salamander** Robert G. Jaeger, Birgit Gollmann, Carl D. Anthony, Caitlin R. Gabor, Nancy R. Kohn, 2016-08-04 The small terrestrial eastern red backed salamander is abundant on many forest floors of northeastern North America Dr Robert Jaeger and many of his graduate students spent over 50 years studying this species in New York and Virginia using ecological techniques in forests and behavioral experiments in laboratory chambers in an attempt to

understand how this species interacts with other species in the forest and the components of its intra and intersexual social behaviors The competitive and social behaviors of this species are unusually complex for an amphibian This species is highly aggressive towards other similar size species where they cohabit in forests often leading to very little geographic overlap between the species The authors examine the fascinating behavioral traits of this species including social monogamy mutual mate guarding sexual coercion inter species communication and conflict resolution *Behavioral Ecology of the Eastern Red-backed Salamander* Robert Jaeger, Birgit Gollmann, 2016 Examines over fifty years of research of the red backed salamander *Recovery Plan for U.S. Pacific Populations of the Hawksbill Turtle (Eretmochelys Imbricata)* Pacific Sea Turtle Recovery Team (U.S.), 1998 Proceedings of the Ninth Annual Workshop on Sea Turtle Conservation and Biology, 7-11 February 1989, Jekyll Island, Georgia Scott A. Mast, Brian J. Hutchinson, Alec H. Conservation of Caribbean Island Herpetofaunas Volume 2: Regional Accounts of the West Indies Adrian Hailey, Byron Wilson, Julia Horrocks, 2011-04-07 Most of the islands of the Caribbean have long histories of herpetological exploration and discovery and even longer histories of human mediated environmental degradation Collectively they constitute a major biodiversity hotspot a region rich in endemic species that are threatened with extinction This two volume series documents the existing status of herpetofaunas including sea turtles of the Caribbean and highlights conservation needs and efforts Previous contributions to West Indian herpetology have focused on taxonomy ecology and evolution particularly of lizards This series provides a unique and timely review of the status and conservation of all groups of amphibians and reptiles in the region This volume provides regional accounts of the islands of the West Indies biogeographic region *Land Managers Guide to the Amphibians and Reptiles of the South* Lawrence A.
