*Teaching and Learning Mathematical Problem Solving* Edward A. Silver, 2013-04-03 A provocative collection of papers containing comprehensive reviews of previous research teaching techniques and pointers for direction of future study Provides both a comprehensive assessment of the latest research on mathematical problem solving with special emphasis on its teaching and an attempt to increase communication across the active disciplines in this area **Mathematics, Science and Technology Education Programs That Work** Luna Levinson, 1994-12 The math science technology education programs in this report provide an array of innovative ideas for elementary secondary teachers Learning ,1986

Mathematics Instruction for Students With Disabilities John F. Cawley, Louise J. Cawley, 2014-05-22 This special issue focuses on mathematics for students with disabilities particularly on the topic of division The articles discuss a number of curricula and instructional practices that have direct and meaningful implications for the classroom They also serve as a foundation for the development of research into effective intervention practices As a whole this issue provides an opportunity to extract selected features of instruction from the articles found herein and to contrast the effectiveness of two distinct instructional approaches constructivism and direct explicit instruction *Teaching Mathematics Through Problem-Solving* Akihiko Takahashi, 2021-03-31 This engaging book offers an in depth introduction to teaching mathematics through problem solving providing lessons and techniques that can be used in classrooms for both primary and lower secondary grades Based on the innovative and successful Japanese approaches of Teaching Through Problem solving TTP and Collaborative Lesson Research CLR renowned mathematics education scholar Akihiko Takahashi demonstrates how these teaching methods can be successfully adapted in schools outside of Japan TTP encourages students to try and solve a problem independently rather than relying on the format of lectures and walkthroughs provided in classrooms across the world Teaching Mathematics Through Problem Solving gives educators the tools to restructure their lesson and curriculum design to make creative and adaptive problem solving the main way students learn new procedures Takahashi showcases TTP lessons for elementary and secondary classrooms showing how teachers can create their own TTP lessons and units using techniques adapted from Japanese educators through CLR Examples are discussed in relation to the Common Core State Standards though the methods and lessons offered can be used in any country Teaching Mathematics Through Problem Solving offers an innovative new approach to teaching mathematics written by a leading expert in Japanese mathematics education suitable for pre service and in service primary and secondary math educators **Today's Education** ,1979 **The International Handbook of Educational Research in the Asia-Pacific Region** J.P. Keeves, Ryo Watanabe, 2013-11-11 The aim of the Handbook is to present readily accessible but scholarly sources of information about educational research in the Asia Pacific region The scale and scope of the Handbook is such that the articles included in it provide substantive contributions to knowledge and understanding of education in the Asia region In so doing the articles present the problems and issues facing

education in the region and the findings of research conducted within the region that contribute to the resolution of these problems and issues Moreover since new problems and issues are constantly arising the articles in the Handbook also indicate the likely directions of future developments The different articles within the Handbook seek to conceptualize the problems in each specific content area under review provide an integration of the research conducted within that area the theoretical basis of the research the practical implications of the research and the contribution of the research towards the resolution of the problems identified Thus the articles do not involve the reporting of newly conducted research but rather require a synthesis of the research undertaken in a particular area with reference to the research methods employed and the theoretical frameworks on which the research is based In general the articles do not advocate a single point of view but rather present alternative points of view and comment on the debate and disagreements associated with the conduct and findings of the research Furthermore it should be noted that the Handbook is not concerned with research methodology and only considers the methods employed in inquiry in so far as the particular methods of research contribute to the effective investigation of problems and issues that have arisen in the conduct and provision of education at different levels within the region

*Learning Directory*, 1970      **New Ground** Karen S. Sullenger, R. Steven Turner, 2015-05-07 Between 2004 and 2009 university educators practicing scientists museum and science centre personnel historians and K 12 teachers in Canada's eastern Atlantic provinces came together as a research community to investigate informal learning in science technology and mathematics The interdisciplinary collaboration known as CRYSTAL Atlantique was sponsored by Canada's National Science and Engineering Research Council In this volume the CRYSTAL participants look back on their collective experience and describe research projects that pushed the boundaries of informal teaching and learning Those projects include encounters between students and practicing scientists in university laboratories and field studies summer camps for science engagement after school science clubs for teachers and students innovative software for computer assisted learning environmental problem solving in a comparative international context online communities devoted to solving mathematical problems and explorations of ethnomathematics among Canadian aboriginal peoples The editors and contributors stress the need for research on informal learning to be informed continuously by a notion of science as culture and they analyze the forms of resistance that studies of informal learning frequently encounter Above all they urge a more central place for informal science learning in the larger agenda of educational research today
