Hdbk Of Ind Gasifi Tech:

Handbook of Gasification Technology James G. Speight, 2020-04-14 Gasification is one of the most important advancements that has ever occurred in energy production Using this technology for example coal can be gasified into a product that has roughly half the carbon footprint of coal On a large scale gasification could be considered a revolutionary development not only prolonging the life of carbon based fuels but making them greener and cleaner As long as much of the world still depends on fossil fuels gasification will be an environmentally friendlier choice for energy production But gasification is not just used for fossil fuels Waste products that would normally be dumped into landfills or otherwise disposed of can be converted into energy through the process of gasification The same is true of biofeedstocks and other types of feedstocks thus making another argument for the widespread use of gasification The Handbook of Gasification Technology covers all aspects of the gasification in a one stop shop from the basic science of gasification and why it is needed to the energy sources processes chemicals materials and machinery used in the technology Whether a veteran engineer or scientist using it as a reference or a professor using it as a textbook this outstanding new volume is a must have for any library

Industrial Alcohol Technology Handbook NPCS Board of Consultants & Engineers, 2010-10-02 Production of industrial alcohol is an age old practice But with time the usage areas as well as production techniques have gone through a major transformation Industrial alcohol is distilled ethyl alcohol C_2H_5OH normally of high proof produced and sold for other than beverage purposes It is usually distributed in the form of pure ethyl alcohol completely denatured alcohol especially denatured alcohol and proprietary solvent blends Ethyl Alcohol is the common name for the hydroxyl derivative of the hydrocarbon ethane Industrial alcohol is distilled ethyl alcohol normally of high proof produced and sold for other than beverage purposes Industrial alcohol finds its applications in many chemical industries pharmaceutical industries Ink Industries and various allied applications Much of this alcohol is obtained synthetically from ethylene However its production from microbial fermentation using variety of cheap sugary substrates is still commercially important The various substrates used for ethanol production are sugar crops such as sugarcane sugar beet sorghum etc provide a good substrate Bye product of these crop processing e g molasses sweet sorghum syrup etc are the most common substrates Cereals like maize wheat rice etc are also used for ethanol production Distillation of industrial alcohol which is normally not used for consumption can be made in a two step process The process of distillation is one with a slow dynamics making it essential to have a carefully planned and designed control system Ethyl alcohol or ethanol ranks second only to water as the most widely used solvent in chemical industry and as these industries have expanded so the demand for industrial alcohol has increased Some of the fundamentals of the book are base case production of alcohol survey and natural alcohols manufacture alcohol from wheat straw alcohol from sacchariferous feed stocks conventional process used in Indian distilleries fermentation distillation continuous rectification and reflux ratio alcohol recovery quality of alcohol steam economy fuel oil separation trihydric and

Industrial Coal Gasification Technologies Covering Baseline and High-Ash Coal Martin Gräbner, 2014-11-24 The ongoing discussion about reaching the peak oil point maximal delivery rate with conventional methods emphasizes a fundamental change of the frame conditions of oil based basic products The alternative with the largest potential is the use of coal Coal gasification is the production of coal gas a mixture of mainly hydrogen and carbon monoxide from coal adding agents like steam water and oxygen which can be used in a number of industrial processes e g hydroformulation and Fischer Tropsch process Many different kinds of coal do naturally occur and

due to shrinking natural resources there has been a substantial gain of interest in poor ash rich coal. Beside the quality of coal there is a number of other parameters influencing the efficiency of coal gasification such as temperature pressure and reactor type. Although several books dealing with the subject of gasification have recently been published few are strictly focussed on coal as feedstock. This monograph provides the reader with the necessary chemical background on coal gasification. Several types of coal baseline coal and ash rich coal are compared systematically pointing out the technological efforts achieved so far to overcome this challenge. Using a new innovative order scheme to evaluate the gasification process at a glance the ternary diagram the complex network of chemistry engineering and economic needs can be overviewed in a highly efficient way. This book is a must have for Chemical and Process Engineers Engineering Students as well as Scientists in the Chemical Industry.

Handbook of Industrial Drying Arun S. Mujumdar, 2014-07-11. Addressing commonly encountered dryers as well as innovative dryers with future potential the fully revised text not only delivers a comprehensive treatment of the current state of the art but also serves as a consultative reference for streamlining industrial drying operations to increase energy efficiency and cost effectiveness.

Handbook of Energy Management in Agriculture Amitava Rakshit, Asim Biswas, Deepranjan Sarkar, Vijay Singh Meena, Rahul Datta, 2023-05-15. This handbook provides a holistic overview of different aspects of energy management in agriculture with an orientation to address the sustainable development goals. It covers possible applications not only from a technical point of view but also from economic financial social regulatory and political viewpoints. Agriculture is one of the most imperative sectors that contribute to the economy across different agro ecologies of the universe with energy inputs in each stage of production from making and applying chemicals to fueling tractors that lay seeds and harvest crops to electricity for animal housing facilities. The majority of agricultural research has focused on the use of input production and productivity whereas rational energy budgeting and use remain an overlooked and likely underestimated segment ignored so far while formulating agro ecosystem framework. Energy management study is a new frontier of agriculture and is challenging due to complex enterprises spatial temporal variability exposure to pollution and the predominant effect of the anthropogenic factor on ecology and environment. But it is worth taking the challenge considering the important prerequisite role of energy for sustainable development which has been evidenced from increasing research in recent times. Of recent origin there are critical in depth studies around the globe assessing the capture and flow of energy in the ecosystem which will help to develop a conceptual framework to incorporate this vital resource in the agriculture management template. This book is a state of the art resource for a broad group of readers including a diversity of stakeholders and professionals in universities public energy institutions farmers and farming industry public health and other relevant institutions and the broader public as well.
