## **Healing Gaia Practical Medicine For The Planet:**

*Healing Gaia* James Lovelock, J. E. Lovelock, 1991 The creator of the Gaia theory that the Earth is a living organism applies the traditional medical disciplines to ecological problems and solutions here are anatomy biochemistry metabolism etc Brightly illustrated with color mostly stylized drawings on nearly every page to appeal to the general reader armchair ecoterrorist and science fiction fan No bibliography Annotation copyrighted by Book News Inc Portland OR **Healing Gaia** James Lovelock, 1991-08-01 By applying medical science to our planet as a whole Lovelock visionary creator of the Gaia theory that the earth acts as a single living organism gives us an exciting new way of understanding the frailties strengths of planet earth Here he expands his original concept to ask perhaps the most pressing question of all if the planet is alive what is its health In answering he explores the real effects of the threats we hear so much about acid rain deforestation ozone depletion the widespread extinction of species so on Finally he provides guidelines for a healthy global environment that will ensure the future of our species Color illustrations **Healing Earth** John Todd, 2019-01-29 A true pioneer and respected elder in ecological recovery and sustainability shares effective solutions he has designed and implemented A stand out from the sea of despairing messages about climate change well known sustainability elder John Todd who has taught mentored and inspired such well known names in the field as Janine Benyus Bill McKibben and Paul Hawken chronicles the different ecological interventions he has created over the course of his career Each chapter offers a workable engineering solution to an existing environmental problem healing the aftermath of mountain top removal and valley fill coal mining in Appalachia using windmills and injections of bacteria to restore the health of a polluted New England pond working with community members in a South African village to protect an important river A mix of both success stories and concrete suggestions for solutions to tackle as yet unresolved issues Todd s narrative provides an important addition to the conversation about specific ways we can address the planetary crisis Eighty five color photos and images illustrate Todd s concepts This is a refreshingly hopeful proactive book and also a personal story that covers a known practitioner s groundbreaking career *Gaia in Turmoil* Eileen Crist, H. Bruce Rinker, 2010 Essays link Gaian science to such global environmental quandaries as climate change and biodiversity destruction providing perspectives from science philosophy politics and technology **The Lost Language of Plants** Stephen Harrod Buhner, 2002-03-01 Nautilus Book Awards Ecology Environment ForeWord Reviews Book of the Year Silver Medal Environment In the pharmaceutical Silent Spring well known author teacher lecturer and herbalist Stephen Harrod Buhner has produced a book that is certain to generate controversy Inside The Lost Language of Plants you ll find A critique of technological medicine and especially the dangers to the environment posed by pharmaceuticals and other synthetic substances that people use in connection with health care and personal body care A new look at Gaia Theory including an explanation that plants are the original chemistries of Gaia and those phytochemistries are the fundamental communications network for the Earth s ecosystems Extensive documentation of how plants communicate

their healing qualities to humans and other animals Western culture has obliterated most people's capacity to perceive these messages but this book also contains valuable information on how we can restore our faculties of perception The book will affect readers on rational and emotional planes It is grounded in both a New Age spiritual sensibility and hard science While some of the author's claims may strike traditional thinkers as outlandish Buhner presents his arguments with such authority and documentation that the scientific underpinnings however unconventional are completely credible The overall impact is a powerful eye opening expos of the threat that our allopathic Western medical system in combination with our unquestioning faith in science and technology poses to the primary life support systems of the planet At a time when we are preoccupied with the terrorist attacks and the possibility of biological warfare perhaps it is time to listen to the planet This book is essential reading for anyone concerned about the state of the environment the state of health care and our cultural sanity

Anthropocene Religion Michael Barnes Norton, 2025-02-28 Anthropocene Religion argues that addressing a future and present shaped by worldwide catastrophic climate change involves not only radically rethinking the ideas of nature and humanity's place within it inherited from Western modernity It also demands a reconceptualization of the nature and role of religion The advent of the Anthropocene simultaneously displaces the human from the centre of the world and erodes all sharp distinctions between the natural environment and the realm of human activity Similarly the Anthropocene renders untenable concepts of religion that rely on reference to realms beings or forces that wholly transcend nature It is however possible to understand both religion and its divine referents in worldly rather than transcendent terms just as it is possible to understand nature as dynamic and creative The Gaia hypothesis offers us a figure through which to approach these concepts in their interconnectedness Global Emergency Actions Alan Wittbecker, 2007-02-27 *The Environment and Science*

Christian C. Young, 2005-04-25 A fascinating look at the historical relationship between environmental issues and scientific study social attitudes and public policy from the 17th century to the present The Environment and Science Social Impact and Interaction explores the history of how science investigates nature and how those studies both shape and are shaped by the social attitudes philosophies and politics of their times It follows the changes in perceptions of the natural world and humankind's place in it from the European colonization of North America through the Industrial Revolution and westward expansion to the rise of the consumer economy and the recent hardening of the ideological battle lines over environmental policy Coverage includes the emergence of ecology as a science and conservation as a movement the long history of conflicts between business interests and environmentalists and the role of scientific studies in debates over atomic and nuclear power pesticides toxic emissions and other human made sources of environmental degradation Complex Biological Systems Irina R. Fomina, Karl Y. Biel, Vladislav G. Soukhovolsky, 2018-11-06 Written and edited by some of the most well respected authors in the area of the adaptation of plants and animals to climate change this groundbreaking new work is an extremely important scientific contribution to the study of global warming Global climate change is one of the most serious and

pressing issues facing our planet Rather than a silver bullet or a single study that solves it the study of global climate change is like a beach with each contribution a grain of sand gathered together as a whole to create a big picture moving the science forward This new groundbreaking study focuses on the adaptation and tolerance of plants and animal life to the harsh conditions brought on by climate change or global warming Using the papers collected here scientists can better understand global climate change its causes results and ultimately the future of life on our planet The first section lays out a methodology and conceptual direction of the work as a whole covering the modeling approaches and the impacts studied throughout the book The second section focuses on certain hypotheses laid out by the authors regarding how plants and animal life can adapt and survive in extreme environments The third section compiles a series of ecological experiments and their conclusions and a final section is dedicated to previous scientific breakthroughs in this field and the scientists who made them Whether for the scientist in the field the student or as a reference this groundbreaking new work is a must have Focusing on a small part of the global climate change beach this grain of sand is an extremely important contribution to the scientific literature and a step forward in understanding the problems and potentialities of the issue      *Green Psychology*

Ralph Metzner, 1999-06-01 A visionary ecopsychologist examines the rift between human beings and nature and shows what can be done to bring harmony to both the ecosystem and our own minds Shows that the solution to our ecological dilemma lies in our own consciousnesses It is becoming more and more apparent that the causes and cures for the current ecological crisis are to be found in the hearts and minds of human beings For millennia we existed within a religious and psychological framework that honored the Earth as a partner and worked to maintain a balance with nature But somehow a root pathology took hold in Western civilization the idea of domination over nature and this led to an alienation of the human spirit that has allowed an unprecedented destruction of the very systems which support that spirit In *Green Psychology* Ralph Metzner explores the history of this global pathology and examines the ways that we can restore a healing relationship with nature His search for role models takes him from shamanic ceremonies with the Lacandon Maya of Mexico to vision quests in the California desert from the astonishing nature mysticism of Hildegard von Bingen to the Black Goddesses and Green Gods of our pagan ancestors He examines the historical roots of the split between humans and nature showing how first sky god worshipping cultures then monotheisms and finally mechanistic science continued to isolate the human psyche from the life giving Earth His final chapters present a solution showing that disciplines such as deep ecology and ecofeminism are creating a worldview in which the mind of humanity and the health of the Earth are harmoniously intertwined

*Mathematics for the Environment* Martin Walter, 2011-01-18 *Mathematics for the Environment* shows how to employ simple mathematical tools such as arithmetic to uncover fundamental conflicts between the logic of human civilization and the logic of Nature These tools can then be used to understand and effectively deal with economic environmental and social issues With elementary mathematics the book se      *Ecological Ethics* Patrick Curry, 2011-07-12 In this thoroughly revised

and updated second edition of the highly successful Ecological Ethics Patrick Curry shows that a new and truly ecological ethic is both possible and urgently needed With this distinctive proposition in mind Curry introduces and discusses all the major concepts needed to understand the full range of ecological ethics He discusses light green or anthropocentric ethics with the examples of stewardship lifeboat ethics and social ecology the mid green or intermediate ethics of animal liberation rights and dark or deep green ecocentric ethics Particular attention is given to the Land Ethic the Gaia Hypothesis and Deep Ecology and its offshoots Deep Green Theory Left Biocentrism and the Earth Manifesto Ecofeminism is also considered and attention is paid to the close relationship between ecocentrism and virtue ethics Other chapters discuss green ethics as post secular moral pluralism and pragmatism green citizenship and human population in the light of ecological ethics In this new edition all these have been updated and joined by discussions of climate change sustainable economies education and food from an ecocentric perspective This comprehensive and wide ranging textbook offers a radical but critical introduction to the subject which puts ecocentrism and the critique of anthropocentrism back at the top of the ethical intellectual and political agenda It will be of great interest to students and activists and to a wider public

Brophy, 2001-03-27 Brilliant important strongly recommended reads at times like a Tom Robbins of physics Jacquelyn Small author of Awakening in Time and Becoming a Practical Mystic With this book Thomas Brophy establishes his credentials as a paradigmatic rarest of thinkers whose models of reality not only enhance human understanding of their world but give form to new historical movements By integrating several cutting edge paradigms and by highlighting the role of spirit in the universe The Mechanism Demands a Mysticism is sure to inform instruct entertain and even inspire its readers Stanley Krippner Ph D former president of the American Psychological Association's Division of Humanistic Psychology author of Dream Telepathy Integrating the words of many holy people with scientific theories and a study of phenomena Brophy indicates the limitations of scientific and religious dogmas this kind of integration will become more and more necessary in the next century Hiroshi Motoyama Ph D Litt D author of Karma and Reincarnation Head Priest of Tamamitsu Shinto Shrine Tokyo Well just a few pages has turned into reading the whole thing Eminently readable and highly entertaining or infotaining A good book Never thought of juxtaposing Newton and Basho myself Yasuhiko Kimura CEO of the University of Science Philosophy and Director of the Twilight Club Center for Evolutionary Ethics former Zen priest Your ideas are profound The Mechanism Demands a Mysticism deserves a broader exposure Jeffrey Mishlove Ph D host of Thinking Allowed and Virtual U Wisdom Radio You are opening the eyes of scientists all over Bravo Judith Orloff M D Board Certified Psychiatrist author of Second Sight

**Nature's Economy** Donald Worster, 1994-06-24 Nature's Economy is a wide ranging investigation of ecology's past first published in 1994

**The Wild and the Toxic** Jennifer Thomson, 2019-03-27 Health figures centrally in late twentieth century environmental activism There are many competing claims about the health of ecosystems the health of the planet and the health of humans yet there is little agreement among

the likes of D C lobbyists grassroots organizers eco anarchist collectives and science based advocacy organizations about whose health matters most or what health even means In this book Jennifer Thomson untangles the complex web of political social and intellectual developments that gave rise to the multiplicity of claims and concerns about environmental health Thomson traces four strands of activism from the 1970s to the present the environmental lobby environmental justice groups radical environmentalism and bioregionalism and climate justice activism By focusing on health environmentalists were empowered to intervene in the rise of neoliberalism the erosion of the regulatory state and the decimation of mass based progressive politics Yet as this book reveals an individualist definition of health ultimately won out over more communal understandings Considering this turn from collective solidarity toward individual health helps explain the near paralysis of collective action in the face of planetary disaster Living with the Adirondack Forest Catherine Henshaw Knott,2018-09-05 Attitudes about land use Catherine Henshaw Knott suggests may reflect profound differences in class religion and life experience pitting urban Americans who see nature at risk against rural Americans whose lives are dominated by nature s forces She documents the thoughts and feelings of people whose lives are intimately connected to the forest including loggers trappers craftspeople and guides as well as tree farmers and maple syrup producers After describing the key players in the conflict and chronicling battles and bridge building between stake holders Knott concludes that the participation of local people in decision making is the only process that can shift an increasingly hostile cycle toward resolution **The Green Imperative: Ecology and Ethics in Design and Architecture** Victor Papanek,2022-02-01 A fresh edition of the sustainable design pioneer Victor Papanek s classic and ever relevant book examining the important role of design in combating climate change Whether it s horror at the plastic littering the world s beaches or despair at the melting polar ice caps the world is gradually waking up to the impending climate disaster In *The Green Imperative* Papanek argues for design that addresses these issues head on This means using materials that can be recycled and reused no more pointless packaging thinking about how products make us feel and engage all our senses putting nature at the heart of design working at a smaller scale rejecting aesthetics for their own sake and thinking before we buy First published at the end of the twentieth century this book offered a plethora of honest advice clear examples and withering critiques laying out the flaws of and opportunities for the design world at that time A quarter of a century on Papanek s lucid prose has lost none of its verve and the problems he highlights have only become more urgent giving today s reader both a fascinating historical perspective on the issues at hand and a blueprint for how they might be solved **Mappings** Denis Cosgrove,1999-04-01 *Mappings* explores what mapping has meant in the past and how its meanings have altered How have maps and mapping served to order and represent physical social and imaginative worlds How has the practice of mapping shaped modern seeing and knowing In what ways do contemporary changes in our experience of the world alter the meanings and practice of mapping and vice versa In their diverse expressions maps and the representational processes of mapping have constructed the spaces

of modernity since the early Renaissance The map s spatial fixity its capacity to frame control and communicate knowledge through combining image and text and cartography s increasing claims to scientific authority make mapping at once an instrument and a metaphor for rational understanding of the world Among the topics the authors investigate are projective and imaginative mappings mappings of terraqueous spaces mapping and localism at the chorographic scale and mapping as personal exploration With essays by Jerry Brotton Paul Carter Michael Charlesworth James Corner Wystan Curnow Christian Jacob Luciana de Lima Martins David Matless Armand Mattelart Lucia Nuti and Alessandro Scafì     Fundamentals of Ecotoxicology Michael C.
