Mesiäislehto ,2022-04-08 This book highlights the embodied knowledge of persons with disabilities as a vital resource for
understanding equality without taking disability and development for granted The perspective of embodied inequality offers
alternative ways to comprehend our normality as until now the notion of normality has too frequently excluded persons with
disabilities and their perspectives Disability inclusion has never been as important as it is today in the development discourse
yet systematic discrimination against people due to their disabilities persists To address this the link between theories and
practices is strengthened in this book Through using different contexts in the different book chapters the readers are
informed of how profoundly inequalities are embedded in our society and pronounced as embodied experiences of persons
with disabilities The chapters are written not only by academics but also by disability activists and NGO representatives The
chapters focus on disabilities and development as embodied inequalities manifested at different levels including theory law
and policy and practice In conclusion the book presents 6 A s as lessons learned from decolonial understanding and

Accountability Assistance and Affection **Geographies of Race and Food** Rachel Slocum, Arun Saldanha, 2016-04-15
While interest in the relations of power and identity in food explodes a hesitancy remains about calling these racial What
difference does race make in the fields where food is grown the places it is sold and the manner in which it is eaten How do
we understand farming and provisioning tasting and picking eating and being eaten hunger and gardening better by paying
attention to race This collection argues there is an unacknowledged racial dimension to the production and consumption of
food under globalization Building on case studies from across the world it advances the conceptualization of race by
emphasizing embodiment circulation and materiality while adding to food advocacy an antiracist perspective it often lacks
Within the three socio physical spatialities of food fields bodies and markets the collection reveals how race and food are

intricately linked An international and multidisciplinary team of scholars complements each other to shed light on how human groups become entrenched in myriad hierarchies through food at scales from the dining room and market stall to the slave trade and empire Following foodways as they constitute racial formations in often surprising ways the chapters achieve a novel approach to the process of race as one that cannot be reduced to biology culture or capitalism

Bioethics Reenvisioned Nancy M. P. King, Gail E. Henderson, Larry R. Churchill, 2022-11-29 Bioethics needs an expanded moral vision Born in the ferment of the 1970s the field responded to rapid developments in biomedical technology and injustices in clinical care and research Since then

bioethics has predominantly focused on respect for autonomy beneficence and nonmaleficence and the zero sum lifeboat ethics of distributive justice applying these principles almost exclusively within the walls of medical institutions It is now time for bioethics to take full account of the problems of health disparities and structural injustice that are made newly urgent by the COVID 19 pandemic and the effects of climate change This book shows why and how the field must embrace a broader and more meaningful view of justice principally by incorporating the tools and insights of the social sciences epidemiology and public health Nancy M P King Gail E Henderson and Larry R Churchill make the case for a more social understanding and application of justice a deeper humility in assessing expertise in bioethics consulting a broader and more relevant research agenda and greater appreciation of the profound health implications of global warming

Migration and Health
Heide Castañeda, 2022-07-27 Migration and Health Critical Perspectives offers a radical rethinking of the field by unsettling conventional ideas of mobility and borders to highlight the ways in which they produce health inequalities Covering a wide range of topics the text provides insight through a critical lens and proposes areas for intervention along with an added emphasis on the need for future research to address the health inequities that affect migrants It illustrates how a critical perspective can deepen our understanding of the relationship between migration and health which remains a defining global issue of our century The text employs a critical approach to examine the structural conditions of inequality and larger historical and political processes recognizing that exclusionary bordering practices increasingly occur away from physical points of entry It posits the concept of migration as complex tangled and multi directional and underscores how migrant vulnerability can shape the lives of people in wider communities Furthermore it acknowledges diverse and intersectional standpoints as well as shifting spatial and temporal influences Chapters include coverage of health in transit healthcare access and utilization clinical encounters communicable disease labor and occupational health gender and sexuality immigration enforcement detention deportation and the effects of forced displacement on refugee and asylum seeker health The text is useful for students and scholars of migration or health disparities seeking to understand how the two issues can be approached in a more holistic and critical way It is further aimed at practitioners and policymakers who are interested in gaining familiarity with the structural conditions of inequality along with the larger historical and political processes that influence contemporary migration patterns

Counting Matters Christina Gabriel, L. Pauline Rankin, 2024-04-15 Counting Matters examines the ways in which the rise of gender equality measurement contributes to but falls short of effective gender equality policy implementation As technocrats adopt often contextless indices questions of the theoretical and practical limitations of measurement arise especially as they pertain to social and cultural relations The indicators being produced influence the allocation of resources as political decisions but are themselves part of a power regime based on the collection and analysis of data a regime that obfuscates biases and the agendas behind the statistics The book's contributors pose critical questions of the ways in which measurement culture manifests within the field of gender equality asking how it is measured in different policy areas how we might improve existing practices and what is revealed through the examination and critique of the technical turn in policies that purport to promote gender equality Geographies of Health Anthony C. Gatrell, Susan J. Elliott, 2014-10-15 Setting out the debates and reviewing the evidence that links health outcomes with social and physical environments this new edition of the well established text offers an accessible overview of the theoretical perspectives methodologies and research in the field of health geography Includes international examples drawn from a broad range of countries and extensive illustrations Unique in its approach to health geography as opposed to medical geography New chapters focus on contemporary concerns including neighborhoods and health ageing and emerging infectious disease Offers five new case studies and a fresh emphasis on qualitative research approaches Written by two of the leading health geographers in the world each with extensive experience in research and policy
