Embryogenesis in Mammals Katherine Elliott, Maeve O'Connor, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world The Early Development of Mammals British Society for Developmental Biology, 1975-08-21 Ciba Foundation Symposium 40 - Embryogenesis in Mammals Ciba Foundation, **Embryogenesis in Mammals** CIBA Foundation Staff,

Embryogenesis in Mammals Katherine May Elliott, Maeve O'Connor, 1976 **Experimental Approaches to Mammalian Embryonic Development** Janet Rossant, Roger A. Pedersen, 1988-11-25 Recent advances in the experimental analysis of the mammalian embryo are discussed from various scientific perspectives in this summary of major breakthroughs in embryonic development *Concepts in Mammalian Embryogenesis* Michael I. Sherman, 1977-01 This volume the first in the MIT Cell Monograph Series offers a thorough overview of a few selected topics in mammalian embryogenesis that are of current interest and interrelate well with each other Most of the studies described deal with the mouse embryo since laboratory maintenance of mice is convenient and the genetics of the mouse are well established One of the underlying themes throughout the chapters is the programming of events in early embryogenesis The activation of however embryologists have yet to explain how the microenvironment can trigger a cell to embark on a specific course of differentiation Various methods used in investigating this problem and a chapter on the possible role of viruses in the control of embryonic development completes the volume In summary the editor states the chapters in this monograph demonstrate that mammalian embryologists are now equipped with morphological biochemical and molecular biological markers of early embryonic development and differentiation Model systems are available for testing ideas of genetic and epigenetic control mechanisms With proper use of these resources our understanding of mammalian embryogenesis could be revolutionized within the next decade Text-book of the Embryology of Man and Mammals Oscar Hertwig, 1892 Text-book of the embryology of man and mammals Oskar Hertwig, 1905 **Development in Mammals** M. H. Johnson, 1977

Development in Mammals M. H. Johnson, 1977 *Growth Factors in Mammalian Development* I. Y. Rosenblum, Susan Heyner, 2021-05-30 The purpose of this volume is to review and discuss key growth factor systems that have been implicated in embryogenesis Emphasis is placed on the insulin family of peptides including insulin and the structurally and functionally related insulin like growth factors The initial chapters provide a review of basic topics including developmental genetics energy metabolism and hormonal signaling mechanisms which are important prerequisites to the central theme that follows The book concludes with a brief review of oncogene expression in early development this new field has contributed significantly to our understanding of how mitogenic signals activate genetic elements responsible for embryonic growth and

development This book presents information important to cell biologists endocrinologists biological chemists and developmental biologists **Methods in Mammalian Reproduction** Joseph C. Jr. Daniel, 2012-12-02 **Methods in Mammalian Reproduction** presents some of the techniques for manipulating analyzing observing testing and generally experimenting with mammalian mothers and their gametes and embryos Mammalian reproduction involves an intimate relationship between mother and embryo The first 18 chapters are arranged in an order that follows a developmental sequence from oocyte to fetal organs and the remaining seven chapters deal with the maternal side of the relationship With strong focus on laboratory rodents and lagomorphs the book starts with an introduction to in vitro oocyte maturation and experimental production of mammalian parthenogenetic It goes on to describe the microtechniques in pre implantation of embryos production of chimeras techniques for early embryonic tissue separation mammalian embryo preservation by freezing and in vitro development of whole mouse embryos beyond the implantation stage Chapters 11 15 discuss the in vitro implantation of mouse blastocysts advances in rabbit embryo and in large mammal embryo cultures embryo transfer in large domestic mammals and manipulation of marsupial embryos and pouch young The following chapters cover reproduction experiments using marsupials domestic farm species and primates including humans Finally the concluding chapters tackle the use of amniocentesis in prenatal diagnosis collection and analysis of female genital tract secretions analysis of antifertility action of intrauterine devices and surgical induction of endometriosis This book will be helpful to students teachers researchers and clinical researchers who demand for more and better procedures for analysis of mammalian reproduction *The Embryonic Development of the Ovary and Testis of the Mammals ...* Bennet Mills Allen, 1903 Early Embryonic Development of Animals Wolfgang Hennig, 2013-06-05 Four of the major animal systems studied for the mechanisms of their early embryonic development are treated in this volume The articles address the specific questions studied in the various systems discuss the fundamental questions raised by the particular organism and explain the techniques used to find answers to these questions Questions of patternformation early organogenesis and the genetics of the early development are covered as well as the question of parental imprinting phenomena in mammals which are important for the early differentiation The development of the mouse *Drosophila* *Caenorhabditis* and the zebrafish is emphasized by leading experts of their fields and current problems in each system are exposed For the zebrafish the advantages of this new system for developmental biology studies are summarized and discussed in their values while in the other system the emphasis is laid on one of the actual field of research Living Embryos Jack Cohen, Brendan Massey, 2014-05-20 **Living Embryos** An Introduction to the Study of Animal Development covers the growth of an animal embryo specifically the sequence developmental events of an egg This book addresses the mammalian embryo as a homograph and demonstrates early vertebrate development mechanisms Some of the topics covered in the book are the early embryology development and growth of the frog mammals chick rabbit arthropods polychaetes nematodes molluscs and

tunicates Other chapters deal with the formation of the nervous muscular and alimentary systems These topics are followed by the analysis of the development of fishes The discussion then shifts to the method of fertilization The last chapters examine the formation of cleavage cleavage geometry embryonic membranes and organization of the egg The book can provide useful information to embryologists biologists students and researchers *Development* V.E.A. Russo,D.J. Cove,L.G. Edgar,R. Jaenisch,F. Salamini,2012-12-06 Studies of selected model organisms have led to a greatly improved understanding not only of the molecular events which take place during development under the control of specific sets of genes but also of epigenetic and environmental influences on these processes This book gives an overview of all three of these levels and their relative importance and as such will give the reader a clear picture of one of the most exciting areas of current biological research *Reproduction in Mammals: Volume 2, Embryonic and Fetal Development* C. R. Austin,R. V. Short,1982

Human Embryology and Developmental Biology E-Book Bruce M. Carlson,2023-08-26 Bruce Carlson s Human Embryology and Developmental Biology is one of the most detailed texts available for those who want to truly understand both the morphological and molecular aspects of human embryological development Fully updated in its seventh edition the book provides a thorough grounding in all aspects of embryology It presents in detail the molecular and cellular basis for embryological processes from early development through to development of body systems It covers examples of congenital malformations and their underlying mechanisms and comes complete with clinical vignettes and review questions to support learning This book will suit medical and science students taking embryology courses as well as scientists and clinicians who find themselves returning to this topic throughout their careers Clear and consistent writing style highly readable and well focused Extensively illustrated to demystify complex topics Good selection of original photographs of congenital anomalies to assist with identification Review questions and suggested readings for further learning Series of animations of complex embryological processes to accompany the text explanations Clinical correlation boxes vignettes and summary boxes for quick revision An enhanced eBook version is included with purchase The eBook allows you to access all the text figures and references with the ability to search customize your content make notes and highlights and have content read aloud Many new drawings and photographs Thoroughly updated with recent research to advance understanding Expanded treatment of newly understood molecular pathways Major updates on gametes body axis formation placental pathology adipose tissue intestinal and facial development *DEVELOPMENT in Mammals* ,1977
