Hazards And Responses:

Chemical Hazards Response Information System, 1999 Geomorphological Hazards in Los Angeles R.U.

Cooke, 2022-02-01 This book first published in 1984 deals authoritatively with the nature and management of slope failures and sediment movement and their impact on the hazardous landscape of Los Angeles county Bringing together for the first time a wide range of information derived from field observations interviews manuscript records local agency reports and published sources the book presents an analysis of the ways in which a rapidly developing metropolis has come to terms with complex geomorphological hazards In particular the events accompanying the major storms of 1914 1934 1969 and 1978 are reconstructed in detail *The Environment as Hazard* Ian Burton, 1993-04-09 The Environment as Hazard offers an

understanding of how people around the world deal with dramatic fluctuations in the local natural systems of air water and terrain Reviewing recent theoretical and methodological changes in the investigation of natural hazards the authors describe how research findings are being incorporated into public policy particularly research on slow cumulative events technological hazards the role played by social systems and the relation of hazards theory to risk analysis Through vivid examples from a broad sample of countries this volume illuminates the range of experiences associated with natural hazards The authors show how modes of coping change with levels of economic development by contrasting hazards in developing countries with those in high income countries comparing the results of hurricanes in Bangladesh and the United States and earthquakes in Nicaragua and California In new introductory and concluding chapters that supplement the original text the authors present new global data sets as well as a trenchant discussion of implications of hazards research for the International Decade for Natural Disaster Reduction and for attempts by the world community to come to grips with the threats of climate change **Ethics, Law and Natural Hazards** Lauren Traczykowski, 2021-03-08 This book argues that

the international community has a moral duty to intervene on behalf of a population affected by a natural hazard when their government is either unable or unwilling to provide basic life saving assistance The work draws on law international relations theory and political philosophy to articulate that non response to a natural hazard is unethical In providing policy suggestions the author articulates what should happen based on an ethical analysis Readers will thus gain an ethical lens with which to view intervention in the aftermath of a natural hazard The book encourages readers to consider the nuances of arguments from various disciplines about whether or not intervention is appropriate Whilst arguing throughout that an intervention policy in response to natural hazards should be developed by the international community the study also accounts for why intervention should only be used in very limited situations This interdisciplinary approach makes the book essential reading for researchers academics and policy makers working in the areas of international law humanitarian studies human rights international relations and political science **Geography, Resources and Environment, Volume 2** Gilbert F.

White, 1986 Over the course of half a century Gilbert F White s work has served to shape and in several instances establish

many of the fields that have come to be known as the environmental sciences In this collection of original essays a companion volume to White's selected writings volume I leading scholars in areas such as water supply environmental hazards and natural resource management interpret changes in these fields since White's work and assess present and future problems With volume 1 this collection presents a complete and cogent picture of Gilbert White's contribution and the work he inspired

Climate Forcing of Geological Hazards Bill McGuire, Mark A. Maslin, 2012-12-10 Climate Forcing of Geological Hazards provides a valuable new insight into how climate change is able to influence modulate and trigger geological and geomorphological phenomena such as earthquakes tsunamis volcanic eruptions and landslides ultimately increasing the risk of natural hazards in a warmer world Taken together the chapters build a panorama of a field of research that is only now becoming recognized as important in the context of the likely impacts and implications of anthropogenic climate change The observations analyses and interpretations presented in the volume reinforce the idea that a changing climate does not simply involve the atmosphere and hydrosphere but also elicits potentially hazardous responses from the solid Earth or geosphere Climate Forcing of Geological Hazards is targeted particularly at academics graduate students and professionals with an interest in environmental change and natural hazards As such we are hopeful that it will encourage further investigation of those mechanisms by which contemporary climate change may drive potentially hazardous geological and geomorphological activity and of the future ramifications for society and economy
