background which can be applied practically to maritime critical infrastructure accident consequences analysis Includes a general model for critical infrastructure accident consequences which is globally applicable and with wide applications in various industrial sectors *Review of Maritime Transport 2024* United Nations Trade and Development (UNCTAD),2024-10-22 Global maritime trade grew by 2.4% in 2023 recovering from a 2022 contraction but the recovery remains fragile Key chokepoints like the Suez and Panama Canals are increasingly vulnerable to geopolitical tensions conflicts and climate change These disruptions are extending shipping routes straining supply chains and raising costs with profound impacts on food security energy supplies and the global economy as over 80% of world trade volume is carried by sea Vulnerable economies especially small island developing States and least developed countries are hit hardest by rising shipping costs from rerouted vessels The Review of Maritime Transport 2024 highlights these challenges calling for urgent action to strengthen industry resilience accelerate decarbonization and support vulnerable economies It underscores the need for new infrastructure that is sustainable and resilient a faster transition to low carbon shipping and a crackdown on fraudulent ship registrations to safeguard global trade **Disaster Management and Human Health Risk IV** S.M. Sener,C.A. Brebbia,O. Ozcevik,2015-05-20 As human population has continued to concentrate in urban areas the number of people and the value of property affected by disasters both natural and human generated have grown as well Earthquakes floods hurricanes cyclones tornadoes and forest fires have all taken their toll so have such anthropogenic disasters as pipeline failures industrial spills and terrorist attacks The contents of this volume consist of papers presented at the fourth in a series of conferences convened to assess the potential risk from various disasters and discuss ways to prevent or mitigate damage The papers have been contributed by experts on public health security and disaster management from academia industry and government Topics covered include Disaster Analysis Disaster Monitoring and Mitigation Emergency Preparedness Risk Mitigation Risk and Security Safety and Resilience Socio economic Issues Health Risk Human Factors Multi hazard Risk Assessment Case Studies *Advanced Technologies and Methodologies for Risk Management in the Global Transport of Dangerous Goods* Azedine Boulmakoul,Emmanuel Garbolino,2008-09-15 In the last few years logistics has become a strategic factor for development and competition In fact research and development activities have traditionally faced the management of supply chain and international transport focussing on two main aspects speed and efficiency However several vulnerabilities have recently been highlighted under a safety and security viewpoint The weakness of the logistic chains has become more evident with the beginning of the new millennium Terrorist attacks such as the 11th of September 2001 in the USA have caused the introduction of new rules and procedures which affect the overall logistics showing the vulnerability of the global economy So nowadays it would appear anachronistic to carry out an exhaustive research activity on the supply chain with no relation to the various typologies of risk which may affect it This book aims to effectively represent the current status of research on dangerous goods transport **Transportation of Hazardous**
