Resilience in Children, Families, and Communities Ray D. Peters, Bonnie Leadbeater, Robert J. McMahon, 2006-11-22 Despite the numerous benefits derived from major technological and medical innovations of the past century we continue to live in a world rife with significant social problems and challenges Children continue to be born into lives of poverty others must confront daily their parent s mental illness or substance abuse still others live amid chronic family discord or child abuse For some of these children life s difficulties become overwhelming Their enduring trauma can lead to a downward spiral until their behavioral and emotional problems become lifelong barriers to success and wellbeing Almost no one today would deny that the world is sometimes an inhospitable even dangerous place for our youth Yet most children even those living in high risk environments appear to persevere Some even flourish And this begs the question why in the face of such great odds do these children become survivors rather than casualties of their environments For many decades scholars have pursued answers to the mysteries of resilience Now having culled several decades of research findings the editors of this volume offer an in depth leading edge description and analysis of Resilience in Children Families and Communities Linking Context to Practice and Policy The book is divided into three readily accessible sections that both define the scope and limits of resilience as well as provide hands on programs that families neighborhoods and communities can implement In addition several chapters provide real life intervention strategies and social policies that can be readily put into practice The goal to enable children to develop more effective problem solving skills to help each child to improve his or her self image and to define ways in which role models can affect positive outcomes throughout each child s lifetime For researchers clinicians and students Resilience in Children Families and Communities Linking Context to Practice and Policy is an essential addition to their library It provides practical information to inform greater success in the effort to encourage

The Psychobiology of Trauma and Resilience Across the Lifespan Douglas L. Delahanty, 2008-09-05 Research has suggested that childhood experiences confer risk resilience for reactions to trauma in adulthood and predictors and correlates of posttraumatic stress disorder PTSD appear to differ developmentally Research in PTSD has typically been conducted by either child or adult researchers with relatively little overlap or communication between the two camps Developmental models of PTSD are necessary to fully understand the complex constellation of responses to trauma across the lifespan Such models can inform study designs and lead to novel developmentally appropriate interventions To this end this book is organized in such a way as to present and integrate research into child adult and older adult trauma samples in an attempt to culminate in a testable model of PTSD risk and resilience across the lifespan Each author incorporates a developmental slant to their individual chapter and the chapters are organized to highlight potential differences in our understanding of risk and resiliency between children and adults Initial chapters concerning pre and peri traumatic risk factors for PTSD lead into chapters reviewing specific risk and resilience factors in adults and children Additional chapters focus on the impact of childhood trauma on adult functioning and the biology of PTSD in children adults and older adults As PTSD rarely occurs in a pure form specific chapters focus on the impact of comorbid disorders in our understanding of PTSD and the final chapters consider both psychosocial and pharmacological treatments for PTSD in children and adults
