Embryology Oklahoma Notes:

Embryology Robert E. Coalson, 2012-12-06 This book was prepared to present an integrated review of selected topics in Human Embryology. It is designed specifically for students who have completed standard courses in the various anatomical disciplines and who wish to review the developmental history of the major organ systems. This book will provide medical students with a highly suitable review for Part I of the National Boards NBME Part I. R. E. Coalson ACKNOWLEDGMENTS I wish to acknowledge the invaluable assistance provided by my colleagues at the University of Oklahoma Health Sciences Center during the preparation of this review. I am grateful for the advice and patience of the Medical Editorial Department of Springer Verlag New York Inc and for the artistic talents of Mr Shawn Schlinke who prepared all of the illustrations. I particularly thank Dr Randall B Grubb who proofread and prepared the manuscript in final form.

Muscle Atrophy Junjie Xiao, 2018-11-02 The book addresses the development of muscle atrophy which can be caused by denervation, disuse, excessive fasting, aging and a variety of diseases including heart failure, chronic kidney diseases and cancers. Muscle atrophy reduces quality of life and increases morbidity and mortality worldwide. The book is divided into five parts, the first of which describes the general aspects of muscle atrophy including its characteristics, related economic and health burdens and the current clinical therapy. Secondly, basic aspects of muscle atrophy including the composition, structure and function of skeletal muscle, muscle changes in response to atrophy and experimental models are summarized. Thirdly, the book reviews the molecular mechanisms of muscle atrophy including protein degradation and synthesis pathways, noncoding RNAs, inflammatory signaling, oxidative stress, mitochondria signaling etc. Fourthly, it highlights the pathophysiological mechanisms of muscle atrophy in aging and disease. The book's fifth and final part covers the diagnosis, treatment strategies, promising agents and future prospects of muscle atrophy. The book will appeal to a broad readership including scientists, undergraduate and graduate students in medicine and cell biology.
