Local Disaster Resilience Ashley D. Ross, 2013-11-12 Since 2000 the Gulf Coast states Texas Louisiana Mississippi Alabama and Florida have experienced a series of hurricanes multiple floods and severe storms and one oil spill These disasters have not only been numerous but also devastating Response to and recovery from these unprecedented disasters has been fraught with missteps in management In efforts to avoid similar failures in the future government agencies and policy practitioners have looked to recast emergency management and community resilience has emerged as a way for to better prevent manage and recover from these disasters How is disaster resilience perceived by local government officials and translated into their disaster response and recovery efforts Ashley D Ross systematically explores and measures disaster resilience across the Gulf Coast to gain a better understanding of how resilience in concept is translated into disaster management practices particularly on the local government level In doing so she presents disaster resilience theory to the Gulf Coast using existing data to create county level baseline indicators of Gulf Coast disaster resilience and an original survey of county emergency managers and elected municipal officials in 60 counties and 120 municipalities across the Gulf States The findings of the original survey measure the disaster resilience perceptions held by local government officials which are examined to identify commonalities and differences across the set of cases Additional analyses compare these perceptions to objective baseline indicators of disaster resilience to assess how perceptions align with resilience realities Local Disaster Resilience not only fills a critical gap in the literature by applying existing theories and models to a region that has experienced the worst disasters the United States has faced in the past decade but it can also be used as a tool to advance our knowledge of disasters in an interdisciplinary manner

Handbook of Disaster and Emergency Management. First Edition Amir Khorram-Manesh, 2017-10-10 We propose here a comprehensive educational program based

on the best available evidence to date drawn from recent publications intended to impart the knowledge skills and abilities necessary for the role of crisis manager We expect this program to enhance the intercultural and interagency performance across the Disaster Management DM cycle Here Intercultural does not refer to different nations and cultural backgrounds but rather to working cultures within diverse agencies Since communication and information shortcomings are the most common reason for failed DM this educational program focuses heavily on collaboration and interoperability between trained professionals involved in disaster response to ensure that they understand the need for collaboration and are aware of each other's limitations and possibilities The aim of programs such as this is not to re educate people in respect to their profession area of expertise but rather to train them in elements specific to DM and ways in which they can apply their existing knowledge and professional expertise in the disaster context Such multidisciplinary programs cover all disaster phases accommodate the needs of each organization and offer a safe environment where participants are able to learn by doing in an interactive environment vertically within their own organization and horizontally together with other organizations by focusing on shared training cooperation and intercultural understanding Such programs bring some degree of standardization and offer a thorough evaluation of participants and the program by using evidence based scientific methods One important part of the program is to offer a standardized handbook in which all necessary information is gathered This is not intended as a substitute for reference books but it is intended to make the information accessible and easy to learn so that the information can be combined with the practical parts of the education

Disaster Research and the Second Environmental Crisis James Kendra, Scott G. Knowles, Tricia Wachtendorf, 2019-04-04 The 50th anniversary of the Disaster Research Center of the University of Delaware provoked a discussion of the field's background its accomplishments and its future directions Participants representing many disciplines brought new methods to bear on perennial problems relevant to effective disaster management and policy formation However new concerns were raised stemming from the fact that we live today in a globally unfolding environmental crisis every bit as pressing and worrisome as that of the 1960s when the Disaster Research center was founded This volume brings together ideas of participants from that workshop as well as other contributors Topics include the history and evolution of disaster research innovations in disaster management disaster policy and ethical considerations of disaster research Readers interested in science and technology public policy community action and the evolution of the social sciences will find much of interest in this collection

Handbook of Crisis and Emergency Management Ali Farazmand, 2001-06-22 Including contributions from sixty international authors this book examines emergency responses to environmental dangers such as chemical fires hazardous material and oil spills nuclear reactor accidents and earthquakes and crises in the environment global public service and politics It covers a wide range of international issues and topics using various analyses including critical descriptive empirical quantitative and normative methods The book discusses approaches to natural disasters resolutions to cultural religious and political tensions terrorism

and the potential use of biological chemical and nuclear weapons the role of crisis public relations and more The Distributed Functions of Emergency Management and Homeland Security David A. McEntire, 2023-07-19 The Distributed Functions of Emergency Management and Homeland Security outlines the roles and responsibilities of various individuals and agencies involved in homeland security and all aspects of emergency management Each chapter focuses on the practical and applied aspects of a range of public servants in various departments and the organizations that they represent Rather than presenting a theoretical exploration alone the book examines the practical knowledge and hands on skills related to various functions and how their decisions and actions play into the larger framework of safety and security in the public private and nonprofit sectors Every professional has a unique and integral part to play in fulfilling their roles and obligations whether it be in relation to prevention mitigation preparedness response or recovery operations Personnel that frequently come to mind in such scenarios include emergency managers geographers and land use planners EMTs and paramedics fire fighters police officers public health officials nurses public administrators and public information officers And while these individuals are integral to homeland security and emergency management there are other professionals that also perform essential duties that while they aren't first to mind are vital to efforts relating to terrorism and disasters this includes pilots in the aviation sector the military attorneys psychologists and forensic professionals serving in pathology DNA and dentistry roles Chapters provide a holistic rendering of the homeland security and emergency management landscape to present all these various professional capabilities and contributions This includes how current functions are coordinated as well as how future efforts might change relative to a more proactive all hazards and holistic approach As such the book will be a useful resource for students and practitioners to understand the dynamic professions and various disciplines and fields that impact disaster and terrorism preparedness and response capabilities Climate Change and Disaster Risk Management Walter Leal Filho, 2012-08-10 There has been some degree of reluctance in the past to consider disaster risk management within the mainstream of adaptation to climate variability and climate change However there is now wide recognition of the need to incorporate disaster risk management concerns in dealing with such phenomena There is also a growing awareness of the necessity for a multi sectoral approach in managing the effects of climate variability and climate change since this can lead to a significant reduction of risk This book presents the latest findings from scientific research on climate variation climate change and their links with disaster risk management It showcases projects and other initiatives in this field that are being undertaken in both industrialised and developing countries by universities and scientific institutions government bodies national and international agencies NGOs and other stakeholders Finally it discusses current and future challenges identifying opportunities and highlighting the still unrealised potential for promoting better understanding of the connections between climate variation climate change and disaster risk management worldwide **Facing Hazards and Disasters** National Research Council, Division on Earth and Life Studies, Committee on Disaster Research in the Social Sciences: Future

Challenges and Opportunities, 2006-08-10 Social science research conducted since the late 1970s has contributed greatly to society's ability to mitigate and adapt to natural technological and willful disasters. However, as evidenced by Hurricane Katrina, the Indian Ocean tsunami, the September 11, 2001 terrorist attacks on the United States, and other recent events, hazards and disaster research and its application could be improved greatly. In particular, more studies should be pursued that compare how the characteristics of different types of events, including predictability, forewarning, magnitude, and duration of impact, affect societal vulnerability and response. This book includes more than thirty recommendations for the hazards and disaster community. **Disciplines, Disasters and Emergency Management** David A. McEntire, 2007

Disasters such as the 9/11 terrorist attacks, the Indian Ocean Tsunami, and Hurricane Katrina illustrate the salience and complexity of disasters. Both scholars and practitioners therefore agree that we must take a more proactive and holistic approach to emergency management, which should logically be derived from a sound understanding of the academic literature and the most pressing concerns facing professionals in the field today. *Disciplines, Disasters and Emergency Management* reviews what is known about catastrophic events from the standpoint of various academic areas of study. The introduction *An Assessment of Natural Hazards and Disasters in Canada* David Etkin, C.E. Haque, Gregory R.

Brooks, 2003-04-30 The problems and issues of natural hazards and disasters, both globally and in Canada, are becoming increasingly important since the costs of extreme natural events have been escalating and significant vulnerabilities exist in Canadian society. Without thoughtful and effective mitigation, these costs and human suffering are likely to continue to increase. An assessment of knowledge, research, and practice in risk, hazards, and disasters fields is a fundamental step towards the goal of prevention and mitigation. This book on natural hazards and disasters in Canada is the first comprehensive interdisciplinary publication on this subject and is the result of a national assessment on this topic. A variety of papers from the physical and social sciences explores both the risks associated with these hazards and adaptive strategies that can be used to reduce those risks. Audience: This excellent collection of papers is intended for academics, professionals, and practitioners involved in hazard reduction activities who wish to obtain a better understanding of Canadian natural hazards.
