probably an assistant teacher near the end of his time there. Subjects learned at school notably included technical drawing and mathematics with some applications of those subjects to land surveying. He was hired as a draftsman by the Ordnance Survey of Ireland in his late teens in 1839 and moved to work for the Ordnance Survey for Great Britain in 1842. In the decade of the 1840s a railroad building boom was in progress and Tyndall's land surveying experience was valuable and in demand by the railway companies. Between 1844 and 1847 he was lucratively employed in railway construction planning. In 1847 Tyndall opted to become a mathematics and surveying teacher at a boarding school, Queenwood College in Hampshire. Recalling this decision later he wrote the desire to grow intellectually did not forsake me and when railway work slackened I accepted in 1847 a post as master in Queenwood College.³ Another recently arrived young teacher at Queenwood was Edward Frankland who had previously worked as a chemical laboratory assistant for the British Geological Survey. Frankland and Tyndall became good friends. On the strength of Frankland's prior knowledge they decided to go to Germany to further their education in science. Among other things Frankland knew that certain German universities were ahead of any in Britain in experimental chemistry and physics. British universities were still focused on classics and mathematics and not laboratory science.

The Experimental Researchers of Faraday are so voluminous their descriptions are so detailed and their wealth of illustration is so great as to render it a heavy labour to master them. The multiplication of proofs necessary and interesting when the new truths had to be established are however less needful now when these truths have become household words in science.
