Dictionary of Electronics and Electrical Engineering Seiichi Ishibashi,2012-12-06 The first edition of this dictionary was published in 1964 and the revised second edition appeared in 1968 Since then electrical engineering has made great progress and has enlarged rapidly along with its associated fields Accordingly the terms required for electrical engineering have greatly increased Therefore the publishers Ohmsha Ltd decided to publish this extensively revised and enlarged third edition The original editor Dr Yuichi Ishibashi who is my father devoted great energy to compiling revisions after the appearance of the second edition but he passed away in 1969 leaving his work in the form of a mass of manuscript cards Since my speciality is the same as my father s Mr Sato the managing director of Ohmsha Ltd approached me with his request to compile this third edition to which I agreed to bring my father s efforts to fruition Following the trend of the first and second editions in addition to the customary technical terms of electrical engineering electronics and communications this third edition attempts to include relevant terms from the basic sciences of mathematics physics and chemistry as well as from automation data processing instrumentation nucleonics mechanical engineering civil engineering architecture and economics Also I have tried to include as many verbs adjectives and adverbs that appear frequently in general engineering literature as possible The result is that this third edition contains over 42 000 vocabulary entries

Guide to Reference Material Albert John Walford,1966

Foreign-language and English Dictionaries in the Physical Sciences and Engineering Tibor W. Marton,1964 The bibliography lists over 2800 unilingual bilingual and polyglot dictionaries glossaries and encyclopedias in the physical sciences engineering and technology published during the past twelve years The majority of the titles cited have English as the source or target language or are dictionaries giving definitions in English The bibliographic entries are arranged in 49 subject classes within each subject the entries are listed alphabetically by language and within each language group by author Forty seven foreign languages are represented in the compilation Lists of abbreviations and reference sources and detailed author language and subject indexes complement the publication

Elsevier's Dictionary of Geography Vladimir Kotlyakov,Anna Komarova,2006-12-20 Geography is a system of highly developed sciences about the environment Geographical science embracing the study of the Earth s physical phenomena people and their economic activities has always been in need of an extensive terminology Geographical terms are related to the terms of natural sciences physics chemistry biology geology etc and humanities history economics sociology etc since geography is based on these fundamental subjects Geography includes a number of disciplines and subdivisions which appeared along with the development of the science In spite of being very different geographical disciplines have some common tools of investigation which is maps comparative method of exploration remote sensing geoinformation systems Today very well developed terminologies of all the specialist fields of geography and related subjects exist in the main world languages However they are not always well correlated Nowadays geographical

terminology requires unification and international correlation more than ever before Hence the idea of compiling a multilingual polydisciplinary dictionary The Dictionary consists of the basic table of terms arranged according to the order of the English alphabet with each term numbered Each entry consists of the term in English and its equivalents in Russian French German Spanish Short definitions of terms are given in English and in Russian The terms are supplied with the necessary grammar labels such as gender of nouns plural number etc The Dictionary combines two functions that of a defining dictionary and that of a bilingual dictionary These two functions are basically contradictory because usually the defining dictionary is aimed at giving one meaning of the word which is the main and essential one while the bilingual dictionary tries to give different equivalents of a given word in the other language in order to supply the user with maximum possible translations differing in the shades of meanings thus giving him the possibility to choose the appropriate word But in our Dictionary we intentionally decided to combine the two functions defining and multilingual because a short definition of the term and equivalents in other languages help to achieve our main aim which consists in showing the basic geographical terminology and harmonizing it in several languages Having this into consideration we deliberately mixed two types of dictionaries in one Organized alphabetically via English Provides short definition of geographical terms in English and Russian Includes multilingual translation of terms from English to Russian French German Spanish
