infrastructure has always depended on the timing of investments and the specific ways that cities have gained access to necessary capital. Drawing on urban mobility history and global city theory, this book delves into the details of the big moves that have affected transport infrastructure in major Canadian cities. Knowing where urban development will head in the twenty-first century requires understanding how cities' major mobility infrastructures were built. *Big Moves* explains the shape of Canada's three biggest cities and how their mix of expressways and rapid transit emerged. Applications of Rapid Prototyping Technology in Modern Engineering Md Enamul Hoque, 2011-09-22. Rapid prototyping (RP) technology has been widely known and appreciated due to its flexible and customized manufacturing capabilities. The widely studied RP techniques include stereolithography apparatus (SLA), selective laser sintering (SLS), three-dimensional printing (3DP), fused deposition modeling (FDM), 3D plotting, solid ground curing (SGC), multiphase jet solidification (MJS), laminated object manufacturing (LOM). Different techniques are associated with different materials and/or processing principles and thus are devoted to specific applications. RP technology has no longer been only for prototype building; rather, it has been extended for real industrial manufacturing solutions. Today, the RP technology has contributed to almost all engineering areas that include mechanical, materials, industrial, aerospace, electrical, and most recently, biomedical engineering. This book aims to present the advanced development of RP technologies in various engineering areas as the solutions to the real-world engineering problems.
