The Emergence of Humans Patricia J. Ash,David J. Robinson,2011-09-20 The Emergence of Humans is an accessible informative introduction to the scientific study of human evolution It takes the reader through time following the emergence of the modern human species *Homo sapiens* from primate roots Acknowledging the controversy surrounding the interpretation of the fossil record the authors present a balanced approach in an effort to do justice to different views Each chapter covers a significant time period of evolutionary history and includes relevant techniques from other disciplines that have applications to the field of human evolution Self assessment questions linked to learning outcomes are provided for each chapter together with further reading and reference to key sources in the primary literature The book will thus be effective both as a conventional textbook and for independent study Written by two authors with a wealth of teaching experience The Emergence of Humans will prove invaluable to students in the biological and natural sciences needing a clear balanced introduction to the study of human evolution

Anticipation, Sustainability, Futures and Human Extinction Bruce E. Tonn,2021-05-16 This book considers the philosophical underpinnings policy foundations institutional innovations and

deep cultural changes needed to ensure that humanity has the best chance of surviving and flourishing into the very distant future. Anticipation of threats to the sustainability of human civilization needs to encompass time periods that span not just decades but millennia. All existential risks need to be jointly assessed as opposed to addressing risks such as climate change and pandemics separately. Exploring the potential events that are likely to cause the biggest risks as well as asking why we should even desire to thrive into the distant future, this work looks at the biggest picture possible in order to argue that futures oriented decision making ought to be a permanent aspect of human society and futures oriented policy making must take precedent over the day to day policy making of current generations in times of great peril. The book concludes with a discourse on the truly fundamental bottom up changes needed in our personal psychologies and culture to support these top down recommendations. This book is of great interest to philosophers, policy analysts, political scientists, economists, psychologists, planners and theologians.

Ice Age Extinction Jim Snook, 2008. The author explores the causes of Earth's cyclical temperature changes and shows how those temperature shifts touch off a chain of events in the atmosphere, in the oceans and on land. Cold temperature was the trigger and the resultant reduction in carbon dioxide, he argues, was the bullet that killed off so many species. The re-warming released more carbon dioxide into the atmosphere and fueled a resurgence. This book provides significant long term background information to put global warming into perspective. In addition, the author describes the human responses to increases in atmospheric carbon dioxide after the last ice age and in the last 150 years. Near the end of the last ice age, atmospheric carbon dioxide was about half of what it is today. Due to the lack of carbon dioxide, most of the vegetation disappeared from the middle and high latitudes. Without plants to eat, many large animals became extinct. North America lost three fourths of its large animals, including the woolly mammoth, mastodon, and saber tooth cat. Humans too had little to eat in these areas and their population declined dramatically. The book then explains how and why atmospheric carbon dioxide increased by about 50% after the last ice age ended, encouraging a population explosion among plants, animals, and humans, all of which then migrated into many previously barren areas. More recently, the 28% increase in atmospheric carbon dioxide in the last 150 years has caused a six fold increase in the human population. Changes in the next 300 years will reverse some of the current trends. This book has value for anyone interested in the ice age, extinction, glaciers, the glacial cycle, the atmosphere, and oceans, and the past and future of plants, animals, and humans. It provides long term information on atmospheric carbon dioxide, global warming, and cooling.

Saving Humanity Jiaqi Hu, 2018-11-01. Our world faces threats on many fronts: terrorism, environmental and natural disasters, and pandemics, to name just a few. In light of these growing dangers, we must ask: Is the total annihilation of the human race inevitable, or can we be saved? With a breadth and depth of knowledge that serves as a foundation to his proposals, along with almost forty years of research, *Saving Humanity* addresses these questions and assures readers that hope for human survival and happiness still exists, but only if we unite under a common purpose. Chinese scholar and scientist Jiaqi Hu proposes that

humanity won't be wiped out by war or nuclear weapons famine or climate change. Instead the chief culprit raging against our survival is technology. If technology continues to grow and develop, human beings could vanish from the earth in less than two or three hundred years. Hu's solution to this problem will challenge and inspire readers as they realize that the future of humanity rests in our hands now. Devoting all of his time to his mission of spreading this message of hope and urgency, Jiaqi Hu is reaching out to leaders and people of influence who can be the giants to lead the charge of saving humanity. Please read and share, spreading the word and raising up giants.

Human Origins, 2011 Describes how mapping the human genome has aided paleoanthropologists in their study of ancient bones used to explore human origins from the earliest humans bipedal apes up to Martin Pickford's Millennium Man. [Ancestral DNA, Human Origins, and Migrations](#) Rene J. Herrera, Ralph Garcia-Bertrand, 2018-06-13 [Ancestral DNA, Human Origins, and Migrations](#) describes the genesis of humans in Africa and the subsequent story of how our species migrated to every corner of the globe. Different phases of this journey are presented in an integrative format with information from a number of disciplines including population genetics, evolution, anthropology, archaeology, climatology, linguistics, art, music, folklore, and history. This unique approach weaves a story that has synergistic impact in the clarity and level of understanding that will appeal to those researching, studying, and interested in population genetics, evolutionary biology, human migrations, and the beginnings of our species. Integrates research and information from the fields of genetics, evolution, anthropology, archaeology, climatology, linguistics, art, music, folklore, and history among others. Presents the content in an entertaining and synergistic style to facilitate a deep understanding of human population genetics. Informs on the origins and recent evolution of our species in an approachable manner.

Red and Yellow, Black and Brown Joanne L. Rondilla, Rudy P. Guevarra, Paul Spickard, 2017-07-03 *Red and Yellow, Black and Brown* gathers together life stories and analysis by twelve contributors who express and seek to understand the often very different dynamics that exist for mixed race people who are not part white. The chapters focus on the social, psychological, and political situations of mixed race people who have links to two or more peoples of color: Chinese and Mexican, Asian and Black, Native American and African American, South Asian and Filipino, Black and Latino, and so on. *Red and Yellow, Black and Brown* addresses questions surrounding the meanings and communication of racial identities in dual or multiple minority situations, and the editors highlight the theoretical implications of this fresh approach to racial studies.
