past shed light on our environmental efforts and how does the present influence our environmental goals Can we predict the future of restoration This book explores how a consideration of time and history can improve the practice of restoration There is a past of restoration as well as past assumptions about restoration and such assumptions have political and social implications Governments around the world are willing to spend billions on restoration projects in the Everglades along the Rhine River in the South China Sea without acknowledging that former generations have already wrestled with repairing damaged ecosystems that there have been many kinds of former ecosystems and that there are many former ways of understanding such systems This book aims to put the dimension of time back into our understanding of environmental efforts Historic ecosystems can serve as models for our restorative efforts if we can just describe such ecosystems What conditions should be brought back and do such conditions represent new natures or better pasts A collective answer is given in these pages and it is not a unified answer
